sven@gordsven.com (Sven Franklyn Weil) wrote in message news:<biqrd6$lpn$1@xuxa.iecc.com>...

> I thought Catholic Radio Network was long gone. That's one system I was glad when it went belly up. They sold their Chicago station to Radio Unica I think -- or was it One-On-One Sports (now Sporting News Radio)?

The actual trail was this: CRN sold the station to Fred Eyechaner's Metroweb (which also owns mostly-simulcast brokered stations WSBC on the Northwest side and WCFJ in Chicago Heights and until last year owned UPN station WPWR, which is now owned by Fox), who then LMAd the station to One-on-One/Sporting News Radio.

WSBC/WCFJ's most notable non-foreign language brokered show is "Miles Ahead," an afternoon drive mainstream jazz show hosted by Neil Tesser and Mark Ruffin, two former WBEZ jazz jocks who got into programming arguments with research-loving jazz PD Chris Heim and left the station. (Heim seems to favor mostly ballads and singers over uptempo songs and anything mildly avant-garde and seems to use research results to prove her beliefs.) The show's now been running for two years and even a solid advertising list (mostly record companies and jazz clubs, but it's still pretty good for a music show on AM with a genre considered a limited audience). Its web site is http://www.milesaheadjazz.com. They stream their programming 24/7 through Live 365.

Muzak in the US provides similarly long CDs (which, as best as I've been able to determine, are *not* in MP3 format), also requiring a custom CD player.

As recently as 1999-2000 or so Muzak was providing their proprietary CD's and players to retail outlets such as Spencer's (which is where I was familiar with the equipment--we had to put in that month's Muzak CD in, it'd play for around 6-8 hours, mostly dance and novelty "Weird Al" type stuff).

I had always wondered, as had other employees, specifically what format the CDs were in (apparently employees had actually attempted to sneak them home to play, without success--the tracking was off, as I recall; never had access to a CD diagnostics util, and it'd probably have been impossible without one of the proprietary Muzak players anyways).  I'm not even sure they were standard Red Book CD's at all, to be honest...

I'd expect the Muzak systems were similar if not identical, and I'd be surprised if the Muzak "CD" systems weren't still in place in a lot of places where you couldn't have a ton of satellite systems up (for example, malls with many retail stores)...

Good demonstrations.

To my ear, it sounds like the CFCO broadcasts sound like they have a better

frequency response.  Is Canada running under the same 10kHz limit that the
USA is?

At a lot of the sites I've visited, this used to be the case but has changed in the not-too-distant past (or is scheduled to change soon). A lot of the effort is due to IBOC, but even in its absence I've been told that the advantages even of the ``Destiny'' over the original DX-50 are sufficient to make it worth stations' while to buy one and move their DX-50s to standby status.  (It's a great racket for Harris, certainly....)

Ten years ago it was pretty common to see a DX-50 as the main tx with a Gates or Continental tube backup, but now -- among the full-timers at least -- the usual state is two solid-state transmitters.  Some stations (particularly the ex-I-As) made a substantial investment in solid-state transmitters and bought a pair of DX-50s when they came out, or have a DX-50 and a 3DX-50, and alternate on a weekly or monthly basis.

Visit 980-Washington the same day as WTOP.  They has 3 solid state rigs. A
Harris DX=50 for days, a Nautel 5 kW for night, and a Nautel 10 kW for
spare. Greater Media had done almost everything in at least triplicate.  The
station was sold shortly thereafter and I wonder about the present
situation.

August 29, 2003

Los Angeles' KPLS Sells -- Home to Putnam, Imus, Boortz

The Southern California radio station that features broadcasting veterans George Putnam, Don Imus and Neal Boortz is being sold to a new Hispanic radio network, according to filings made Thursday with the FCC.

Subject to federal approval, the 50,000 watt KPLS (830 AM), based in the heart of Orange County and covering much of Los Angeles, will be purchased by L.A.-based RadioVisa LLC.

Radio Visa is headed by Stephen Lehman, who founded Premiere Networks -- the home of talk radio giants Rush Limbaugh and Dr. Laura Schlesinger. The conservative talk station is being sold by the Catholic Radio Network, which once planned to use KPLS as the anchor station for its defunct Catholic Family Radio Network. Catholic Radio Network has been backed by Dominos pizza magnate Tom Monaghan.

The change of station ownership may not happen quickly. It takes the FCC an average of six months to approve the sale of a radio station, although its approval timetable has lengthened recently because of protests and confusion over the FCC's new media ownership rules.

A top talk radio expert tells NewsMax that Putnam, Imus and other KPLS personalities should remain on the air awhile longer as the station moves to a new Latin format.

The sale price for KPLS is reported to be $38 million.

I am looking for a tape or audio file of Paul Harvey's "Rest of The
Story" program  from last Thursday ( Aug 28)and Monday Sept. 1 thru Wed
Sep 3. Can trade for
other shows over past year. These are NOT on Paul Harvey's website and

blanked out on most streaming audio radio stations. NOTE: Please REMOVE the "NS" from my email to reply. Thanks.

> tuner that has to be then connected to a stand-alone amplifier so they
> can listen to Michael Savage or Rush Limbaugh in stereo?

The Fanfare is a reference-quality tuner.  The model with AM Stereo is an update to their similarly-priced FM-only tuner.  Fanfare has been selling these high-quality, high-priced tuners for years and they surely have been able to attract a sufficient amount of customers in order to sustain their business.  Their products are not

"consumer-grade", but rather examples of some of the highest
performance that can be achieved with current analog-based AM Stereo
and FM Stereo receiver technology.

> But aren't there still a lot of tube 50s in backup role?  A couple of years
> ago WTOP still had a tube rig as backup.

710 WOR in New York City had a Continental 317C as their main
transmitter until about 1997, when they replaced it with a Harris
DX-50.  The Continental is now their backup transmitter.  They use it
weekly during Joe Franklin's show -- the last music show left on WOR.

WOR also used the Continental during that big blackout a few weeks
ago.  They chose it over the Harris because it's less sensitive to
power fluctuations.  (Northeastern NJ had its power restored more
quickly than the City itself, but people reported voltage swings of
their household AC all the way from 50 to 148 volts, and I doubt the
three-phase power at WOR's transmitter site was any better controlled
at the time.)

```

Yesterday (Wednesday) at 10 am, KKWV(FM) dropped its reggae-flavored soul/AC format in favor of a simulcast of San Jose-based soft-AC station KBAY(FM). Both stations are owned by Infinity.

"The Wave" received some unwanted attention earlier this summer when a New York Times articles called it out as an example of an underperforming station owned by Infinity. There was some speculation that Infinity's "Blink" format on WNEW(FM) New York might be imported onto KKWV. However, with KLLC(FM)'s modern-AC format, it would seem that such a move would cause Infinity to be competing for its own listeners.

The simulcast appears to be permanent, in as much as anything in radio is permanent, of course, with the station's promos and web site both promoting the fact that KBAY is now available both in San Jose and in San Francisco. Infinity has also reserved the KBAA call letters, presumably for use on one of the two stations.

There is precedent for a two-station FM simulcast in the Bay Area. KFOG has simulcast for five years on South Bay station KFFG. Between the wide geographic expanse of the market and the relatively moderate power levels of most FMs, it is difficult for a single FM station, even one that is centrally located, to cover the entire market or even more than half of it. At the same time, the simulcasts are reducing the number of stations that are programming primarily for San Jose and other South Bay cities.

In addition, the KKWV signal is notorious for coverage problems due to a rather odd location on a hill in the East Bay city of San Leandro. Because of the terrain in the area, the station can't even be heard clearly in many parts of Oakland, even in those areas adjacent to San Leandro.

Oh, now that is interesting. Is there that much of a difference in the sound of these transmitters?

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

Can anyone tell me if radio listenership goes up and down seasonally?
Is there one time of year when more people traditionally listen, and
another time of year when less people traditionally listen?

Any info you can provide would be greatly appreciated.

Thanks!

Gregg

Here's notice of an upcoming DX test...

PLEASE NOTE: Even if you don't hear a test, be sure and drop a card, letter, or e-mail to the station personnel, thanking them for going to the trouble to run a test!

Saturday, October 4, 2003 - WJTO-730, Bath, ME will conduct an equipment test from 12:00 midnight-1:00am ELT, consisting of Morse code IDs and nostalgia music. The test will run at a power of 1000 W, non-directional. Also, this test is automated and run from Bob Bittner's home.

Reception reports may be sent to:

Bob Bittner
WJTO-AM
P.O. Box 747
Rowley,Massachusetts  01969

(Arranged by Ron Musco for the NRC CPC)

Also, if you hear a test, PLEASE, PLEASE let me know, via either e-mail or in rec.radio.shortwave! And if you send a reception report to
a station, please remember to include return postage with your report...

Lynn.

Amateur Radio Newsline=E2=84=A2 Report 1360=E2=80=93 September 5 2003

Amateur Radio Newsline report number 1360 with a release date of Friday,
September 5th 2003 to follow in 5-4-3-2-1.  =20
=20
The following is a Q-S-T.  Pro-code fights back.  A petition to retain Mo=
rse
code testing is filed with the FCC and others are reportedly on the way. =
 Find
out the details on Amateur Radio Newsline report number 1360 coming your =
way
right now.

(Billboard Cart Here)=20
=20
**

RESTRUCTURING: PRO CODE PETITION FLED WITH THE FCC

The proponents of retaining Morse testing for all candidates for a United
States Amateur License with high frequency operating priveleges are strik=
ing
back.  This, with a petition that not only asks the F-C-C to retain the 5=
 word
per minute C-W exam, but to also require that Extra class pass a 12 word =
per
minute test.  And the organization that I sponsoring the measure also wan=
ts
written exams stiffened as well.  Amateur Radio Newsline=E2=80=99s David =
Black,
KB4KCH, has more on this attempt to row against the deregulatory tide:

--

For the past couple of months, more and more countries have been steering

toward making amateur radio code-free. That follows the July abolition of=
 Morse
code testing by the World Radiocommunications Conference.  In the United
States, the Federal Communications Commission has before it six petitions
essentially seeking to remove Morse code from amateur radio in the U-S.=20
Supporters of the code have been quiet--until now.  A group called FISTS-=
-said
to be the largest code advocacy organization in the world--is leading an =
effort
to make Morse code a more prominent part of ham radio and the licensing
process.

FISTS is an international Morse code preservation society based in the Un=
ited
Kingdom with chapters world-wide. Its stated objective is to further the =
use of
the Morse code in Amateur Radio communications. The group's north America=
n
chapter has delivered a detailed rule-making request to the FCC that seek=
s more
than just making sure that Morse code testing is retained.=20

FISTS asks the Commission to raise the standards in other areas of testin=
g,
too.  Nancy Kott, WZ8C, is U-S Chapter Manager for FISTS, and is Editor o=
f
Worldradio Magazine.  She wrote the rule making request.  Among the propo=
sals
are keeping code as a mandatory testing element for the General and Extra=
 class
licenses.  General licenses would require 5 words per minute and Extra cl=
ass
licenses would require 12 word per minute code proficiency.

FISTS says passing a 5 word per minute code test is no hindrance to peopl=
e
wanting to upgrade, and cites the large number of Technician class operat=
ors
upgrading to General as proof.=20

FISTS also says that those aiming for the Extra license should be able to
demonstrate Morse code skill at 12 words per minute.

Today's written exams are too easy.  At least, that's what FISTS seems to
suggest in noting that the FCC sought comments before amateur radio's
restructuring about whether fewer morse code requirements should be offse=
t by
increased technical content on written questions.  FISTS notes that nearl=
y
every commenter said yes, but the Commission's Report and Order failed to
address the issue.

FISTS says the commission has a chance now to make General class written =

tests
equivalent to the Advanced class written tests before restructuring. In o=
ther
words, go back to the way it was, with tests that are harder and more tho=
rough.

FISTS wants the Extra class exam to be more thorough, as well. It wants t=
he FCC
to require written knowledge of circuit design, information theory, digit=
al
methods and encoding schemes and software radio.  FISTS says candidates f=
or the
Extra class ticket need to show a more thorough knowledge of propagation =
and
geophysics than current tests require.

For the Technician class operator, FISTS suggests merging the Technician =
and
Tech-Plus classes and not require a Morse code exam. But FISTS says techn=
ical
content should be emphasized and should include the digital modes.  FISTS
advocates extending Technician Class privileges to include digital modes =
within
the current Novice subbands, which it says should be kept.  The group say=
s that
would let Technician Class operators participate in the explosive growth =
in
digital applications occurring within the Amateur Radio Service on the hi=
gh
frequency bands.

But when it comes to giving Technicians even limited phone privileges on =
HF,
FISTS says no. The group says the rush of upgrades by Technicians to high=
er
classes following restructuring indicates that the barrier between Genera=
l and
Technician classes has already been lowered enough without needing to go =
any
further.

FISTS also suggests one other big change and that involves taking license
tests.  Right now, if you fail an exam, you can go back and try again at =
the
same session.  FISTS is asking the Commission to impose a 24-hour waiting
period before being able re-take either a failed written test or a failed=
 code
test.
For the Amateur Radio Newsline, I'm David Black, KB4KCH.

--

There=E2=80=99s 14 pages to the FISTS filing.  You can read it on-line at

ftp://ftp.qsl.net/pub/n1ea/FIST_FCC_Petition_8-30-303.pdf.  As we go to a=
ir, no
Rule Making designation has been assigned to the FISTS request.=20
(ARNewsline(tm))

## RESTRUCTURING:  ACA PAPER SUGGESTS TOTAL RESTRUCTURING OF VK HAM RADIO

Meantime, down-under the Australian Communications Authority has surprise=
d that
nations ham radio community with a proposal to totally restructure that n=
ations
Amateur Radio service.   Jim Linton, VK3PC, has the rest of the story.

--
Radical changes are being proposed for the Amateur Service in the  just i=
ssued
ACA discussion paper entitled "A Review of Amateur Service  Regulation.=E2=
=80=9D  The
paper is sure to stimulate debate, particularly its reference to  interfe=
rence
experienced by domestic television and radio receivers,  and a suggestion=
 that
radio amateurs should take full responsibility to  resolve these problems.

A major purpose of the paper is to discuss the implementation of the  cha=
nges
arising out of the World Radiocommunications Conference held in Geneva th=
is
year.  These changes include the end of mandatory Morse code tests for am=
ateur
licences, amateur callsigns, third party traffic, communications  during
disasters, and reciprocal and visitor licensing.

The ACA, as expected, has also taken the opportunity to discuss  restruct=
uring
of amateur licensing, the regulatory controls and  administration of the
Amateur Service in Australia.   The paper acknowledges the WIA's proposal=
 for a
new entry level licence, and the potential for it to replace the current =
Novice
licence.   It discusses restructuring of the current system of seven diff=
erent
amateur licence types (five operator, plus repeater and beacon), to creat=
e only
two operator licence types - Unrestricted and Novice.

On a positive note the paper hints that the removal of Morse code  tests =
for
amateur licences may occur earlier than the ACA's current timetable.  It =
states
that if there is sufficient public support, the code  requirement could b=

e
removed prior to its proposed implementation of  regulatory changes flowi=
ng
from its discussion paper in early 2005.

In a controversial proposal, the ACA is to consider the introduction of a=
 "no
interference" policy for radio amateurs.  It states "The operation of an
amateur station, which is essentially a hobby, should not disturb another
person's activities, such as television viewing or radio listening, or af=
fect
commercial activities."  Should the "no interference" policy be introduce=
d, it
would be a  major shift from the current ACA policy that provides for a s=
hared=20
responsibility between the radio amateur and his neighbour for the resolu=
tion
of an interference problem. =20

 To make it clear, the ACA explains "This would mean that an amateur must=
 not
cause interference to other radiocommunication services. If causing
interference to another service, the obligation will be on the amateur to
resolve the problem."

--

The Australian Communications Authority has set a deadline of October 31s=
t as
the last day for hams to file responses to its  discussion paper.  The 50=
-page
discussion paper can be downloaded from www.wiavic.org.au/news or
www.wia.org.au/vk4  (Q-News)

**

## RADIO LAW:  THE ACADEMY OF MODEL AERONAUTICS SAYS NO TO BPL

Back here in the United States, word that the Academy of Model Aeronautic=
s is
saying no to the introduction of Broadband Over Powerline or B-P-L techno=
logy.=20
In Reply Comments to the FCC, the 175,000 member aviation hobby group say=
s that
it is concerned that B-P-L deployment could cause harmful interference to=
 users
of Radio Controlled  systems and pose a safety hazard to aeromodeling equ=
ipment
and spectators.

In its filing the A-M-A says that Broadband Over Powerline holds the pote=

ntial
to severely interfere with radio controlled models which operate in or ne=
ar the
27, 50, 72 and 75 MHz bands.  All of these fall within the 1 point 7 thro=
ugh 80
MHz spectrum where the FCC proposes to permit B-P-L to operate. =20

To the A-M-A this means that Broadband Over Powerline may not yield the b=
enign
environment the Commission expects.  Also, that it could result in an
unanticipated negative impact on Radio Controlled operations.  And that=E2=
=80=99s
what it has told the FCC.  (AMA release)

## RADIO LAW:  MARYLAND COUNTY FILES RFI CONTROL APEAL TO FCC

Still with regulatory news, the CGC Communicator reports that Anne Arunde=
l
County, Maryland has filed an Application for Review before the full
Commission.  This, in the hope of reversing an order by the FCC=E2=80=99s=
 Wireless
Telecommunications Bureau that prevents the County from entering into the=
 radio
frequency interference control business through zoning laws.  Laws that c=
ould
even impact on ham radio, C-B and GMRS operators.=20

In 2001 Anne Arundel County, Maryland, had enacted legislation requiring =
that,
prior to receiving a County zoning certificate, owners and users of any s=
ort of
telecommunications facility had to show that their installation would not
degrade or interfere with the County's public safety communications syste=
ms.=20
The ordinance also permitted the County to revoke a zoning certificate wh=
ere
degradation or interference was found. =20

Alarmed, telecommunications providers took the ordanance to the FCC askin=
g that
it be overturned.  Last July it did just that.  It In considering the cas=
e, the
Commission found that the challenged provisions of the Anne Arundel Count=
y=20
zoning Ordinance infringe on the Commission's exclusive jurisdiction over=
 RFI
and are preempted under the doctrine of field preemption.  Now the county=
 is
upping the antie.=20

In its pleading, Anne Arundel County maintains that reversal of the Burea=
u's
decision is required because the Order conflicts with a controlling statu=
te of
the Communications Act.  The County further states that, pending implemen=
tation
of the Commission's 800 MHz proceeding, the Bureau's decision leaves publ=
ic
safety systems of local governments such as the County's vulnerable and
powerless to deal with what it terms as -- quote:  =E2=80=9C potentially =
deadly radio
frequency interference from wireless systems of commercial mobile radio s=
ervice
providers operating in the 800 MHz band.=E2=80=9D=20

The FCC has invited comments on this matter by September 26.  More is on-=
line
at the U-R-L featured in this weeks Amateur Radio Newsline printed report.

(DO NOT READ: The complete story in the the FCC website at=20
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-03-2734A1.doc) (CGC)

**

RESCUE RADIO:  CELL PHONE HELPS RESCUE FCC OFFICIAL

A cellular telephone has helped to rescue two men dangling in a gondola
buffeted by severe winds near Aspen Colorado.  One of them is the chief o=
f the
Federal Communications Commission's Wireless Bureau who turned to the pho=
ne
during an ordeal where he was trapped for more than two hours.  Amateur R=
adio
Newsline=E2=80=99s Bruce Tennant. K-6PZW, reports:

--

According to news reports John Muleta leaned on the technology he oversee=
s when
he and Robert Pepper, an adviser to FCC Chairman Michael Powell, got stuc=
k in

the gondola on Monday, August 19th.  The two men had used a break in a
telecommunications summit to take in the view from atop of 11,000 foot As=
pen
Mountain.=20

Their sightseeing trip turned into an ordeal when the tram service abrupt=
ly
shut down during their return.  It stranded Muleta and Pepper n the enclo=
sed
gondola part way down the mountain.  When help was slow to arrive, Muleta=
 used
his cellular phone to call for assistance.  But the local service provide=
r
provider apparently did not have the latest "enhanced" 911 technology and=
 could
not locate him precisely.  So Muleta simply directed the rescue effort ov=
er the
phone. =20

Once off the mountain Muleta told the press that he was very happy that h=
e had
remembered to carry his cellular telephone with him.  He added that had h=
e not,
that it would have been a much different scenario.  This, if they had bee=
n
trapped all night with the weather getting getting colder.

For the Amateur Radio Newsline, I=E2=80=99m Bruce Tennant, K6PZW, in Los =
Angeles.

--=20
  =20
Ironically, just before he left for the trip Muleta told an interviewer  =
that
the FCC is looking at ways to accelerate the deployment of Enhamced 911
service.  This is the system that uses G-P-S technology to more precisely
locate callers.  (Published News Reports)

**

## ENFORCEMENT:  INTERNET SALES BRING LETTER OF INQUIREY

The FCC has sent a letter of inquirey to Randy Owen, N9UOM, of Toma Wisco=
nsin
regarding his license renewal application.  The Commision is asking Owen =
about
his apparent involvement in the sale of non-certified C-B transcievers an=
d
non-certified High Frequency amplifiers over the Internet in 2002.  Owen =
is the
owner of Roper Electronics whose website was advertising the merchandise =
for
sale.  (FCC)

**

## ENFORCEMENT:  FORMER HAM WARNED NOT TO CONTACT THE FCC

A brefly licensed former ham has been told not to call the FCC and wait f=
or it
to contact him.  The agency=E2=80=99s Daryl Duckworth, NN0W,  explains:

--

(Duckworth) =E2=80=9CJack Gerritsen of Bell California has recieved a war=
nng notice
about a violation of ex-patrte rules after his license had been set aside=
.  His
repeated calls to the offices of Administrative Law Judges is a violation=
 odf
the Commission=E2=80=99s rules against ex-parte communications. Ex-parte =
rules place
restrictions on contacts with Commission decision making personel.=E2=80=9D=
 =20

--

Gerritsen=E2=80=99s license and KG6IRO call sign were set aside only days=
 after they
were issued back in November of 2001.  This after the FCC learned that he=
 had
been convicted in California state court of a radio related offense.  It =
also
recieved complaints alleging that Gerritsen had been on the ham bands pri=
or to
recieving his license.  (FCC, RAIN)

## NAMS IN THE NEWS:  9M2TO WINS UKDXF AZWARD

Some names in the news.  The Chiltern DX Club of the U-K DX Foundation ha=
s
awarded its prestigious 'Local Heroes' Award for 2003 to Tex Izumo, 9M2TO=
.  The
club=E2=80=99s awards committee recognized the commitment Izumo has shown=
 in
providing many contacts and confirmations with amateurs world-wide on all=
 bands
from 160 to 6 metres over a period of many years.

This annual award goes to an operator resident in a DX country who has pr=
ovided
excellent service to the DX community and who maintains a high standard o=

f
operating without the benefit of major sponsorship. The award carries a c=
ash
prize and a year's honorary membership in the Chiltern DX Club.  (GB2RS)

**

## NAMES IN THE NEWS:  HAM APPEARS ON TV MOTORCYCLE SPECIAL

Bob Mastrangelo, WA6ZTA, of Thousand Oaks Californis reports that he rece=
ntly
participated in the filming of a motorcycle special that aired August 28t=
h on
The Travel Channel.  The show is called Revolution on Wheels, and Bob is =
seen
in the beginning riding his yellow Honda Gold Wing and is interviewed abo=
ut 25
minutes later.  Since The Travel Channel does repeat these programs, chec=
k
local listings to see when it will air again and keep an eye open for WA6=
ZTA.=20
(ARNewsline(tm))

**

## NAMES IN THE NEWS:  KB4KCH NEW VP OF ARNEWSLINE(TM)

The Board of Directors of the Amateur Radio Newsline has confirmed the
appointment of David Black, KB4KCH, of Helena, Alabama, as its Vice Presi=
dent.=20
Black, whom you heard earlier in this newscast will fill out the unexpire=
d term
of Roy Neal, K6DUE, who died last month following heart valve surgery.

David Black, KB4KCH, is owner First Frame Video in Birmingham, Alabama.  =
He is
also a 20-year veteran of the broadcast television industry.  Prior to st=
arting
First Frame Video, David worked as a television news reporter and weather
anchor at WVTM, the NBC affiliate serving Birmingham, Alabama.  KB4KCH al=
so has
extensive radio and television experience while working in broadcasting i=
n
Texas.

In addition to his reporting and anchoring Amateur Radio Newsline for wel=
l over
a decade, KB4KCH is active in amateur radio Skywarn and emergency
communications.  He is past President of the Birmingham Amateur Radio Clu=
b and
is one of the founders of ALERT Alabama.  This is an organization of radi=
o
amateurs specializing in Skywarn communications to assist the National We=

ather
Service in the Birmingham area.  (ARNewsline (tm))

## VOLUNTEERISM:  HCI NEEDS VOLUNTEER SCHEDULES EDITOR

If you are a Shortwave Listener, live on the West Coast and want to edit =
an
S-W-L newsletter, listen up.  This one is for you.

Duane Fischer who heads up the Hallicrafters Collectors International nee=
ds a
volunteer  editor who can post the annual schedules of worldwide Shortwav=
e
radio stations.  The site, located in cyberspace at www.w9wze.org/SWL con=
tains
loggings, current news, tidbits and program schedules. If you would like =
to
become the Schedules Editor, please contact Duane as soon as possible at=20
dfischer@usol.com and tell him you heard about it on the Amateur Radio
Newsline.  (ASWLC, WDX6AA)

**

## HAM RADIO IN SPACE:  ARISS PACKET UPDATE

An update to last weeks story on the wayward packet radio system on board=
 the
International Space Station.  Those of you who were on the air on Sunday,
August 24 are aware that the packet system was re-activated around 12:00 =
UTC.=20
Shortly thereafter, the ARISS team received reports from the general ham
community that the packet system was operational. =20

Over the next 9 hours, many hams around the world sent digital signals th=
rough
the packet system.  But later that day, at around 21:22 U-T-C, the packet

system abruptly stopped operating while traveling over the Western part o=f the U.S.

According to AMSAT=E2=80=99s Frank Bauer, KA3HDO, the ARISS team has had= several discussions on next steps to get the system back up and running properly.= But it may be some time before this can be accomplished. This is because the= debug efforts may be delayed further due to the arrival of the Progress 12P re-=supply ship which will be keeping the two man crew very busy. =20

Once time is available, the plan is to have the crew report out on the st=atus of the packet module and then to recycle the power. This should bring t=he packet system back up. If the system abruptly shuts down again after a f=ew hours the ARISS team will then ask the crew to attach a computer to the p=acket module, download the current parameters to the ground and reset the modul=e.

Stay tuned. ARISS promises to pass along word of progress as it happens.= =20 (AMSAT, ARISS)

**

## INTERNATIONAL - AUSTRALIA: NEW BANDSPACE FOR VK HAMS

On the international beat, word than all-Australian radio amateurs will b=e allowed to operate between 3.776 and 3.800 Mhz effective from the 1st of January 2004. The move follows a proposal put to the Australian Communica=tions Authority by the Wireless Institute of Australia several years ago. (GB2=RS)

**

## INTERNATIONAL - WORLDWIDE: LIGHTHOUSE WEEKEND A BIG HIT

Meantime, reports from the around the world indicate that there was allot= of activity in this years International Lighthouse and Lightship Weekend ope=rating event. Jeramy Boot, of the GB2RS News Service has the details:

--

Mike Dalrymple, GM4SUC, the organiser of the International Lighthouse /
Lightship Weekend reports that a record number of stations - 369 - were
established at lighthouses and lightships in 48 countries - another recor=
d -
over the weekend of the 16th and 17th of August.=20

The official list of participants can be found on the ILLW website.  Next=
 year
the event will be on the 21 and 22nd of August 2004, and Mike invites
individuals and groups to join in with a weekend of enjoying radio from a
lighthouse or lightship.=20

Jeramy Boot, G4NJH

--

The International Lighthouse website is in cyberspace at http://illw.net.=
=20
GM4SUC adds that as soon as you have your plans for participatiin in the =
2004
Lighthouse Weekend made to let him know.  You can contact Mike by e-mail =
to
GM4SUC@compuserve.com  (GB2RS)

**

## DX

In D-X,  word that IN3VZE will be active once more as 7Q7CE from Malawi t=
hrough
the 21st of September.  QSL as directed on the air.  (GB2RS)

And the K3EOD Contest Team will be active in the September VHF  UHF conte=
st
September 13th to the 14th.  The group consists of W3EFH, K3EGE, WR3P, W2=
SJ and
K3EOD.  They will be on all bands from 6 meters RF through visible light =
using
SSB, CW and laser communications.  For more information please e-mail=20
k3eod@juno.com  (VHF REflector)

Lastly, HL1IWD reports that he will be visiting Honolulu through the 12th=
 of
September, and will operate as KH6 stroke KB1AIM on 20 metres, mainly CW.=
 QSL
is via HL1IWD.  (Modern DX)

**

## THAT FINAL ITEM:  NO MORE USE OF THE WORD E-MAIL IN FRANCE

And finally this week, a note from France where the governmet has said go=

odbye
to the term e-mail in favor of the native language term courriel.  A word=
 that
linguistically sensitive France is now using to refer to electronic mail =
in all
official documents and hopes that the public will adopt as well.

Frances=E2=80=99 Culture Ministry announced a ban on the use of e-mail in=
 all
government ministries, documents, publications or Web sites on July 18th.=
=20
This, as the latest step to stem what it sees as an incursion of English =
words
into the French language. =20

Courriel is a contraction of the two words and is a term that has often b=
een
used in French speaking Quebec Canada.  The ministry's General Commission=
 on
Terminology and Neology insists Internet surfers in France are broadly us=
ing
the term =E2=80=9Ccourrier electronique'' instead of e-mail - a claim som=
e industry
experts dispute.=20

And we thought that you would like to know!  (Published reports)

I am restoring an old arcade game called Top Gun.  It sumulates a quick draw contest where the player draws against a full size manikin.

http://www.sandsmuseum.com/test/topgun/topgun.html

The game is controlled by a Fidelipac or jingle cart.  The tape head in the original Viking Deck is bad.  So I bid on and bought a Dynamax stereo recorder of eBay in the hopes of using the tape head.  Talk about going to extremes to repair a game!

Once the deck arrived, I found the tape head records and plays back three tracks.  I assume the third track is for queing.

Now all my questions:

1.  Is the individual head spacing the same as a reel-to-reel deck?  Can I record the material on the reel-to-reel deck and then play it back using the Dynamax tape heads?

2.  Are there line in and out on the Dynamax deck?  I found the pins on the RJ15 or RJ25 like(?) input and output jacks in the back that allow for input and output.  However there are two for each channel that run first to a inductance coil.  Can I just use one lead or do I need to tap into the circuit farther downstream?  Where do I connect line level inputs and outputs?

3.  What are the SEC and TER buttons for?

4.  Is there an easy way to record my material using the Dynamax itself instead of a reel-to-reel deck, relating to number 2 or will the balance be wrong on the inputs?  (I will also need to figure out how to load more tape than necessary first, record the material, and then shorten the tape to the correct length...)

5.  Anyone have any old tape heads they are willng to part with?  I bought the Dynamax thinking I would just steal the tape head and junk the rest of the machine.  They were so nicely built and it seems both record and playback worked that I could not bring myself to trashing the unit!

Any help will be greatly appreciated,

Michael

> I wonder if there are any 50KW AM vacuum tube transmitters in use anymore? I read the excellent article about the Harris 50KW solid state xmtr that WLW uses, pretty neat. In the sixties, what would be the plate voltage and current for a PA running 50KW in AM? I'm sure they would use three phase input power, but how much filter capacitance would be needed to insure a quiet carrier? Always wanted to know.

==========================================
Tom:

Don't know about the 50 kW tube transmitters, but the RCA BTA-5F (5 kW) transmitter at KTSA in San Antonio Texas ran 9 kV on the plates of the RF final (single 892R) and modulator (pair of 892R's).  The RF final plate current was around 780 mA.  This transmitter was in use from 1949 until well into the 1970s.  I worked there from 1958 to 1961, so I don't know exactly when it was phased out of operation.
The BTA-5F used three-phase power and a full-wave rectifier with 6-each 8008 mercury-vapor rectifier tubes.  Don't remember the size of the filter capacitors, but they weren't extraordinary as I recall. The filter choke was about as big as a full-sized microwave oven.
Full-wave rectified, three-phase power isn't hard to filter.

Best Regards,

Ed

I would think the summer months would show a greater radio listenership, as
people get off their duffs and spend time outdoors or in their cars
traveling. I wish the group that sponsored the "Who Listens To Radio"
promotion back in the eighties would do it again. It was done with class and
intellegence, a rare combination on broadcast AM and FM today. They even
banded several hundred stations together (probably AM) one weekday morning
to pause all broadcasting for 30 seconds in the middle of the spot. It was
rather a telling moment.  I suppose some stats were gathered back then, but
have no idea where to find that data.
Regards,
Tom

A good idea, but it has been already done. It is called "multicasting". See:

<http://www.nwfusion.com/news/tech/2002/0520tech.html>
<http://www.geckil.com/~harvest/multicasting/>

Radio's pretty steady throughout the year, unlike television (broadcast and cable/satellite) whose viewership decreases during warmer weather months - a good reason why you see a lot of re-runs during the summer months.

Hello, everybody! :)

I would like to know if anybody knows what was the first attempt, in Canada, to establish either an all-news or an "all-news-and-talk" radio station?

I always used to think that it was the CKO Radio Network, which flourished from 1977 to 1989.

However, I recently found out that Vancouver Radio station CKNW made a brief flirtation with an all-news format, from 1969 to 1970.  Therefore, this was more than seven years before CKO went on the air!

In fact, when they switched to the all-news format, they even changed their call letters to CKVN (the "VN" standing for Voice of News)!  This new format did not last long; within less than two years, they decided to go back to being a music radio station, and they changed their call letter back to CFUN.  Nevertheless, I give them credit for trying!  It certainly was a noble experiment!

Does anybody know, was there even an attempt to establish an all-news or "all-news-and-talk" station in Canada even *before* CFUN made that attempt to become one?  If so, could someone please provide me with the details?

Thanks in advance for answering my question! :)

Talk to y'all later! :)
--

Keep smiling! Have a nice day!

Mark Harvey

After universal complaints about horrendously poor audio quality, iBiquity has revamped their IBOC digital AM system by switching to the "HDC" codec -- a slightly warmed-over version of AAC Plus, as used by Digital Radio Mondial (DRM).

iBiquity claims a large improvement in quality -- but can IBOC, now

with HDC, even match up to the quality that analog AM Stereo has
offered for decades?  Listen, compare, and judge for yourself:

Seaonal?

In many ways it is.

When weather is bad....or in areas where they depend on closings, parking bands, etc....listenership goes up.

But one thing we always count on, is that radio habits/listenership is a little more "out of sorts" in the summer.

Radio is seasonal in that whenever peoples regular habits are turn upside down...their radio listening gets skewed one way or the other.

$.02

M

Hey, I have seen judges get mad when people cite the constitution, so nothing like that is going to help you. If you are in court against the government, the government is going to win. If they say you have weapons of mass destruction, it doesn't matter if you don't, you will die.

> 1. you can never have too many lawyers. get some more!

Lawyers only help when it is one citizen or company against another citizen or company. The side with the most expensive lawyer wins, regardless of who is right.

But when fighting the government, lawyers will not help you, nothing can. If you cause too much problems, off to the concentration camps at Guantanamo Bay never to be heard or seen from again.

> 6. forget the 1st amendment!....

Might as well, the government has.

> 7. General appeals to Constitutional rights and precepts invariably fail
> in the real world courts.

They get mad and threaten to hold you in contempt of court if you mention the constitution at all.

> goodluck........you will need it!

Worthless. You will LOSE if you are up against the government.

Art Bell Returns to Radio
as Weekend Host of Coast to Coast AM

Press Release

LOS ANGELES, Sept. 17, 2003- Art Bell, the radio personality known for his spontaneous and compelling conversations about all things unexplained, will replace Barbara Simpson as weekend host of Coast to Coast AM - the program he made famous. He will broadcast live from 1-5 a.m. ET Saturdays and Sundays with a refeed from 5-9 a.m. ET from his home studio in Pahrump, Nev., beginning Sept. 20.

Bell stated, "For me, a return to radio is both mysterious and reassuring."

"We welcome Art back to the weekend microphone," said Kraig Kitchin, president/COO Premiere Radio Networks. "His return reflects his long-standing bond with this audience and his undying passion for radio."

No - but it doesn't apply to 1530/1660 Elizabeth, which was created under a separate set of rules from most of the X-banders out there. The "Elizabeth rule" automatically granted an X-band allocation to any AM daytimer that was the sole local service for a community of more than 100,000 people. It was originally meant to apply to WJDM and only WJDM (and was a tribute to John Quinn's pull with his representatives in Washington), but was eventually applied to 1190/1640 Vallejo CA as well.

Stations created under the "Elizabeth rule" don't have a five-year sunset.

Oh, and Sven - 1660 was never "WAHS." It used the WJDM calls in its Radio Aahs days before becoming WBAH and then WWRU.

I guess it's one of those cases where "you had to be there."

According to the rfb folks, the FCC agents on-scene asked to see their "license or authority to broadcast." The station (and their lawyer) has opted for choice 2: no license possible (obviously), so they're showing "authority to broadcast" through the petition.

The FCC will, obviously, not buy this. But it's been shown that stations with high-profile support within the community they serve tend to take longer to get shut down; I think this is both a manpower and publicity issue for the FCC. I honestly don't think there's anybody at rfb who actually thinks they will keep the feds at bay indefinitely...the question is making the feds work to enforce the law.

And while there are legal issues at play with this whole unlicensed broadcasting thing, rfb's case is not one where the station began with the express purpose of engaging the FCC in court, a la Dunifer, so its chances in court are admittedly slim. I don't think there's any legal action in the pipeline now where the station has met the myriad requirements detailed by the courts for standing to challenge the FCC's licensing policy on its merits.

That being said, 107.9 remains live in Brattleboro as I type this...

There are some in-format differences within radio...for example, the summer book is usually close to insignificant to a news/talk format station.  But CHR/Top 40 stations do a lot during the summer.

By LARRY BONKO, The Virginian-Pilot
� September 19, 2003 | Last updated 8:29 PM Sep. 18

Thank heaven for good old-fashioned radio.

With the approach of Hurricane Isabel on Thursday morning, power was lost in thousands of homes in Hampton Roads -- thousands of television-owning households.

That meant no Triple Doppler TV forecasts and no updates from The Weather Channel, which had dispatched Mike Seidel to the Virginia Beach Oceanfront as early as Wednesday evening.

How did TV-deprived Hampton Roads keep up with the storm and the damage it was inflicting? R-A-D-I-O.

As early as 4 a.m. Thursday morning, AM radio station WNIS was on the air with reports of the storm's approach. Later on Thursday morning, when the electricity cut off, local radio stations joined with the three Hampton Roads television stations (WAVY, WVEC and WTKR) to get the story out to residents with battery-equipped radios.

WVEC's storm coverage was heard on WCMS-FM and WWSO-FM.

``Let's go now to Channel 13's coverage . . .''

WAVY's live team reporting was fed to WNOR-FM and four other stations. WTKR had hooked up with WKOC-FM.

About 2 p.m., WAVY weather reporter Don Slater, aware that he was speaking to a large radio audience, began to provide talking pictures of windswept scenes that residents could not see.

``I realize that a lot of you are listening to us on the radio,'' he said.

Jeff Lawson on WVEC also became a TV meteorologist-turned-radio-reporter.

``Don't forget that we're under a tornado watch . . .''

Channel 10 reporter Patty Culhane was heard by radio listeners describing the stormy scene at the Oceanfront as ``getting uglier and uglier.''

Most of us had to picture it. It was theater of the mind.

At WWDE-FM, program director Don London said the staff was aware that TV signals might be lost and radio would become the eyes and ears of storm coverage.

``Led by our old warhorse, Dick Lamb, we were prepared to pass along updates and information with no hype,'' London said.

On WAVY late Wednesday night, Slater had outlined the projected path of Isabel, saying, ``Tomorrow will not be a fun day.''

It was indeed a horrid day, but made less so by the merging of radio and television.

Reach Larry Bonko at larry.bonko@pilotonline.com or call 446-2486.

Daws Butler will be the subject of today's ALL THINGS CONSIDERED segment.

This Friday afternoon, September 12, tune in to NPR's "All Things Considered" to hear host Melissa Block interview Joe Bevilacqua about the new book: "Scenes for Actors and Voices" by cartoon voice legend Daws Butler. In the eight minute segment, Bevilacqua talks about his mentor, plays rare sound of Daws and demonstrates the art of voice acting.

(Check your local NPR station for times.)

Well AkamaiGHost is *sort of* doing this now:

http://www.derkeiler.com/Mailing-Lists/securityfocus/pen-test/2003-07/0082.html

I don't know though - I've been able to get fairly good quality fixed
stream 20kbs RealAudio directly off my new media prototype here such that
it reliably supports about 40 'live' streams per 1mbs of outbound pipe -
theoretically good to 256 http streams per IP - with no 'bottom of the
well', no buffering, no cache copy left on the listener's drive and about 6
seconds to stream lock from anywhere on the planet..

If you have RealAudio 8 or better on anything with a 28.8 modem or better,
you are welcome to test it from where you are.. There's no subscription or
sign up required and it should spin out about 8 hours of tunes before it
decides you've had enough..

It feeding about 20 streams right now (about half my bandwidth) so you can
get a feel for how it works in production if you want to. I'm using it to
hard test secure W2K thin server Apache configuration and services load
balancing..

Just how many simultaneous streams are you thinking of addressing? Local IP
range or International?

Didn't like him, at first.  Seemed way too overly-dramatic to make a case.
Growing on me a bit.

I don't know if anyone got the info out to the person seeking 1170 KSTT's call letters they have been KJOC for at least since 1997 when I got back to the Q.C.'s from Florida. I was one of the last Top 40 jocks at 1170 KSTT ('82-'85), the calls were changed in 9-84 to KKZX (11 'KZX) for about 2 years, went back to KSTT 'til, I believe the early '90's...I wanna say '93, but I don't know for sure, I was in Tampa Bay then I'm back now pulling overnites @ sister station 97X who is now celebrating it's 25th anniversary, any 97X or 1170 KSTT jocks with old photos or audio, please email me.

Another quote from the clueless. Radio is listened to  by 95% of the US
population over 12. This is the same as historic figures.

Average listening per person is around 21 hours per week, the same as it was
in the 1950-1952 period.

The "Music Coalition" is simply upset because radio figured out that most
people don't want to hear unknown songs by unknown artists. That was the
basis for the Top 40 format, going back to the early 50's. Nothing new,
nothing unusual.

They were not tightened. All that happened in the recent Philadelphia
decision was that the most recent (2003) deregulation steps were put on
hold; the 1996 deregulation is very much intact.
>
> and
>
> "According to the US ratings service Arbitron, Americans are spending 10%

Not so. Radio listening today is lower than the late 80's peak, but very
much compatible with levels from the 50's, 60's and 70's. Radio circultation
is not falling at all. Time spent listening is off about 15% since 1988, or

about 0.5% annually. Arbitron has never issued a statement even remotely
similar to the "10% a year" claim because this is not true.

Interestingly, people who have studied playlists nationally don't see any
more standardization than in the 50's.

Actually, only some talk hosts on the Clear Channel talk stations took such
a line. The company took no position. Talk hosts on other, non Clear Channel
stations, took similar positions.

> "We are genuinely shocked when we discover that the largest radio group in

UK."

There is a reason why we broke away form the Brits. They don't always get
it.

Clear Channel held no rallies. One of the talk hosts syndicated on many
Clear Channel talk stations held such rallies... in maybe 10 cities.

It also helps if you -=tell=- them in your QSL report that you wish a
QSL card rather than an email confirmation.

For as long as I can remember I've been hearing sound bytes of the president's radio braodcast on my local radio news but I've never heard an entire speech, or any reference to a real live radio station associated with it.

When did it become a regular thing and how is it done ?

By Anitha Reddy, Washington Post Staff Writer

XM Satellite Radio Holdings Inc. completed a secondary stock offering yesterday to pay for a spare satellite in case it does not receive insurance money for its two malfunctioning satellites that are in orbit.

washingtonpost.com

The company, based in the District, netted $150 million from its sale of more than 11 million shares of stock to divisions of Legg Mason Inc., the Baltimore investment firm, and another unnamed institutional investor.

XM will use the proceeds to pay for XM-4, a $130 million spare satellite that the company has ordered from Boeing, "if insurance proceeds are not received in a timely manner," the company said in a statement yesterday.

Shares of XM rose 27 cents yesterday, to $15.84. Including the new shares, XM has 135 million shares outstanding.

The company chose to place its shares directly with investment firms to avoid "several million dollars" in underwriting fees, said XM spokesman Chance Patterson.

The company's two orbiting satellites, nicknamed "Rock" and "Roll," are not generating adequate power because their defective mirrors are not reflecting enough light onto their solar panels.

XM's insurer has denied the company's initial $400 million claim on the two satellites. It contends that the satellites are still operating above their insured level and that XM has violated certain policy provisions, according to XM.

Negotiations with the insurer are still in progress, Patterson said. Last month, Hugh Panero, XM's chief executive, said the company is prepared to pursue arbitration or litigation to settle its claim.

The satellites, launched in 2001, have life spans of 17 years if working properly, but their defects will force the company to bring them down in 2008. XM also plans to launch its existing spare satellite, XM-3, in late 2004 or early 2005 to supplement its failing satellites.

The satellites' problems are not affecting the quality of XM's radio broadcast, the company said.

How does one get into remote radio broadcasting? I'm a 30 year radio veteran and would, love to have a couple of shifts to keep my feet in the business. I presently do voiceovers all around the world, but no radio..and I miss it.

The catch 22 is the stations that use remote voice tracking don't want anyone to know, so there's no way to know who to call unless you just line up a list of markets and start e-mailing.

Any ideas? (that don't invlove killing myself or shoving a large object in a small hole?) <g>

Thanks!

The acronym "A&R" is unfamiliar to me in radio parlance.

Would someone shed some light?

Maintenance, not sound is the reason. Very soon there will be a new
transmitter site across the street from the current one. As I recall,
the new site will have 2 DX-50s.

Rich

You may not have heard of it, as it was a VERY recent format change -
just last week IIRC.  WGFX-104.5 (licensed to Gallatin) flipped from
classic hits to all-sports.  There hasn't been a book since they
flipped, so I've no idea how they're doing.

(which station are they listing with Salem "Christian Talk"?  I thought
Salem's only stations in the market were religious AC simulcast pair
WYYB/WRLG.  But I work in TV so am not fully up to date on who owns what.)

(oh, I meant competitors strictly in the sense of offering similar
```

formats - not necessarily in the sense that they were having any
relative success<grin>)

> In Nashville you might be right. I'm amazed that WWTN has better
> numbers than WLAC. WWTN's programming is weak (IMHO), compared to
> WLAC. Looking at the lineups I would assume WLAC has a signal problem.

Up here north of town WLAC definitely has nighttime signal problems. I've heard the Joliet, Illinois daytimer on the same frequency on the car radio at sunset, while driving within 20 miles of the WLAC transmitter. They are directional at night, though their nulls don't fall into any extremely important areas. I suspect the high dial position is the big problem. My personal impression is that, averaged across the market, WWTN's signal is considerably better than WLAC's, especially at night.

Too, by comparison to NYC, Nashville's FMs have considerably better coverage. Less interference, more power, higher towers.

This is a fascinating discussion. I remember when AM transistor radios had the little triangles on the dial denoting 640 and 1240, but that's as far back as my memory goes on the subject.

There is a station in Fayetteville NC (WFNC) on 640 centrally located amidst several military bases. Does anybody know if this station had some sort of central role with CONELRAD back in the day?
For that matter, did the heritage AMs currently on 640 or 1240 fulltime have any history with it?

GTT

> I'm old enough to remember. At the class 1B clear channel station I worked at our 10 kw auxiliary transmitter had a bunch of components that had to be jumpered and/or added. We would test it into the dummy load after we set it up on 1240. There was a large manual denoting the changes that had to be made. There was also an area test where we would get an alert from the Conelrad control point and we would have to set the aux to 1240 and turn its control over the the control point and then they would test for a half hour or so. On for 30-60 seconds and off for 3-4 minutes in a random pattern. I think this was the only exception to the union contract that we could do anything except take meter readings without a supervisor there. Of course we took about 100 meter readings and then typed them into the official log every 1/2 hour.

For anyone interested, here's a reminder of upcoming DX tests; if
anyone
has any additions or corrections, please contact me. (BE SURE TO NOTE
THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Saturday, October 4, 2003 - WJTO-730, Bath, ME 12:00am-1:00am ELT.

Please remember, what's listed as being on, say, Monday *may* be what you think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message letting me know, and please, drop the station personnel a note, via e-mail or snail mail, thanking them for running the test! Also, for brevity's sake, I didn't post the QSL addresses; if you need these, let me know!

Lynn.

WHVO in Hopkinsville KY drops to 24 watts and has a decent signal which
covers about 6 - 8 square miles.

By Brooke Shelby Biggs, The Nation
September 18, 2003

Clear Channel is destroying radio. At least, that's the popular mantra these days. Radio consolidation - which shifted into high gear with the Telecommunications Act of 1996 and has been fostered by a pro-big-media majority at the Federal Communications Commission - has resulted in the Wal-Martification of radio. Across the nation, stations are being gobbled up by huge chains like Clear Channel, which then monocrop their playlists. It's the same fifty mindless cookie-cutter songs played in an endless, soul-numbing loop, the same conservative talk shows, even the same deejays doing the same shows for simultaneous broadcast in a half-dozen markets nationwide. Jockeys are losing their jobs as the big chains consolidate and centralize their work forces. There, in the distance, is the faint swan song of independent radio. Abandon all hope, ye who flip thy radio dial...

GELLER MEDIA INTERNATIONAL NEWSLETTER
September 2003

WHICH ONE GETS TO INTERVIEW THE GOOD GUESTS?

Do you remember the bible story, the one where two women fight over which is=
=20
the true mother of a baby?  And King Solomon offers to solve the problem by=20
slicing the child in half?  On a strange level this is not an unfamiliar dyn=
amic=20
to many program directors and executive producers at radio and TV stations=20
with interactive talk programming. =20

The question: Who decides, of the many talented interviewers and hosts you=20
have on the station, which of your on-air talent gets to interview the "hot"=
=20
guest?

You may be familiar with the situation. A big name celebrity, politician,=20
sports figure or author is in town, or available to be on the station.  Ever=
yone=20
wants to do the interview.  But the guest is only going to be able to do ONE=

=20
interview? Or, say, even if you can get the interviewee on more than one sho=
w,=20
it may  not be good programming to overkill with overexposure or "too much"=20=
of=20
this guest, even though the hosts or presenters may REALLY want to do it.

Think about the listener.  Ask: What am I offering my audience that he/she=20
cannot get elsewhere?  Also take a look at the entire media landscape.  We d=
o=20
not work in a vacuum.  The audience also gets their news and information fro=
m=20
OTHER sources.  Has this person been all OVER the other TV, radio and newspa=
per=20
in the market this week?  Are we just one more stop on a long list of "media=
=20
exposure" for this subject or person?  If a subject is overexposed, though i=
t=20
may be fun for the people at the station to interview a high profile=20
personality or political mover, ask: Will it be boring to the listener?

If this has NOT happened at your station, consider yourself fortunate. =20
Otherwise, here are a couple of proven ideas to try to work it out internall=
y. =20
NOTE: None of these are particularly fair, but they are time tested and can=20=
work=20
to create powerful radio.

PROBLEM: Everyone fights over wanting to interview the same guest:

Who is the "King Solomon" in the station? =20
Whether it is the PD, executive producer, or even the general manager,=20
someone has to make the call and everyone must agree and take directive from=
 the=20
final deciding voice.  The talent must defer to and follow.  You don't want=20=
to=20
run into the "ask mom, then if you don't like the answer, ask dad=E2=80=A6"=20=
syndrome=E2=80=A6
I've seen it happen more than once, if a talent doesn't like an answer or=20
decision, he or she will go up a level and take it to someone  else.  This c=
auses a=20
multitude of management problems.  Try to avoid this by setting rules and=20
systems in place and explaining the thought process BEFORE the situation occ=
urs.. =20

GUIDELINES:

It makes sense to put the "hottest" guests/experts in morning or afternoon=20
drive times, traditionally when most people are listening.  If the producers=
 and=20
hosts cannot agree on who gets the guest, then the one with the biggest=20
audience/daypart wins.

To appease the other hosts, and recycle content for the audience, one way=20
that might satisfy disgruntled hosts, presenters and producers is to take th=
e=20
interview with the high profile celebrity, politician, author, sports figure=
,=20
etc. and take three small key sound bites
That can serve as open phone talking points for discussion for OTHER shows.=20=
=20
When the other show hosts air these "pieces" of the interview from this=20
morning, it can be introduced with "If you did not happen to catch this morn=
ing's=20
interview with J-Lo, The Pope, or whomever, here's a bit of what he/she said=
 on=20
our morning show=E2=80=A6Then the host, through powerful radio techniques (f=
ocus,=20
engage, opinion, position and storytelling) can use those sound bite comment=
s as=20
content to "spark" a unique discussion now.

If  a few of the topics the person hit upon included powerful storytelling,=20
authentic self revelation, strong opinion or position, or something about=20
health, heart, money or simply talkable topics that can be continued within=20=
THIS=20
show=E2=80=A6then it can work and the audience feels they've "heard" the big=
 guest. =20
It's not the guest, it is the CONTENT.  So if the show is riveting, powerful=
=20
radio, and works.  Then everyone is happy.

If a host or producer has a special prior relationship with the interviewee,=
=20
or a personal connection to either the guest or the public relations person,=
=20
that host gets to do the interview.  Again, this may not seem "fair" but thi=
s=20
works.

Again, in principle, I am against this, however, in the rare instance when a=
=20
guest MIGHT appear on two shows on the station or network, it is vital that=20
the interviews be COMPLETELY different.  So if he/she goes on in the morning=
=20
talking politics, then shows up again at night, try to do something ELSE, or=
=20
unexpected content with the subject say, "desert island discs," romantic adv=
ice or=20
storytelling or even favorite recipes.  Anything, fresh, relatable and new,=20
NOT repeating exactly what happened this morning.

10th ANNUAL GELLER MEDIA INTERNATIONAL PRODUCER'S WORKSHOP in NEW YORK:

If you've faced this or any other "producer" dilemmas, you may benefit from=20

our upcoming Producer's Workshop!  It takes place in New York, on Saturday,=20
October 11th (we do this on a Saturday so producers and programmers and host=
s can=20
actually COME to it without missing work) there are student or between gig=20
rates available and if you come in on Friday, you might also want to come al=
ong=20
on the New York station tours, which are included in the workshop at no extr=
a=20
cost.  Each participant of the workshop receives a complimentary copy of THE=
=20
POWERFUL RADIO WORKBOOK and is a unique opportunity to meet other people who=
se=20
work has them "facing the blank page" from around the USA and around the=20
world.
If you would like to attend, early registration is $189. BEFORE Sept. 16th,=20
then $225 after that.  If you are interested, you can contact us by phone at=
=20
1212-580-3385 or fax at 1212-787-6279  or you'll find more information on th=
e=20
workshop and can register online at www.gellermedia.com

NAB/ PHILADELPHIA - If you are planning to attend the NAB in Philadelphia, I=
=20
hope you'll come say hello.  I will be presenting LifeStage Demographics on=20
Friday, October 3rd at 1:45 PM. =20

NAB EUROPE/ and a few weeks later in London, if you are planning to attend=20
the European NAB, October 19-21, they've invited me to do a session for prog=
ram=20
directors on Powerful Airchecking - and talent development.  There are still=
=20
places available for that closed session, however you do have to sign up, (n=
o=20
extra cost to NAB registrants) by contacting Mark Rebholz at mrebholz@nab.or=
g
Also in London, I'll be moderating the "case study" looking at the successfu=
l=20
relaunch of LBC's talk format, LBC is the oldest commercial radio station in=
=20
London, they relaunched the talk format last January.  (www.lbc.co.uk)

Grow your audience and increase ratings!
REGISTER NOW-=20

Don't miss the 10th Annual

HOW TO REGISTER -online at www.gellermedia.com
or call or fax for a registration form.. 212 580 3385 (phone)  email=20
vgeller@aol.com or FAX  212 787-6279
COST: Registration $189.  ($225 after September 16th)=20
*Includes Luncheon and- all registrants will receive a complimentary copy of=
=20
Valerie Geller's  book: THE POWERFUL RADIO WORKBOOK-The Prep, Performance &=20
Post Production Planning ($39.95) =20

This annual worldwide broadcast creativity workshop in New York is for you i=
f=20
your work has you "facing the blank page..."

Don't miss this unique day in New York! Take your opportunity to network,=20
meet and share ideas with producers, on air presenters, managers and program=
mers=20
from radio from around the world!

And don't be fooled by the title for "Producers."   This workshop in New Yor=
k=20
is for programmers, on air talent, producers and news.  Any one who has to=20
come up with ideas to get an audience, on air, is welcome.  We include both=20=
TV=20
and radio in the mix.  The theme: "Facing the Blank Page=E2=80=A6"  The focu=
s is on=20
creative content, NEVER BE BORING, and powerful promotions.

=C2=B7 FACING THE BLANK PAGE
=C2=B7 KEEPING IT "POWERFUL - EVEN ON A DULL DAY
=C2=B7 IDEAS, IDEAS, IDEAS!
=C2=B7 HANDLING "CHALLENGING ON-AIR PERSONALITIES
=C2=B7 PROMOTING EFFECTIVELY AT LITTLE OR NO COST
=C2=B7 NEVER BE BORING

Take this opportunity to learn, and meet top broadcasters who work every day=
=20
to come up with ideas to get and keep audiences!  From all formats, from all=
=20
over the world. Plus GREAT Seminar sessions, idea swap, network, plus learn=20
techniques that work to make it powerful=E2=80=A6 from an amazing slate of w=
orkshop=20
leaders! =20

Including: "Creative Animal" and promotions expert Doug Harris, offering=20
ideas on low cost practical promotions to get the word out about your show=
=E2=80=A6The=20
creativity sessions will feature Lifetime Cable TV Program Director Alan=20
Sternfeld on targeting, 1010 WINS news personality Lee Harris, Syndicated Ho=
st and=20
WOR/NY Personality Lionel, Former - Airplay Monitor's Editor now head of=20

programming for Edison Research, Sean Ross, KEYNOTE LUNCHEON SPEAKER: Talker=
s Magazine=20
Publisher Michael Harrison; AM 770 WABC New York top rated "Curtis & Kuby"=20
Producer Erik Hastings on show prep, powerful call screening and developing=20
humor,  Valerie Geller, author and international talk consultant: "What work=
s=20
around the world..." and much much more.  Don't miss it.  Early Registration=
 is=20
$189. USD. includes luncheon and a complimentary copy of The Powerful Radio=20
Workbook.  Registration $225. after September 16th.

Ask about student or "between gig" rates. And if you are interested, on=20
Friday, prior to the workshop, October 10th,  New York area radio station to=
urs are=20
offered free of charge for workshop participants

For more contact Geller Media International at www.gellermedia.com, email=20
vgeller@aol.com or phone 1 212 580 3385 or fax 1 212 787 6279.

Here's what a few of last year's attendees had to say about the workshop:

WMCA/NY Drive presenter Kevin McCullough says: "Don't miss this day!  I tell=
=20
everyone I talk media with to attend!"

Uunco Cerfontaine, former PD of Radio 538, now with Radio Veronica in the=20
Netherlands says:" This annual producers seminar draws talent from all corne=
rs of=20
the globe to the city that lives and breathes radio: New York. Valerie Gelle=
r=20
is an inspiring coach and is unique in showing how to make radio powerful.=20
Whether you work at a CHR or a talk station, this is a radio event you simpl=
y=20
cannot miss!"

Clear Channel's WGST/Atlanta JOBTALK host Margot King: " I've had proven=20
results with increased audiences from working with ideas from this workshop.=
..All=20
in all, a valuable day." =20

Come, if you can, meet people, connect for the next gig if you need to or=20
just exchange great usable ideas with broadcasters from all over the world,=20=
who=20
are working with the Powerful Radio Methods! You won't want to miss this uni=
que=20
day in New York City. =20

>>
The BTA-5F used three-phase power and a full-wave rectifier with 6-each 8008 mercury-vapor rectifier tubes.  Don't remember the size of the filter capacitors, but they weren't extraordinary as I recall. The filter choke was about as big as a full-sized microwave oven. Full-wave rectified, three-phase power isn't hard to filter.
>>

Some RCA 5Ks and 10Ks were designed as two-phase, and, consequently, have four rectumfier (sic) tubes.

This might be called a "four phase" rectifier in the same way as a three-phase, full-wave rectifier is called a "six phase" rectifier.

Oh, these 5Ks and 5Ks actually run on three-phase feeders, as the primaries are connected in a Scott-T, while the secondaries are connected as two-phase.

Buffalo and Philadelphia (including Camden, and undoubtedly RCA's plant as well) were the last hold-outs of two-phase power in the U.S.

Why get new transmitters?  Aren't the existing ones still good (and one of
them is pretty modern?)

Wouldn't it be easier to just move the existing transmitters, one by one
to the new site?

Why is WOR changing transmitter sites ... again?

IIRC it began in the Reagan administration.  President Reagan, who began his working life in radio, was granted five minutes per week by the national radio networks to address the nation, "unfiltered" as it were.  Democrats were then granted equal time to reply.   Every president since then has continued the tradition, and the opposition party has continued to provide responses.  But fewer stations carry them nowadays.

Do the words "Burns on line go ahead" mean anything to you??  Jimmy Pattison
eventually destroyed CJOR when his religious zealotry got the best of him as it
often does, and he turned it into a christian rock station which was a
predictable failure.

I would like to know what everyone thinks of Lenny Kahn's AM digital system.

He says that his system won't have the hash on the sidebands that interferes with first-channel stations and won't compromise the fidelity of the existing analog audio.

And that it will make the station sound better (rather than worse) on existing radio sets.

Comments?  I'm really interested in this system but considering the "muscle" behind Ibiquity's HD-Radio system, I think Kahn's system is bound for the wastebasket of electronic history.

Anyone in the Burlington, VT area tape the last TV newscast of WVNY?  If so, I'd appreciate a copy.   See below clip from the NE Radio website of Scott

Fybush.
******************************************************************

VERMONT is down to two TV newsrooms (one of which is really across the lake in Plattsburgh, N.Y.) with the shutdown on Friday of the news operation at WVNY (Channel 22) in Burlington.

WVNY's latest stab at doing local news lasted about four years, and it was a pretty classy attempt right up to the end. The last newscast Friday night began, we're told, with a series of teases that included one for "the fat lady sings" - and it ended with the theme from Newhart playing over an outside view of the studios as anchor Eric Greene paraphrased Bob Newhart's signoff, telling viewers "I had the strangest dream; for the past four years, I've been hosting a newscast in Vermont."

Greene is one of about two dozen WVNY staffers out of work; we wish them all the best as they search for new jobs.

So no hope of the screaming and yelling Spanish preachers on AM 1530 ever
going away? Too bad.

Who owns AM 1530?  Is it the same folks that own WWRU - Radio Unica or
have they unloaded it on someone else?  Is it possible to separate the
stations?

> Oh, and Sven - 1660 was never "WAHS." It used the WJDM calls in its Radio
> Aahs days before becoming WBAH and then WWRU.

Ahhh...OK. Sorry about that one. Thanks very much!! :-)

That's providing there's anyone in that tiny area. This may work in a high-population density city like Boston/Cambridge....

How crowded is Hopkinsville, Kent.?

--
Sven Weil
New York City, U.S.A.

[ Moderator's note: I have family in Hopkinsville, KY. The area is fairly well populated... Fort Campbell straddles the city and state lines, with half of the base sitting in Hopkinsville, and the rest sitting in Clarksville, Tennessee. The base itself is pretty big. ]

Amateur Radio Newsline™ Report 1362– September 19 2003

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE

As you are aware, Amateur Radio Newsline is, primarily, an audio news service and this weeks newscast is very audio intensive. While reading gives the basic facts, we advise you to download the audio file at http://www.arnewsline.org/quincy to get the most out of the newscast in relation to our coverage of Hurricane Isabel and the role Amateur Radio played and continues to play in storm communications efforts. This is a story told in “sound” from the scene that really cannot be reported in any other way.

**

Amateur Radio Newsline report number 1362 with a release date of Friday, September 19th 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio is there as a hurricane pounds the U-S east coast, the ARRL holds tight on Morse and more petitions are on their way to the FCC. Find out the details on Amateur Radio Newsline report number 1362 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM ADIO AND HURRICANE ISABEL

Her name is Isabel. She is a hurricane that slammed into the United States East coast with gale force winds. Emergency services including ham radio were ready and waiting as we hear in this report:

--

Roaring ashore with winds of more than 100 miles an hour, Isabel made landfall along North Carolina's Ocracoke Island, crossing the Outer Banks around midday September 18th. On the west end of Ocracoke Island, sustained winds were measured at 80 miles an hour. Storm surge of 12 feet was reported I

Bernard Nobles, WA4MOK, is a Section Emergency Coordinator in North Carolina. He says hams mobilized over a large part of the state:

4:07 IN In emergency operations centers
OUT in the eastern part of the state

The action wasn't just in North Carolina. Hams throughout the eastern seaboard were in position, ready to provide backup communications. Only a few hours after the storm had moved ashore, more than 800-thousand customers were without power in North Carolina and Virginia. Bill Moraine, N2COP, is a Public Information Officer in southeastern North Carolina. He says hams were providing a variety of communications services:

--

IN they really run the range of

OUT in northeastern North Carolina.

--

Morrain says High Frequency conditions were often deplorable with extensive interference. He says the Hurricane Watch Net was being relayed locally through both EchoLink and IRLP, the Internet Repeater Linking Project, to help overcome H-F problem. All along the storms projected path ham radio operators trained in emergency communications were in service or on stand-by alert. The Hurricane Watch Net was busy on 14-point-325 MHz. At the National Hurricane Center in Florida, amateur station WX4NHC helped with relaying storm reports. With hams throughout the mid-Atlantic region helping in the communications effort, Morraine said putting a number on those assisting would be tough:

--

IN We don't have a handle
OUT in this particular disaster One bit of good news.

--

Morraine says Isabel is no Hugo, referring to the devastating hurricane that slammed into North Carolina in 1989:

--

IN Thanksfully, Isabel
OUT about 105.

--

Hams were scheduled to staff the North Carolina Emergency Management Eastern Branch headquarters in Kinston. The amateur station at the state emergency operations center in Raleigh was also activating, with an umbrella of liaison stations being organized to monitor the 146.88 MHz repeater and the Tarheel Net.

The National Weather Service had hurricane warnings posted for parts of North Carolina and Virginia.  Forecasters warned hurricane force winds were possible 150 miles inland, along with tornadoes.

As Isabel began moving north after landfall, flooding became a serious threat. At least one hotel in Kill Devil Hills collapsed into the ocean. Evacuations were being ordered along Chesapeake Bay.

In the hurricane's first day ashore, nearly 900 flights had to be cancelled, with some airports closing or limiting service. Up to a foot of rain was possible in West Virginia's hilly Eastern Panhandle, with between 6 and 9 inches of rain expected over parts of Pennsylvania. Amateur radio operators say they will stay on the air helping--as long as needed.

For the Amateur Radio Newsline, I'm David Black, KB4KCH, in Birmingham Alabama.

+++

As David said, it was North Carolina that was the first to feel Isabel’s fury.  Gay Pearce, KN4AQ, is in Raleigh with that part of the story.

+++

Amateur Radio was in full swing in eastern North Carolina as Hurricane Isabel made landfall on Thursday.  For hams and everyone else, the term "made landfall" was a confusing one.  High winds, rain and power failures reached the Raleigh-Durham area, 150 miles inland, well before the hurricane eye crossed the coastline.

--

IN:  WAKE EOC POWER FAIL AUDIO]

--

The Tarheel Emergency Net, North Carolina's ARES net, was in operation, splitting duty between 3923 and 7232 kHz, depending on propagation

--

IN:  HF COUNTY CHECK-IN AUDIO],

--

The North Carolina ARES group has not yet begun to use 60 meters.

Most traffic between the coast and the states Eastern Branch headquarters in Kinston was being handled on linked repeater systems.

Several hams have remained on Hatteras Island on the Outer Banks, and for a time, hams across the world could listen to them via Echolink and IRLP connections.  That ended as power and phone service failed near the coast.

The National Hurricane Center in Miami continued to use the Internet links to take reports from areas where connections remained in place.

--

[K4JVP AUDIO]

--

There was some confusion early as too many sources of input were mixed together on one combined Echoink/IRLP conference.  The National Hurricane Center's liaison station commented:

--

[HNC CONFUSION AUDIO]

--

Control operators were able to clear up that confusion, but locally, repeater operators are finding that they can't mix local emergency and logistics traffic with a full-time Internet connection that's carrying similar traffic on other repeaters. That's a lesson for the next emergency.

Repeaters were used inland as well. The wide coverage 146.88 repeater in Raleigh linked the State EOC with surrounding counties and the Eastern Branch headquarters.

--

[VHF COUNTY CHECK-IN AUDIO]

--

Shelters began filling up as the storm moved inland, but with most shelters located in counties that would receive at least Tropical Storm force winds and a possible loss of power and telephone service, Amateurs were dispatched to provide communications.

--

[SHELTER VOLUNTEER AUDIO]

--

Reporting for Newsline from the fringe of Hurricane Isabel, this is Gary Pearce KN4AQ in Raleigh, North Carolina.

--

More on Hurricane Isabel and the role of ham radio in future Amateur Radio Newsline reports. (Numerous sources)

RESTRUCTURING: THE ARRL POSITION - WAIT TO HEAR FROM OUR MEMBERS

Why hasn't the ARRL joined those who have already filed petitions to the FCC on the topics of Morse Code testing and changes to license priveleges? In a note to his constituancy the League’s Southwestern Division Director Art Goddard, W6XD, explains it this way:

“After determining that the FCC will be handling these matters in due course, your ARRL has set a timetable that includes ample opportunity to collect member input before determining its direction at the January 2004 Board meeting.”

Goddard says to say tuned for further developments. He also tells ARRL members to contact their own ARRL Director and make known their views on these vital issues.

Goddard also suppled a brief overview of a meeting in St. Louis this past weekend, where ARRL Directors and Officers took what he calls the next step to define the ARRL's future role in Advancing and Advocating Amateur Radio. Although the details of ARRL's Long Range Plan aren't yet complete, W6XD says that hams can expect to see bold new actions in several key areas. These include advocacy in key regulatory and legislative issues, lifetime learning, certification and personal achievement and public recognition of Amateur Radio as a valuable service. Goddard adds that there will also be financial stability to implement all of these strategies. (ARRL SW Div. Report)

**

RESTRUCTURING: MORE CODE PETITIONS COMING

The ARRL may be taking the correct road on this one. This is because the latest ham radio restructuring show appears to be only in its opening act. In fact, it looks as if the six petitions favoring abolishing Morse testing and the one from FISTS favoring its retention may be only the beginning of a deluge of requests from both sides in the issue. We have heard that there are a number of other petitions already at the FCC or on their way but know little about them. Our Bruce Tennant, K6PZW has more:

As we go to air we believe there are as many as another half dozen petitions being filed on both sides of this contriversial restructuring issue. Amateur Radio Newsline will keep following this story and will have more fore you in upcoming reports. (Various sources)

**

RESTRUCTURING: FILE ON EACH PETITION

Still with this latest round of restructuring. If you are among those planning to file comments on one or more of the Morse petitions already before the FCC then listen up. If you want to make known your feelings on all of them, then you will have to file separate comments on each one.

As of this moment, a comment filed on any one particular petition will be considered for that specific rule making request alone and not on all. And having read the petitions, we can understand why. Each one asks for a specific approach in handling the Morse question and it would be impossible to provide a one comment that would fit all.

By the way, as we go to air the FISTS pro-code request has still not been assigned a rule making designation by the FCC. (ARNewsline(tm))

**

RADIO LAW: CONGRESS MAY INCREASE FCC AUTHORITY TO ISSUE FINES

The Federal Communications Commission would be given the authority to levy significantly higher fines. This, if a bill being considered by the Commerce Committee of the U.S. Senate becomes law. Amateur Radio Newsline’s Mark Abramowicz, NT3V, has the details:

--

The Wall Street Journal reports that fines for violating FCC rules could jump tenfold, and activities of lobbyists would be further restricted under a bill introduced in mid-June by Senator John McCain who chairs the Committee that authorizes the agency's funding. In addition to the increase in the Commission’s authority to levy fines, the proposed legislation would also extend the statute of limitations on violations of the agency’s rules from one year to two.

Other provisions include restrictions that would prevent top staffers from lobbying the agency for one year after leaving their positions, and a ban on the payment of travel expenses of FCC officials by companies and private interest groups. In other words, if the FCC were to send out a representative to any gathering the cost must be borne by the agency and not the events sponsor. Its far to early to know if such a prohibition would impact on the FCC ability to attend hamfests, conventions and other hobby radio gatherings.

For the Amateur Radio Newsline, I’m Mark Abramowicz, NT3V, in Philadelphia.

--

McCain’s bill reportedly has the support of Senator Ernest Hollings increasing its chances of gaining broader support. Even so, it is still expected to face tough opposition as it makes its way through the regulatory aproval process. (Published news reports)

**

REMEMBERING : THE 2ND ANNUAL N2LEN 9/11 NET

The second annual N2LEN nine eleven net took place on Thursday, September 11tth. The gathering used voice over I P technology to link repeaters world wide over the Internet. This allowed radio amateurs and non-ham listeners to reflect on the terrorist attacks of two years ago and the role that radio amateurs played in the aftermath.

ARRL President Jim Haynie, W5JBP, was this years keynote speaker. He addressed the role of Amateur Radio in homeland security and urged each amateur to develop his or her emergency communication skills.

As with the 2002 net, this year's cyberspace and radio meting relied on EchoLink and eQSO Internet software connections as well as repeaters and simplex links around the world. (N2LEN Net News Release)

**

AMATEUR RADIO SURVIVAL: UCF CLUB EVICTED FROM ITS HOME

The University of Central Florida Amateur Radio Club station K4UCF has been evicted. This, from the campus location that it had occupied for 30 years. Mert Garlick, N6AWE, reports:

--

According to a qrz.com website posting from Matt Collins, KG4JYD, the eviction took place last June but seems only now to have been made public. It reportedly resulted from faculty complaints about the radio club who concluded that damage to computer equipment was from a lightning strike that entered the building through the club's antenna system. University's plant personnel also complained that club members worked on the roof of the building without authorization.

But Matt Kassawara KG4FEQ , has a differing view. Kassawar who is with the club says that the ham station is the closest equipment to the antenna system. He says that neither that equipment nor the club repeaters were damaged by a lightning strike, indicating that the clubs antenna could not have been the source of the damage.

The club requested that University of Central Florida provide comparable space from which to operate. So far UCF administrators have refused.

For the Amateur Radio Newsline, I’m Mert Garlick, N6AWE.

--

More information is on the web at qrz.com and
http://pegasus.cc.ucf.edu/~wb4tcw/evictimeline.html (qrz.com)

**

ENFORCEMENT: NY COURT DISMISSES HAM SCANNER CASE

Some good news for a New York State ham as a court dismisses a misdemeanor charge against Richard C. Lalone, KC5GAX. This for allegedly for violating an anti-scanner provision that state's Vehicle and Traffic Law.

According to the ARRL Letter, in a 1300-word decision, Judge John J. Hallet said it was clear the legislature never intended the provisions of traffic law

397 from applying to licensed Amateur Radio operators.  He then dismissed the charge against Lalone August 5th.

The law in question prohibits individuals in New York state -- other than law officers -- from equipping their vehicles with radios capable of receiving signals on the frequencies allocated for police use without first securing a permit.  The section also contains an explicit exemption for any person who holds a valid amateur radio operator's license. (ARRL)

**

ENFORCEMENT: FCC ASKS POWER COMPANY TO TRY HARDER TO RESOLVE NOISE COMPLAINTS

The FCC has asked American Electric Power Company of Columbus, Ohio to take a closer look at several power line noise complaints and try harder to resolve them. This in relation to complaints filed by four Amateur Radio operators in Ohio, Indiana and Oklahoma.

According to the ARRL Letter AEP responded February 10th to the FCC's initial correspondence regarding the four cases.  But the agencys’ Special Counsel Riley Hollingsworth says that follow-up reports from the complainants suggest discrepancies exist between what AEP told the FCC and what the complainants report.

Hollingsworth said evidence to date indicates that none of the cases has been satisfactorily resolved.  In one case, AEP erroneously identified the amateur's own antenna as the source of the noise.

Now, Hollingsworth has asked AEP to revisit each of these issues and to update the FCC within 45 days of any progress in each case.  He also referred the power company to ARRL RFI Specialist Mike Gruber, W1MG, for technical assistance.  (ARRL, FCC)

**

ENFORCEMENT:  PAGING FINE

The FCC has affirmed a $9,000 fine against Air Paging, Inc.. This for failure to operate its Wireless Radio Station in accordance with its station authorization, continuous radiation of an unmodulated carrier, and failure to provide station identification by the assigned call sign.

Air Paging did not file a response to the initial Notice of Liability, so the $9,000 figure was affirmed.  In addition, the Commission does not know if Air Paging has corrected the various violations, so Air Paging has been given 30 days to outline what measures it has taken or will take to correct the violations and ensure that they do not recur.  The entire mater is in cyberspace at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-03-2741A1.doc  (CGC)

**

ENFORCEMENT:  TWO MORE TOWER FINES ISSUED

The FCC has issued two more broadcasters hefty fines because of tower related violations. A monetary forfeiture in the amount of $10,000 was issued to Pinnacle Towers, Inc., owner of a tower in Des Moines, Iowa, for failing to clean and repaint its antenna structure to maintain good visibility. Dinged with a $3000 fine is Best Country Broadcasting, LLC, owner of the antenna structure located in Bogalusa, Louisiana. No reason for this fine was mentioned in the FCC digest for the Best Country fine. (CGC)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

INTERNATIONAL - AUSTRALIA: BPL COMING TO VK-LAND

The problem of Broadband over Powerlines or BPL is about to hit dwn-under. This as Australia makes ready to give it a go. Q-News Graham Kemp, VK4BB, has the latest:

--

PLT, PLC, BPL. What ever way you say it it means noise. Now, the Wireless Institute of Australia - Victoria says there is now clear evidence of a PLT-C/PBL push in Australia. That no-one can continue to be in denial mode.

>From the Q-NEWS perspective Barry VK2AAB will no longer be a "voice in the wilderness." Many of us will soon be asking "why didn't we act sooner".

You'll recall months ago we mentioned the little units being sold by DSE. Well these are small fry compared to the same basics being applied to our 240 volt mains supply, or worse, the High voltage distribution system.

--

It appears as id BPL is quickly becoming a world-wide problem for Amateur Radio. (Q-News)

**

RADIO LAW FOLLOW-UP: NEVADA TOLD TO SCRAP NEW RADIO SYSTEM

Here’s a follow up on a story we brought to you several months ago regarding a new state wide radio system in Nevada and an oversight by the regulators planning it. As previousy reported, the Nevada Highway Patrol had spent $14 million on a contract with Motorola to build a computerized radio system. It was activated back in 2000 but nobody from the state ever applied to the FCC for licenses for the frequencies. As a result, the FCC had told the Nevada Highway Patrol and other state agencies to stop using the 140 frequencies by last June.

To comply with the federal order, Nevada has had to scrap a costly radio system that's less than two yeas old. So on Tuesday, September 9th the Nevada state Board of Examiners voted to spend $16.1 million on new radio gear for the Nevada Highway Patrol. (Published news reports)

**

NAMES IN THE NEWS: W4FAL AND K2AD ELECTED NEW NFCC DIRECTORS

Some names in the news. They are Frank Lynch, W4FAL and Doug Sharp, K2AD who have been elected as Directors of the National Frequency Coordinators Council.

The NFCC made known the results on September 6th. This, after twenty-eigh of its member councils took part in the vote.

The National Frequency Coordinators Council is an umbrella group of recognized repeater coordinators. It was formed as the result of a meeting held in St. Charls Missouri in the late 1990’s. (ARNewsline(tm))

**

HAMFESTS AND CONVENTIONS: QUEENSLAND AUSTRALIA ON SEPTEMBER 19-21

On the hamfest scene, the 30th annual North Queensland Amateur Radio Convention takes place September 19th to the 21st. The venue is down-under at James Cook University in the state of Queensland Australia. For details please e-mail vk4zz@wia.org.au (Q-News)

**

HAMFESTS AND CONVENTIONS: THE DX BASH IN TEXAS IN OCTOBER

Back on this side of the Pacific, the 13th Annual DX BASH will be held on Oct 10th to the 11 at Lake Buchanan near Austin, Texas. Icom has provided a IC-746 Pro and IC-756 Pro II that will be in use at the W5KFT contest station for attendees to try out in actual "on the air" conditions. Also planned are programs on operating, contesting, towers and antennas. More nformation is on-line at www.dxbash.com (W5KFT)

**

SWL-FESTS: SCADS IN HUNTINGTON BEACH IN SEPTEMBER

And short-wave hobbyists, this one is for you. Word that the Annual Southern

California Area D-X’ers Picnic will be held on September 20th from 8am to 4pm. This, at the Huntington Beach Central Park in Huntington Beach California.

Huntington Beach is a suburb of Los Angeles. Further information available from Stewart MacKenzie, WDX6AA, at 714-846-1685 from about 9 a.m. to 8 p.m. - Pacific coast time. (SCADS)

**

DX

In D-X, if you are waiting for a Q-S-L card for last June’s WB8XX operation on Antigua, you will have to be patient a bit longer. According to Kevin, cards ordered 2 months ago from PY2TNT never did show up and now it appears that the company maybe out of business. Kevin says that the website is suspended and E-mails bounce. WB8XX adds that he will be ordering more cards from a stateside supplier, and will have all of the cards out as soon as the 2nd order arrives. (VHF Reflector)

**

THAT FINAL ITEM: TEACHING HAM RADIO IN ALBANIA

And finaly this week, how would one of you like to teach ham radio in Albania? Yes, we said Albania. Well you can if you know the British Radio Amateur Examination course and like to travel. Here R-S-G-B Newsreader Jeramy Boot, G4NJH, with the rest of the story:

--

A radio amateur lecturer is required to help give a radio amateur course in the Technical University of Tirana, Albania, this coming November. The course will integrate amateur radio communications theory and practice into the University's normal study programme.

The course is organised in coordination with the Ministry of Telecommunications in Albania, in conjunction with the IARU, and using RSGB documentation. Several agencies and companies are providing financial support. The applicant should have experience of
teaching electronics and telecommunications at the amateur radio level in a UK setting. The course material is based on the UK RAE at the Full licence level and will lead to a CEPT-recognised qualification for the successful students. The successful amateur will help to coordinate the other visiting lecturers, and the assignment will take three weeks out of a six-week program.

This is a unique opportunity to join a multi-national amateur radio team helping to create a new group of telecommunication engineers to benefit the Albanian economy. It will provide a rich experience, not to mention the opportunity to operate ZA1A from the hotel in any spare moments.

--

For more details, please contact Roger, G3LQP, by e-mail to g3lqp@aol.com
(GB2RS)

**

Still in the same location on River Drive not too far from what used to be the White Lumber Yard and across street from Wonder Discount store?

>From a 2002 CBS News article on one of President Bush's addresses:

"The president's weekly radio address is a descendant of Franklin D. Roosevelt's fireside chats. It was resurrected by Richard Nixon and perfected by Ronald Reagan and used by Bill Clinton throughout his administration."

The radio address was a natural for Reagan, of course, given his movie/media background and even his radio work early on.

The address is not associated with any particular station or even network. All of the major radio news networks (ABC, CBS, CNNRadio, etc.) feed it on Saturday mornings, and C-SPAN televises it (with just a picture of the president) later that day.

Some stations actually run it in full...mostly all-news or news/talk stations that have some significant news-related programming on Saturdays. We used to air it on "The KFBK Saturday Morning News" in Sacramento when I was co-host...then KFBK discontinued it. The station recently picked it up again, and now airs it at 8:20 AM PT on the show now co-hosted by Marna Davis and Steve Kelley.

I haven't been there in nearly 2 years, so I have no idea if they air the Democratic response or air the address again during the "News at Noon".

Mike

In record company jargon, it means "artists & repertoire" and refers
to executives who decide which artists to record, and what they will
record.  I've never heard it used in radio, although I would never say
categorically that it hasn't been.

Artistry & Repertoire,  the department (and guys) who sign new acts, and sometimes find stuff for them to perform - though that was more in the earlier days than now.

I recommend the novel "A&R" but I can't locate the name of the author right now.  Good insight into that end of the recording industry.

Does anyone have an audio clip of this segment of the show (or the whole show)?  I checked NPR's site, they have the playable segment on Johnny Cash, but not a mention of Daws Butler. I am a big fan of Daws, wish I had read this posting earlier!! I guess if all mpeg files fail, I can bite the bullet and buy the cassette. $24 jeeze louise!!!
Regards,
Tom

Never mind on the previous post of needing the sound file. You can find the clip on the Daws Butler web site, they already have the playable clip.

Hi.

Has anybody heard about the new access radio licences that are about
to be started here in the UK?

How easy are they to get and what sort of costs are involved?

Peter

>>
Why is WOR changing transmitter sites ... again?
>>

The state is taking the site for a freeway.

The new pattern is quite different from the old one, although both are asymmetric, three tower arrays.

WOR is being "ratcheted", even though the move is supposedly within established limits for "walking" an array without such ratcheting.

(Another array design by the same engineer, Cynthia Jacobs, is also being ratcheted, and under the same conditions).

WOR's nulls will be deeper, and will protect "notified" Canadian stations which actually no longer exist.

What a pile of crap!

Encouraged by the info and feedback I got in here recently, I went out and got me a tuner for XM last week.
As I wanted  to listen to it at home and not in a car, I got the  home conversion kit and was able to get it operating easily enough.
I'm getting a first class signal, and am highly delighted with the output they offer.  The ordinary radio will not be much used from now on, I suspect....

One thing did puzzle me, and I wonder if anyone else has experienced this.
I was happily listening to one of the classical music channels when there was suddenly total silence.  Checked that the power supply hadn't failed, and a few minutes later, the sound came back on.
Then a few minutes later, the same thing happened: no music, nothing.
Further investigation revealed that the missus had toddled into the kitchen and operated one of the two microwave ovens.  While this was on, XM was silent.
This microwave is a bit different from the normal, in that it has a voice that echoes keypresses, advises on current state of cooking, time remaining and so on.
The layout of window,  antenna, tuner and microwave are like this:

```
                      T
                                            |
                                            A |
                                              |
                                              |
                                               |
M
```

The window on right faces due east, the microwave sits with its back to a west facing wall very roughly about 15 feet from the tuner, and of course in a separate room with plasterboard and timber  walls separating

```
them.
Can anyone knowledgeable on radio signals and frequencies shed any
light on this?

I believe I'm fortunate in my  present location in this respect:
Texas is fairly flat and there are no mountains to the south east
between here and  the coast, far as I know.

"Rich Wood" <richbwood@earthlink.net> wrote in message

> Not long from now, probably within our lifetimes, the generation after
> her won't know what FM or Satellite Radio is. When I was her age I had
> never seen a 78 or an Edison cylinder until my grandfather showed me
> his collection of them.

I'd say the term "Satellite Radio" will outlast the term "FM". Listeners will always need to consider whether the programming they seek requires a special outdoor antenna, oriented to the sky. They'll want to be aware of which bands offer local weather and commercials, and which offer niche music. But they won't care to know which component of a terrestrial signal was modulated to represent the ones and zeros of digital data. Thus they're likely to say "local radio" and "satellite radio," just as they refer to cable, satellite and local, or "regular" TV.

As you note, content is what matters, and the term "satellite radio" conveys crucial information about what content to expect and how to set about receiving it.  Terms like FM or the truly archaic UHF and VHF do not.

BTW, are you predicting the obsolescence of the terms or the technologies? 78's and Edisons are long out of production, a fate I don't hear you predicting for satellite or FM radio.

Jerome

Panero is president of XM, so your message will be forwarded to a lesser person for reply.  I thought he ought to hear about interest from sight-impaired people.

Post to the newsgroup again if you haven't had a reply within a week.

Bob C.

Entercom has a corporate mandate to roll out RDS. Greater Media has had it almost since the beginning (certainly back before they owned half of those stations; I remember visiting the Magic studios at 330 Stuart six or seven years ago, when they had an RDS-equipped receiver in the lobby as a demonstration). I think I've heard that Infinity is indifferent to RDS at a corporate level, so it may be that whoever is their market manager these days bought a car with an RDS-equipped radio in it, and told the engineers to make it work. (If I ran Oldies I certainly wouldn't want to be without RDS when the closest competition has both RDS and a better signal downtown....)

Looks like Clear Channel and Radio One are the odd broadcasters out in this survey.

Initially, it was entirely instrumental. One day I got a call from Jim Schulke of Schulke Radio Productions asking me to recommend 100 vocals that might be usable in the format. Other syndicators were beginning to use a vocal or 2 an hour.

Depending on the syndicator and the flavor of the format it could vary. At TM Programming we had 2 1/2 24/7 formats. The 1/2 was specifically for WCFL, Chicago.

One was a "matched flow" where an entire segment was played and the other was "category" where different categories would be mixed within a segment. That tended to use more vocals.

Most of the early stuff was "standards" where nearly everyone knew the lyrics even though the cut was instrumental.

If you are interested, I hang out with mostly blind people
on the net, and they are experts at all the screen readers available,
customizing them, etc.  If you have a DOS IRC program,  I can tell
you where we hang out.  If you would prefer,  since they operate their
own radio network, I can get you the phone numbers and you can call
and talk to the show hosts.

Charles Hobbs <chobbs@socal.rr.com> had written:

```
|
| "Spam with an antenna".
```

I like that description. I'll have to remember it.

The Conventional Wisdom Crowd (you know, the folks who claim that "radio's never been better") ignores this quite obvious sign of radio's declining economic health: they're stooping to the radio equivalent of spam as a source of revenues. Another sign: Wal-Mart doesn't advertise on radio. Not that I think Wal-Mart is so wonderful, but that's a company that's smart enough to figure out what works to meet its goals and that will do what it takes to meet its goals. Radio is obviously not a part of that picture, while other media are.

```

It seems like in the Dallas market, every local talk host and news reporter does testimonial ads where THEY JUST HAPPENED to be a user of that company's

auto leasing
eat-all-you-want-and-still-lose-weight diet product
laser eye surgery
contact lenses by mail
foundation leveling
aluminum siding
storm windows
solar-tube skylights
baldness cures
hair transplant doctors
impotence cures
stomach staple doctors
stop smoking patches
stop smoking and lose weight hypnotists
fitness centers
carpet cleaning
wood floor installers

Some of these testimonials are mutually exclusive.  One local host sprouted profanity at a listener who saw him at a station sponsored event and mentioned that he didn't look like he had lost 35 lbs like he claimed on the radio.

A good number of these products are under investigation for fraud at the very time they stations are still running their spots. They only time some of these spots abuptly STOPPED was when Body Solutions went bankrupt owing the stations lots of money.

How will radio ever have any credibility while doing these
practices?

It does now. In 50 years, who knows?

> BTW, are you predicting the obsolescence of the terms or the technologies?
> 78's and Edisons are long out of production, a fate I don't hear you predicting
> for satellite or FM radio.

The pace of technology is so fast that what once took a century might happen in 5 years. That's why content will always be the driving force. I do believe there will be some sort of localized "radio" of some kind. There will never be an end for the need to know what's happening around you as we discovered during the blackout.

I see fiber playing a greater part in a world of conflict. Satellites are, literally, sitting ducks. If the Cold War had continued I'd have no doubt there'd be a plan to cripple our satellite communications. At some point, I see networks going back to land lines.

One day Pago Pago will have nuclear missiles or space vehicles capable of playing bumper cars with our satellites. We'll be at war, again, as President Ulysses Rumsfeld tells us we're winning the war. Victory is at hand.

Rich

Frank Provasek <ropertex@ix.netcom.com> wrote:

> Some of these testimonials are mutually exclusive. One local host sprouted profanity at a listener who saw him at a station sponsored event and mentioned that he didn't look like he had lost 35 lbs like he claimed on the radio.

Well, that's pretty subjective. I don't buy weight loss products based on "testimonials" on the radio anyhow. :)

Clear Channel in Cleveland used to do this when I lived there, but they didn't go over the top. The personalities only "personally" endorsed a few products, and only one of each type, so when Jen the morning show producer said she was driving a car she bought at *mumble* (I forget which dealer) it was pretty easy to believe her.

I forget which weight loss product was "personally" promoted by at least one personality from each big radio station, but there was one. Bill Lewis of WNCX-FM was one of the people promoting the product. My brother saw Bill and said he did actually look like he lost a significant amount of weight, so maybe there was something to the claim...

> They only time some of these spots abuptly STOPPED was when Body Solutions went bankrupt owing the stations lots of money.

Body Solutions. Yeah, that's the product which had one jock at each radio station promoting it.

Were it not for WPOC in Baltimore and WBIG in D.C., I'd almost think
that Clear Channel had something *against* RDS.  RDS was used at WMZQ
back when it was owned by Chancellor - abruptly disabled when bought by

Clear Channel; the same for WWDC and WGAY (now WIHT). Can anyone recall what other D.C./Baltimore stations were running with RDS that now have it disabled?

Bonneville seems to have bought into the idea recently. WGMS has been using RDS for several years now, as has WTOP-FM. They recently (within the last six months) RDS enabled WWZZ as well.

Infinity uses RDS on WHFS, WQSR and WMMX, but nowhere else I can detect in the Baltimore/Washington markets - so it still seems a little hit and miss.

Best,

Jeremy Powell

Not to launch another AM Stereo flame war but...

I've noticed that WPGC (1580 AM) runs with C-Quam during their daytime
50Kw authorization, but then drops the C-Quam when they lower power (to
270 watts!) and change their pattern at night.

I live within 10 miles of their plant (but still inside the pattern), so
I'm not entire certain that they actually turn off the C-Quam or if the
signal is merely so poor that C-quam just isn't possible.

What would be the advantages of disabling C-Quam during protected hours?

Thanks,

Jeremy Powell

Actually, Wal*Mart has advertised regularly on Paul Harvey, so they do some radio advertising, albeit strictly confined.  I guess you gotta know where they can deliver a clean pitch....

BTW, the affiliate list on the official Paul Harvey website still lists WDAF(AM) as their affiliate here in Kansas City.

For those that don't know, the "61 Country" format has moved over to the former KCIY(FM) on 106.5.  They have changed calls to WDAF-FM.

I should also note as part of the move to FM, the top-of-the-hour newscasts are at :55, before the ID.  Therefore, Paul Harvey is now at 12:00 noon, rather than the advertised 12:06, and the Rest of the Story is at 5:30.

Eventually, the AM will become sportstalk "61 Sports."  Supposedly, the KMBZ sportstalk staff will move across the hall, although supposedly Soren Petro doesn't want anything to do with it.

I'd LOVE to get me some of those tapes. I've always been a big fan of the BM/E-Z format. What happened to all that music and those companies?

Wish that stuff were for sale somewhere.

Just a guess, but they may use 2 different transmitters...one for days, and one for nights, given the large discrepancy between operating power levels. Heck, the control circuits of the high-power 50 kW xmtr probably use more than 270 watts of AC power just running in standby !!  In any case, it may be as simple as the low-power transmitter not being equipped with a C-QUAM exciter (or it not being in working condition) ..... and judged not to be worth the $$ it would take to repair/replace/install in the first place.

Curious:  When did WETA and WPFW actually have RDS enabled?  I don't recall ever seeing that.

As for WGTS;  I'll run out to my truck at lunch time and let you know. The last time I checked they still were running with it.  Do they have any association with (like formatted)WAVA?  As a side note - WAVA is running with RDS as  well.

Jeremy

Doh!  This had never occurred to me for some reason.  At 270 watts, in a city as RF noisy as Washington D.C., I can't imagine that they'd have a huge listenship at night in the first place - so the financials probably don't make sense to maintain the C-Quam at night.

Which begs the question: why don't these stations just throw in the towel for the after sunset crowd?  Are they really generating enough revenue with their non-existant nighttime numbers to justify the AC for the xtmr? I can't count a half dozen stations in the D.C./Baltimore markets that *barely* cover their C.O. at night. And turning down all those pip-squeak stations at night *just* might lower the noise floor for everybody else...

How do AM stations with sunset flea power price their overnight inventory? Surely the sales team doesn't price these spots the same as a daypart spot, right?

WETA was an RDS faithful until their chief engineer went to work for XM about two years ago, + or -. They even had AF to allow automatic switching to WETH. IIRC, they had RDS during their early IBOC testing.

I'm pretty sure that WPFW had RDS, turning it off quite a while ago during one of the Pacifica bloodlettings.

Here is my RDS list from a number of years ago with those still using RDS in June 2001 marked with *

A 5 watt nighttime station on AM 74 in Cambridge, Mass. does cover Boston
and Cambridge quite well..

Why is Washington DC so RF noisy?

> markets that *barely* cover their C.O. at night. And turning down all
> those pip-squeak stations at night *just* might lower the noise floor
> for everybody else...

Correct.  It might.  However these stations are under the impression that
they have listeners even during the daytime - period.

Hello everyone,

Perhaps several of you offshore radio fans have made a round trip from
Scheveningen to the Radioships off the Dutch coast.
If you made the trip on the mv. Dolfijn you might be on this clip.That you
can watch. See yourselve from a Mebo 2 point of view.
And a specially for this weekend you can download the last programme of the
Int. Service of R.N.I. on August 30th. 1974. And the last programme of
R.N.I. on august 31st.1974.
All this and more on www.rni220.nl

Have fun;

Peter F.

Since April 2001 they are WIHT - hot.  Owned by CC.

Quoting from DCRTV.com:  http://www.dcrtv.net/mediawf.html

99.5 WIHT WASHINGTON DC contemporary
In April 2001 station owner Clear Channel flipped 99.5 from "Jammin' Oldies" to a "hot" rhythmic urbanish contemporary hit format. The WJMO calls became WIHT. The urban oldies format (as WJMO) only lasted two years - being born in April 1999. Before that, 99.5 spent more than three decades playing relaxing music as WGAY. WGAY played a laid back mix of adult contemporary tunes which evolved from elevator music of the 1970s. The old WGAY of the 1960s and 1970s was the ultimate "relaaaaaxing" elevator music station. Its ads featured station programmer Bob Chandler leaning way back in a recliner with his station's "easy" music playing in the background. For a while in the early 1990s, WGAY switched its calls and became "Bright 99.5" WEBR, but listeners didn't accept the more up-tempo music. Clear Channel owns WIHT. The first station on this frequency was WCFM, owned by the Cooperative Broadcasting Association. The station went dark for a while before WGAY arrived.
============================
Also from DCRTV:

July 21, 2003   PGC's 1st Again, TOP Jumps To 2nd

Once again urban WPGC-FM was in 1st place (up from winter's 2nd) in the spring Arbitron quarterly radio ratings for DC, out on 7/21. In the overall age 12+ numbers, all-news WTOP placed 2nd (up from 3rd). Adult urban WMMJ ranked 3rd (down from 1st), with adult urban WHUR 4th (up from 6th), urban WKYS 5th (down from 4th), classical WGMS 6th (down from 4th), news talk WMAL 7th (holding level), smooth jazz WJZW 8th (up from 9th), with a tie for 9th between country WMZQ (up from 13th) and oldies WBIG (up from 12th). Hot talk WJFK-FM was 11th (up from 14th), hot adult contemporary WRQX 12th (down from 8th), rhythmic contemporary WIHT 13th (down from 11th), adult contemporary WASH 14th (down from 9th) in a tie with rocker WWDC (up from 16th).

[My comment -- WMMJ is a Class A station, the rest of the FMs are B.]

Radio One. The AM calls are still in Cleveland (my alma mater in radio, in
fact) and the FM is in Richmond, VA.

Muzak and similar providers of ambient music continue to program Beautiful
Music for controlled environments. Any radio stations doing
instrumental-based formats (excluding "soft jazz")  are generally using 60's
and 70's material.

The radio syndicators like Churchill, Shulke, Bonneville, Kalamusic, TM, RPM, IGM, Peters, etc. mostly closed in the early to mid 80's when the format ceased to be demographically attractive to advertisers. I had a company that syndicated to Latin America with nearly 80 stations at one point; the format evaporated in that area in about 1987 and I sold the library to a station in Lima that continued the format for a few more years.

Even the "roll your own" stations like Jerry Lee's station in Philadelphia went to soft AC in that same period.

When did the I-Man start doing the show in Spanish? :-)

Is the the anglo-talk format the current stuff or is this what it will be switching to?

CRN is still selling off its stations?  WOW

I thought Catholic Radio Network was long gone. That's one system I was glad when it went belly up.  They sold their Chicago station to Radio Unica I think -- or was it One-On-One Sports (now Sporting News Radio)?

CRN was going to buy AM 1660/Jersey City, NJ (in Elizabeth, NJ back then).  The call letters were to be WBAH.  No kidding!

Wonder if it was supposed be similar to the noise that sheep make: BAHHHH...

Radio Unica (the current owner of AM 1660) wisely changed those calls to WWRU.

C-Quam is very sensitive to co-channel interference. At 270 watts
they'd be vulnerable to every signal. The resulting platform motion
would make every listener run for their barf bags.

I think some of it was released on vinyl years ago. It would have been
the custom stuff.

A friend of mine has all the SRP tapes. Unfortunately, they're too old
and the oxide comes off as it's played. We were hoping to dub them to
CD to save them, but it didn't work.

Anglo is current. Brokered to gain clearance "in LA" for some syndicated
shows.

Look at www.radiovisa.com for an idea about the upcoming change.

Correct. I don't have access to Muzak ever since they discontinued
FM-Subcarrier service shortly after the beginning of 2003.

I have Music Choice on home via the cable TV. The BM/EZ channel does
have some new stuff - I think the latest I've heard is light 80s pop
done instrumental. It's not bad at all...

I guess I'll have to stick with the cassette player hooked up to the
cable box. I was just wondering if there was something commercially
available besides 101 Strings.... :-)

"The Radio Crazy" !!! It's back!

Partial interest in AM station in PA for sale. Joint venture. (If you venture, Dude, you go to the joint! Hi!)

Cheap! Full price is $25,000. 10,000 watts days, 100 watts nights, DA-2, two towers. Low dial spot.

Active or inactive investors with at least $5,000 each are welcome. No "AM bashers" or negative "nabobs" welcome. Queer Channel types not welcome at all! Those greedy morons will crash under their own greed and dead weight. You know who I really mean!

Upon your showing of interest and financial qualifications I will gladly disclose the call letters and city of license. Also, the name of my parole officer. (Just teasing!)

73,

Meyer Gottesman, W6GIV
Macon, GA
Tel: (478)741-1710.

Simple Just use C-QUAM AM Stereo and everybody benefits -no new radios
required,better sound quality on existing analogue radios and of
course high quality stereo on AMS radios and more cost effective to
implement.

I was under the impression that CRN owned 1660 when it was run by John
Lynch. They bought a few expanded band stations.

I think Muzak may still be recording the stuff. They often shared
recording sessions with us. We left. They came in. The orchestra
stayed put.

> Muzak and similar providers of ambient music continue to program Beautiful
> Music for controlled environments.

There's a fast food restaurant in my area that plays Muzak as the background music.  It is all instrumental versions (absolutely no vocals) of pop music hits, with somewhat of a "rocky" feel, with guitars, keyboards, and drums -- unlike what I consider to be traditional Beautiful Music, which predominantly features lush orchestral arrangements, heavy on the strings.

Anyway, Muzak has conquered and instrumentalized all sorts of pop music -- I've even heard them do songs like No Doubt's "Don't Speak", and they're probably done most of the Backstreet Boys and 'N Sync hits.

The market share for Muzak has to be dropping, though; it used to be commonplace in supermarkets, department stores, and restaurants, but now all but the most "snooty" establishments (where vocal music would be seen as "inappropriate") have replaced it with a generic AC-type format -- which in itself is a whole other discussion, because I've heard this background-music form of AC play a *much* wider variety of songs than what you hear on the radio, including many songs which didn't even make the Top 40 chart, as well as many album tracks which were never released for radio airplay.

WTAO, then WCAS, then WJIB has always had an amazing signal for its power. I worked for WACE, Chicopee (Springfield, MA) on 730 with 5kw days. If we went off the air, WTAO would bomb in (over 100 miles) daytime.

The FM was WXHR which became WJIB(FM), then something else, then something else and is now WTKK. I worked there when it was WJIB. I recorded the bells. I'd love to get the master.

Rich

You are in the tail end of what in radio is called 'the sales demo.'  When you look at the specifications that ad agencies put on their buys, you find that about 80% are for 25-54 or some part of this. The remainder is fror 12-24, 18-24 and a bit of 35-64 or 45-64.

That ads reach you does not mean you were specifically targeted. It just means that the media you consume have efficiency in reaching the primary demo advertisers usually want.

> I may be an Old Fart (and proud of it!), but that doesn't mean I don't still choose between McDonald's and Wendy's, or between Ford and GM, or between Coke and Pepsi.  AAMOF, I recently switched from Coke Classic to Pepsi One.  Needed a sugar-free alternative to the Coke I've preferred all my life, and never cared that much for Diet Coke's aftertaste.  So I ignored brand loyalty and went with the product I liked better.  I suppose that means I can still be swayed by advertising if I find the product itself suitable.

You are using principally anecdotal and personal cases. The studied behaviour of 55+ and 65+ consumers shows a poor ROI on ad investment except where the product has no past preferences, such as a product used only by older folks.

> > Since these decisions are made by marketers at P&G and Ford and Budweiser, there is no way individeual stasitons or groups can possibly get through at that level... in fact, demographics were probably considered in procut design.
>
> I never said otherwise.  But the radio stations I listen to generally carry advertising that's aimed at adults, often at middle-aged and older adults rather than young ones.  Advertise anything you want on a CHR station, I'll never hear it.  Advertise Clearasil or The Gap on an oldies or news-talk station, you're wasting money.

Yet there are many exceptions. Many non-ethnic CHRs get excellent 25-34 female numbers. News stations deliver comeptitive 35-54, even if half the audience is older.

> > Those who do target 55+ ususally use specialized magazines (AARP, for example) and special interest publications (like travel magazines, finance magazines, etc.) since they are efficient in reaching 55+ persons.
>
> Tell me, what ISN'T a special-interest magazine?

The average medium US market has maybe 20 viable radio stations. The average magazine rack has hundreds of magazines. That degree of specialization can exist in a national magazine, which may pick up subscribers and readers in tiny quantities locally,  but is "massive" nationaly. Radio sells nearly all its inventory locally, and can not be that specific. there is no "home remodeling radio station."

> > You are an exceptional person in this group. A significant portion of Americans reaching retirement age have savings under $100,000 (think it is

> >90% plus) and will live on $1200 in monthly SS payments.

> (And a few people like me receive Social Security Disability Income
> benefits, but that's not the same as the retirement benefit.)

Most people define retirment age as the time SS kicks in... 62 or 65. while
a few retire earlier, the general definition is probably some vague place
between the late 50's and 60's.
>
> >Most retired

Anecdotes again. It may be online, but Smart Money had an article on
retirement savings about 3 months ago. In it it showed the average savings
of the retirement-age American. And the amount of debt, both revolving
credit and mortgage debt. Most folks in their 60's have scant savings,
considerable debt and not a lot of maneuvering room.
>
>
> Perhaps when you're older you'll understand that a lot of advertisers

You are making assumptions again. How old do I have to be? How old do you
assume I am?

Call it manipulation if you want.  Most go in to business dreaming of becoming the proverbial 400 pound Gorilla of their market.  It's still a legitimate market force.

>That's mobile phones, not broadcast quality audio. Who gives a shit about
>the absolute audio quality of a mobile phone call so long as it is

Look, the fact that I read news groups proves that I'll venture through an awful lot of noise to read an intelligent thread. Likewise, listeners will endure a lot to listen to views or music they find interesting.

>The bottom line is that the broadcasters are abusing their relationship with

>radio stations on DAB in the UK use 128kbps MPEG Layer 2, and Layer 2 was
>supposed to be used at 192kbps for stereo audio streams).

Then turn off your radio.  Find your own music and listen to it.

>The bottom line is that CD-quality on the radio is possible, and given the
>choice between CD-quality or lower quality then the general public would not
>turn down CD-quality.

Possible? Yes. Would the public choose it? That's the question. It largely depends on what choices they have.

>But again the reality is so far away from CD-quality it is just a bad joke.
>On DAB in the UK the audio quality is sub-FM, yet we hear adverts day in day
>out saying crap like "superb digital quality sound" and such like. This is
>an abuse of trust and the broadcasters should be ashamed of themselves that
>they're conning the general public to earn extra profit (for the commercial
>radio groups) or to try to hang on to market share and be seen to be more
>politically correct (for the BBC).

Look, even plain FM stereo could sound much better if the dynamic range weren't so terribly compressed all the time. But most broadcasters are aiming for the middle of the market.

>So basically because companies can get away with mediorcity then that should
>be accepted and applauded?

I say you need to accept it, because it's a fact. I don't applaud it.

>Basically this is all to make a very small number of people a lot richer,
>while the masses have to put up with crap audio quality passed off as
>entertainment.

Well, if you can convince the proletariat that this is the case, and you win enough of their support to your side, you can do something about it.

>But hey, that's capitalism for ya.
>
>Think Enron and Worldcom.

Enron and Worldcom pale in comparison to the graft, mediocrity, and pointless wastes of most governments. It's not about capitalism. It's not about corporations. It's about making a living.

As you pointed out, better audio is possible. So, what's stopping you?

>And it seems one of the main purveyors of medicority in the US is getting a
>bit of a backlash isn't it? Or are the reports about Clear Channel and a
>load of unhappy listeners just bullshit?

It doesn't matter what sells. Some in this group have said they'd play the sounds of roaring chain saws all day long if they could make a good profit from it.

> Doesn't your market have a full service AM? Or, at least, an AM that's

> known for its news?

In Orange County, NY AM is almost dead, especially if you speak English.

Only AM station that is alive and not lights out studio is WTBQ in Warwick.

The rest are canned, lights out remote satellite or microwave feeds or non English speaking.

You are in the tail end of what in radio is called 'the sales demo.'  When you look at the specifications that ad agencies put on their buys, you find that about 80% are for 25-54 or some part of this. The remainder is fror 12-24, 18-24 and a bit of 35-64 or 45-64.

That ads reach you does not mean you were specifically targeted. It just means that the media you consume have efficiency in reaching the primary demo advertisers usually want.

You are using principally anecdotal and personal cases. The studied behaviour of 55+ and 65+ consumers shows a poor ROI on ad investment except where the product has no past preferences, such as a product used only by older folks.
>

> oldies or news-talk station, you're wasting money.

Yet there are many exceptions. Many non-ethnic CHRs get excellent 25-34
female numbers. News stations deliver comeptitive 35-54, even if half the
audience is older.

> >Those who do target 55+ ususually use specialized magazines (AARP, for
> >example) and special interest publications (like travel magazines,
finance
> >magazines, etc.) since they are efficient in reaching 55+ persons.
>
> Tell me, what ISN'T a special-interest magazine?

The average medium US market has maybe 20 viable radio stations. The average
magazine rack has hundreds of magazines. That degree of specialization can
exist in a national magazine, which may pick up subscribers and readers in
tiny quantities locally,  but is "massive" nationaly. Radio sells nearly all
its inventory locally, and can not be that specific. there is no "home
remodeling radio station."

Most people define retirment age as the time SS kicks in... 62 or 65. while
a few retire earlier, the general definition is probably some vague place
between the late 50's and 60's.
>

Anecdotes again. It may be online, but Smart Money had an article on
retirement savings about 3 months ago. In it it showed the average savings
of the retirement-age American. And the amount of debt, both revolving
credit and mortgage debt. Most folks in their 60's have scant savings,

considerable debt and not a lot of maneuvering room.

You are making assumptions again. How old do I have to be? How old do you
assume I am?

Yes. They are bullshit.

Now, substitute " couple"  for " load"  and you would be very near the
truth.

Yes, there's an AM simulcast, but the vast majority of listeners don't even know it exists.  And yes, we are a music station.

Battery operated TV's are not in common use (and yes, I have one, too, but just because I have something, it doesn't mean everyone else does).

Even the TV people admit they were broadcasting to almost no one.

Here's an idea.  Have several friends join Columbia House or some other
record "club" where you "buy 3 at regular prices and get 10 free"  If
this is the deal they are offering, then you'll get 13 CD's for the
price of 3.  Of course, their prices are higher than Wal*Mart...but you
still come out ahead.

TM Century is still probably a better option.  Their GoldDisc library is
VERY extensive, well-put together, and you don't have to buy a whole CD
just to get one song.  Let them know you are an educational facility,
and ask for a discount.

So are you agreeing that broadcast bandwidth is limited or are you saying it's not limited or what the heck is your point.  Are you saying that there is no need to license radio stations?  You're clearly (for once) saying that Clear Channel has 5 to 7 100kW stations in _each_ market which is, of course utter nonsense.

The BEST oldies stream on the web, BAR-NONE, is at
http://www.a-ware.com/live

You will hear songs you haven't heard in years, and it's all put together VERY well.  It's run by a company who sells music scheduling software to radio stations and internet broadcasters around the world.

If you are an oldies fan at ALL, give it a listen.....

It's manipulation.

That doesn't make it acceptable to degrade the audio quality just because
you can in order to make extra profits.

>> The bottom line is that the broadcasters are abusing their

But I wan to listen to certain radio shows. Why should I have to deprive
myself of listening to radio shows just because some man in a suit wants to
squeeze that little extra drop of profit out of the medium? And in so doing
he is actively depriving literally millions of people of an improved
listening experience.

Why can't they just provide decent audio quality anyway?

>> The bottom line is that CD-quality on the radio is possible, and

What, did the middle of the market ask for the dynamic range to be
compressed? Strange people.

How many does it need exactly? Lots of people have commented that the audio
quality isn't good enough. The DAB industry carry on lying. And nothing
changes.

>> But hey, that's capitalism for ya.
>>
>> Think Enron and Worldcom.
>
> Enron and Worldcom pale in comparison to the graft, mediocrity, and

> It's not about corporations.  It's about making a living.

No, this is not just about making a living. If it were then the multiplexes
would not have 10% - 20% of their capacity wasted by the big commercial
radio groups. It's about taking a stance and sticking to it because you can,
and in so doing making your company more profitable at the expense of the
listener.

> As you pointed out, better audio is possible.  So, what's stopping
> you?

Stopping me doing what? Turning on a CD? Nothing. But I can't afford to buy
all the CDs/vinyl to be able to listen to the latest releases because that
would cost about �100 - �200 per week.

>> And it seems one of the main purveyors of medicority in the US is

If we're talking FM stations, I don't know for sure but I think the FMers (what few there were) would have had to sign off. The participating am stations all switched to one of two frequencies (1 high or 1 low) theoretically to confuse enemy "signal tracers" from seeking and destroying transmitters.

I must admit Conelrad was way before my time so I am speaking from "book memory". I hit radio during EBS when the alerts were kill carrier for 5 seconds, back on for 5, off for 5, then back on with a 1khz tone (or at least I think that's how it went).

Really? Is black really white?

> Now, substitute " couple"  for " load"  and you would be very near the

A 'couple' means 2. Are you sure 'load' isn't correct?

>From http://media.guardian.co.uk/mediaguardian/story/0,7558,978052,00.html

"People are flocking from radio in droves," says Michael Bracy, director of government relations at the lobby group the Future of Music Coalition. "So many people have become disenfranchised that they simply don't listen anymore. Smaller local artists are being freezed out by centralised programming. It's very damaging to the culture. There is a climate of fear surrounding Clear Channel. People will say in private, 'They did this or they did that,' but they won't speak out because they have to do business with them.

The bad publicity has made Clear Channel a political pariah. While other parts of the media industry are enjoying the relaxation of ownership laws, in radio, they were tightened up last week, despite the company hiring well-connected Washington lobbyists and appointing a former US congressman to the board."

and

"According to the US ratings service Arbitron, Americans are spending 10% less time listening to radio per annum. Radio listenership in the US is at a 27-year low."

and

"It's creative death, it's standardisation - McDonaldisation. Creativity requires diversity. If you introduce free markets without regulation, you are prescribing monopoly. The only upside to all of this is that it gets so bad that things start to develop underground on the internet or satellite radio. That's what happened with the Floyd."

and from http://www.guardian.co.uk/uk_news/story/0,3604,943068,00.html

"Mr Dyke [Director General of the BBC] directed much of his ammunition against the global media giant Clear Channel, which owns 1,225 radio stations in the US, many of which took a staunchly pro-war line.
"We are genuinely shocked when we discover that the largest radio group in the United States was using its airwaves to organise pro-war rallies," said Mr Dyke, who is also the BBC's editor-in-chief. "We are even more shocked to discover that the same group wants to become a big radio player in the UK."

and there's been a load more stories about Clear Channel in the UK press. I realise that being American that you don't take any interest in non-American issues, but, shock-horror, we do actually look at issues beyond our shores, and especially when Mr Mays might buy a UK radio group in the not too distant future.

In the 60 and 70s every transmitter I worked with had a crystal for
either 640 or 1240. As I recall there were serious requirements to be
part of the system. I think they were an underground studio, generator
at both studio and transmitter and a connection to a local, regional
or federal emergency feed to, I think, Civil Defense.

I don't remember what the testing procedure was because everyone would
have had to switch to their assigned emergency frequency. I'm just not
old enough to remember.

Living in my apartment, I'm in the middle of an electrical noise-fest.
However for those few hours that the power to the entire building was off
(and the spouse's computer and peripherals wasn't running and the
elevators were down), I was able to get a bunch of big stations -- the

usual suspects up here:

WTAM-AM 11, Cleveland; WWVA-AM 1170, Wheeling; CHML-AM 9,
Hamilton Ontario; WTOP-AM 15 Washington DC; WBAL-AM 1090, Baltimore;
CKLW-AM 8, Toronto; etc.

Also suburban rimshotter WVNJ-1160/Oakland NJ was coming in loud and clear for the first time in ages!!!!

Wow!!!!

Maybe we should have a few more blackouts more often!!! :-)

I was just getting started in the business in 1970. I was working at a station on 1260 kHz. The way I remember it, was that they were to go to Conelrad 1240 in case of national emergency. They had been provided with a government surplus generator, and were obligated to keep it operational.

<info@REMOVEALLTHISdigitalradiotech.co.uk> wrote:

>"People are flocking from radio in droves," says Michael Bracy, director of
>government relations at the lobby group the Future of Music Coalition.

Will someone post some research that supports this? What makes Mr. Bracy an expert on the status of radio?

It would seem to me that, if they're "flocking from radio in droves," it should be in his best interest. Now they'll have to buy the product either on CD or MP3. The rest will either not listen or steal it.

I think it would be more appropriate to say new generations aren't being attracted to radio because of the vast number of alternatives.

>"So many people have become disenfranchised that they simply don't listen
>anymore. Smaller local artists are being freezed out by centralised
>programming.

Smaller groups have been squeezed out of the business in all of the 43 years I've been in it. That's long before Clear Channel owned much more than a station in San Antonio.  Some college stations had local talent programming but very few commercial stations ever did it. They played the hits. And ... did you know that all the hit artists were local at one time? It didn't seem to hurt them.

>It's very damaging to the culture.

You mean I'm culture-starved because I can't hear the latest manufactured boy band?

>There is a climate of fear
>surrounding Clear Channel. People will say in private, 'They did this or
>they did that,' but they won't speak out because they have to do business
>with them.

As long as they say it in private, no improvement will come. Of course, they'd better have proof that will stand up in court. Do it the good ol' American way. Sue them. I've heard local promoters complain that Clear Channel pays more. I can't fault the artist for going where the money is. Let's see Mr. Bracy get all the big artists together to boycott Clear Channel. If no one will perform for them, the problem is solved. Then the only problem left is how to harvest the green cheese on the moon.

>The bad publicity has made Clear Channel a political pariah. While other
>parts of the media industry are enjoying the relaxation of ownership laws,
>in radio, they were tightened up last week, despite the company hiring
>well-connected Washington lobbyists and appointing a former US congressman
>to the board."

Radio ownership rules were tightened? I was under the impression that TV was returned to 35%. There have been many instances where Clear Channel was prevented from buying because of the rules. This isn't new.

>"According to the US ratings service Arbitron, Americans are spending 10%
>less time listening to radio per annum. Radio listenership in the US is at a
>27-year low."

I seriously doubt the increase in population over 27 years and the explosion of alternative sources of music were included. 27 years ago I didn't have a minidisc player, a CD player, an MP3 player, a DVD portable, or even low quality Internet streaming competing for attention.

>"It's creative death, it's standardisation - McDonaldisation. Creativity
>requires diversity.

Mr. Bracy needs to look at the dirt in his own house. Where does all this sameness come from? Instead of blaming radio he should look at the quality of the stuff oozing from the record companies, big and small.

>If you introduce free markets without regulation, you
>are prescribing monopoly. The only upside to all of this is that it gets so
>bad that things start to develop underground on the internet or satellite
>radio. That's what happened with the Floyd."

Satellite radio isn't going to lead the way in local artists. They aren't local. Satellite radio should be Mr. Bracy's vision of Hell.

>"Mr Dyke [Director General of the BBC] directed much of his ammunition
>against the global media giant Clear Channel, which owns 1,225 radio
>stations in the US, many of which took a staunchly pro-war line.
>"We are genuinely shocked when we discover that the largest radio group in
>the United States was using its airwaves to organise pro-war rallies," said
>Mr Dyke, who is also the BBC's editor-in-chief. "We are even more shocked to
>discover that the same group wants to become a big radio player in the UK."

Mr. Dyke is in the dark. Individual stations made those decisions, not the company. I realize it's not in his best interest to accept that, but it's true. If it were a company directive there would have been 1225 rallies - one for each station even in markets with multiple stations. They still compete.

Of course, the BBC has no interest in American audiences. I would be "genuinely shocked" to discover that the BBC wanted to exploit Americans when they don't even speak our language. Who ever heard of a bonnet on a car? My home has a john, not a loo.

>and there's been a load more stories about Clear Channel in the UK press. I
>realise that being American that you don't take any interest in non-American
>issues, but, shock-horror, we do actually look at issues beyond our shores,

>and especially when Mr Mays might buy a UK radio group in the not too
>distant future.

I think the UK said something similar when Rupert Murdoch launched Sky TV and the sky fell again when he bought British newspapers.

If we don't look beyond our shores we should be able to stop all those humanitarian aid programs that cost us so much. I'm sorry we have such little interest in the goings on with the Royal Family. I guess Mr. Dyke doesn't read the New York Times. It appears to me that the first section of the paper is heavily International. The evening news and PBS' newscasts seem to cover a lot of "foreign" news.

Mr. Dyke also doesn't seem to realize that covering 50 states is probably more difficult than covering 50 countries. After all, those of us in the 50 states have more in common than his 50 countries. We all speak a similar language. After a while, even war isn't news when it's been going on for decades, or centuries. Maybe he's feeling bad because the UK used to own most of those countries.

Let's get the Middle East fixed before he complains about how uncaring we Americans are. Maybe we're just too damned tired of watching those "across the pond" fight each other endlessly.They've been taking over each other's countries for centuries and dressing their men in ridiculous looking costumes. Isn't there something more productive they could be doing?

640 and 1240. Local areas or markets had stations assigned to one of the two, and they would cycle on or off to further confuse RDF usage of signals.

The entire national system was tested several times in the early 60's, with nothing on any channel except 640 and 1240 for a half-hour around 11 AM on a weekday.

Then something went wrong because cell service faded away within a few hours As soon as the electricity went back on , so did the cell service.

I spent a lot of time walking through the city that night and my cell phone had no signal indicator and that handset with the slash through it. The display said "no service."

When my cell phone tells me I have no service I believe it. The bill has been paid in full.

I'm old enough to remember.  At the class 1B clear channel station I worked at our 10 kw auxiliary transmitter had a bunch of components that had to be jumpered and/or added.  We would test it into the dummy load after we set it up on 1240.  There was a large manual denoting the changes that had to be made.  There was also an area test where we would get an alert from the Conelrad control point and we would have to set the aux to 1240 and turn its control over the the control point and then they would test for a half hour or so.  On for 30-60 seconds and off for 3-4 minutes in a random pattern.  I think this was the only exception to the union contract that we could do anything except take meter readings without a supervisor there.  Of course we took about 100 meter readings and then typed them into the official log every 1/2 hour.

Later at a EBS (what was it now CSPS??-1) main station we had a 35 kw generator and 1500 gallons of diesel fuel, console, turntable, cart machines, tape machines and at least 30 days of food at the transmitter with walls 24 inches thick (8" block, 8" reinforced concrete, 8" block sealed and air conditioned.  We also had two way radios between us and the State Police and the local County Sheriff/FEMA office.  FCC (for FEMA I believe) came out every so often to check out our EBS readiness. Even the food and the other ends of the two way radios to be sure the links worked.  Everything was also (supposedly) protected from EMP.

I asked one day how much notice we would have to man the site in the event of an attack and was told about 15 minutes and I said "Oh good! It takes me 20 minutes to get there from the studios in an emergency". The FEMA guy just shook his head and smiled.....

</head>
<body>
       I'm old enough to remember. &nbsp;At the class 1B clear channel station
I worked at our 10 kw auxiliary transmitter had a bunch of components that
had to be jumpered and/or added. &nbsp;We would test it into the dummy load after
we set it up on 1240. &nbsp;There was a large manual denoting the changes that
had to be made. &nbsp;There was also an area test where we would get an alert
from the Conelrad control point and we would have to set the aux to 1240
and turn its control over the the control point and then they would test
for a half hour or so. &nbsp;On for 30-60 seconds and off for 3-4 minutes in a
random pattern. &nbsp;I think this was the only exception to the union contract
that we could do anything except take meter readings without a supervisor
there. &nbsp;Of course we took about 100 meter readings and then typed them into
the official log every 1/2 hour.<br>
```

```
 <br>
 Later at a EBS (what was it now CSPS??-1) main station we had a 35 kw generator
and 1500 gallons of diesel fuel, console, turntable, cart machines, tape machines
and at least 30 days of food at the transmitter with walls 24 inches thick
(8" block, 8" reinforced concrete, 8" block sealed and air conditioned. &nbsp;We
also had two way radios between us and the State Police and the local County
Sheriff/FEMA office. &nbsp;FCC (for FEMA I believe) came out every so often to
check out our EBS readiness. &nbsp;Even the food and the other ends of the two
way radios to be sure the links worked. &nbsp;Everything was also (supposedly)
protected from EMP. &nbsp;<br>
<br>
I asked one day how much notice we would have to man the site in the event
of an attack and was told about 15 minutes and I said "Oh good! &nbsp;It takes
me 20 minutes to get there from the studios in an emergency". &nbsp;The FEMA guy
just shook his head and smiled.....<br>
<br>

  <pre wrap=""><!---->
In the 60 and 70s every transmitter I worked with had a crystal for
either 640 or 1240. As I recall there were serious requirements to be
part of the system. I think they were an underground studio, generator
at both studio and transmitter and a connection to a local, regional
or federal emergency feed to, I think, Civil Defense.

I don't remember what the testing procedure was because everyone would
have had to switch to their assigned emergency frequency. I'm just not
old enough to remember.

Not lacking in news.. but lacking in local news.

There is a difference. Do I really care that the subway is broke in NYC when no friend or family lives or works in NYC...  or am I more interested to know that I-84 has a backup up for 10 miles at the Newburgh-Beacon Bridge because a tractor trailer full of hazmat dumped at a toll booth? (hint, I-84 can be seen from my backyard)

Rockland County's answer to the problem was to install reverse 911 systems and create a network of low power AM stations on TIS freqs to warn the public.

Most NYC stations don't know life exists north of Yonkers.

Canned national satellite feeds on local stations that do not break in with local issues don't count.

It takes a local axe murder to get coverage from NYC stations up here.

A concern of privacy over the Internet is that people will steal packets going from one IP address to another one.

Perhaps someone could illuminate me here.  Wouldn't it be possible to use this ability to have a cheap way to broadcast sound or video over the Net to a large number of people, without taxing bandwidth?  It would be unidirectional, but so is radio and television broadcasting. Have one machine do streaming audio and video in an unsecure VPN and have other people "tune into" this network and pull the stream packets off the network.

If anyone has more information on this than I, can you fill in the blanks for me.

Thank you for your time...

I guess you pulled some of those stations in at night.  I can't imagine Cleveland to NYC in the daytime.

BTW, CKLW is in Windsor..not Toronto (unless I missed a big switch somewhere)

Rich, I have posted numerous times some figures coming from studies done in the early 50's showing radio listening per average American to be 21 hours. Today, radio listening per person is, per the Winter book, 20 hours 45 minutes a week. There was a peak in listening in the late part of the 80's, but this may have been as much due to more accurate measurement of minorities as anything else. The fact is that radio listening is very consistent.

> It would seem to me that, if they're "flocking from radio in droves,"

The art of the non sequitur seems to have been perfected at the RIAA under Hilary Rosen, and it has propagated itself to other music industry spokesrobots who have no idea how to address the change in technology that is eating them alive.

> I think it would be more appropriate to say new generations aren't

Yet the listenership is amazingly stable despite everything form the Internet to satellite TV and Game Boys.
>
> >It's very damaging to the culture.
>

Not only that, but what an absolutely dumb statement this goofball made. I just wonder how everything from the classics to opera could have made it prior to 1922 without radio. First they claim that radio is not being listened to, and then claim radio is essential to making hits.

> attention.

One interesting explanation my director of research came up with is the fact that the average American is working more hours a week than when listening was at its greatest peak, in the 1987-1988 Arbitrons. Whatever the issue, as high a percentage of Americans liten to radio as ever.

Anyone here remember the "Your Hit Parade" TV show of the late 50's with

Snooky Lanson, Dorothy Collins, etc? The four staff singers of this national show did their versions of the week's top songs "all across America." Hits are nearly 100% national, and always have been. And a drive around the US in the late 50's or early 60's would have revealed hundreds and hundreds of clones of the work of Bill Stewart, Todd Storz and Gordon McLendon. Sameness? We are all Americans and tend to like the same music, same Big Macs and same Gap clothing across the nation.
>

It's interesting how the staid Bebe spawned pirate radio and was forced, screaming, into contemporary radio when they realized folks would tolerate bad signals form ships or from Luxembourg just so as to not have to listen to the BBC. I wonder what radio listening figures were in the UK before radio "relaxed."

I remember one such test in 1961, it lasted most of the afternoon.

I don't remember it. I'm too young, though my mother told me about it. However, its Producer was my TV Production professor at Emerson College. He gave me an A+. Good guy. Until a few years ago I used to see him doing commercials, usually as a butler. He had that elegant look.

It's also been my experience that playlists through the years have been similar thoughout the country. Rotations might change a bit, but the library of songs was, essentially, the same nearly everywhere.

I recall buying a report on station playlists around the country in 1988 for WPIX-FM. The lists were amazingly similar. It appears "cookie cutter" is an historical term.

>It's interesting how the staid Bebe spawned pirate radio and was forced,

I was offered several jobs in London when independent radio was legalized. Clearly the BBC was horrified. I recall meeting one of the founders of Radio Caroline some years later. His stories of the BBC's efforts to stop this enthralled me. Take the NAB's efforts against LPFM and multiply them many times. According to him, International waters meant nothing to the UK when it came to better programming than the BBC. Can't have that. Mrs. Farquars's Dog Training Hour was a better service than that awful rock and roll.

> Cleveland to NYC in the daytime.

Yes. Correct, at night. That's when I do the bulk of my "real" radio listening -- as opposed to having a local FM station (or FM Subcarrier at times) at work for background music & talk.

> BTW, CKLW is in Windsor..not Toronto (unless I missed a big switch

D'OH!!!

Correction noted. I was thinking of the other big Canadian station I like -- AM 74 in Toronto with pop standards.

You're absolutely correct -- the Big 8 is in Windsor.

I would guess that hundreds of thousands of people stranded in
sweltering heat underground is a bigger story for a New York station
than a traffic backup on I-84. That day traffic was backed up
everywhere. Friends who live in New Jersey took as long as 12 hours to
make a trip that normally lasts less than 40 minutes on a bad day.

>Most NYC stations don't know life exists north of Yonkers.

Are they supposed to? Your issue is with traffic. I recall lots of
Yonkers coverage when low income housing was proposed and the city
made lots of nimby noise.

It's rare that bedroom communities generate a lot of news. We do hear
about murders of wealthy people We still hear news about ugly,
self-centered, insensitive,  PR socialite Lizzie Grubman running down
the rich and famous at a trendy nightclub on Long Island. Very, very
important news here in the city. She now has a radio show, giggly
gossip about terribly important rich people. I always tell people to
put your latest conviction at the top of your resume.

>It takes a local axe murder to get coverage from NYC stations up here.

Unfortunately, that's news.

That's not our experience in New York. On 9/11 WINS had an AQH of more than 900,000. I can't help it if they're too dumb to figure out how to change bands on their radios. WCBS had an AQH of more than 300,000. Both are awesome figures.

These figures came directly from an Arbitron representative at an R&R Talk convention. Such figures had never been seen before.

Maybe all those people didn't realize they were listening to AM stations.

You children don't seem to remember the "Fitch Bandwagon" from the late 30s
/ early 40s.  Songs were "sung so clearly you can understand every word".
Wasn't Larry Clinton the band leader and Bea Wain one of the vocalists?
Clearly hits were thought to be national back then.

I'm looking for a list of affiliates -- I know he's got one in Buffalo,
one in the NYS Capital District (Albany, Schen., Troy) and he says one in
Los ANgeles.  The Baltimore affil (AM 68) is gone.

The WOR Radio Net. used to have lists of affils by state for each show but
not anymore.

Which is only possible if either a) one is located between the source and destination systems, or b) one has control or can take control of a system located between the source and destination. That also assumes that the route between source and destination doesn't change in such a way that you're no longer located along the route.

>Perhaps someone could illuminate me here. Wouldn't it be possible to
>use this ability to have a cheap way to broadcast sound or video over

>would be unidirectional, but so is radio and television broadcasting.
>Have one machine do streaming audio and video in an unsecure VPN and
>have other people "tune into" this network and pull the stream packets
>off the network.

What you're proposing is really no different than one source system supporting a large number of streams. The only difference is that it starts as one stream, but ultimately splits off into a large number of streams (to support your "large number of people") at one or more points somewhere downstream of the source. Doesn't really make much difference as far as overall bandwidth is concerned; the stream still has to be split to reach everyone. The old net.acronym TANSTAAFL ("there ain't no such thing as a free lunch") definitely applies here.

IP multicast has some of the properties of your scheme, and is structured in such a way as to keep bandwidth usage as small as possible. A stream subscription service that used IP multicast is conceivable technologically, but the logistics required to scale it up for true mass consumption while maintaining full efficiency would be difficult to pull off without support from the major ISPs and backbone carriers, and there's just no financial incentive for them to do so, at least not as things are structured now.

Just curious if there were any radio stations that simulcast the tv
local news in NYC?

Thanks.

Publication of affiliate lists only gives the competition a target
list to work. I'm sure it's not KFI or KABC. That leaves the third
tier KRLA (brokered) and KLAC.

>The WOR Radio Net. used to have lists of affils by state for each show but
>not anymore.

That's when I was Webmaster. We decided to drop it because maintenance
was too time consuming. It was more important for me to run the
network rather than the web site.

The closest you'll get is WCBS simulcasting 60 Minutes.

Of course, you could always tune waaaaay down to the bottom of the FM dial and try to pick up WABC-TV directly...

Hello all,

This is a long shot - but can anyone do a reasonable impersonation of Dick Ervasti - the voice over for many movie trailers, etc.

http://dickervasti.com/

My project is a very short parody animation that requires only about 6-8 sentences of voice over.  Later in the year there's a chance for something much bigger, but it's still in development.

Please contact me for details and be aware that this will be a mutual "scratching of backs" project. So if you can do a good imitation, it might be well worth your while to send me a note to see what I have in mind. :)

Thanks in advance,

-Steve

You're joking! Every word? That would mean the lyricist would actually have to write something meaningful. This is too hard to comprehend.

It would be more accurate to say that younger listeners don't know AM exists -- especially teens. I have a young lady working in my newsroom who claims never to have listened to AM radio, even up to this day, and being aware of its existence only in the vaguest sense before starting to work in radio. (She had also never seen a 45 RPM record, and didn't know what they are until I showed her one that happened to be lying around in one of the studios). She turns 19 in a couple of months. I think she's probably typical of her age group, judging from conversations I've had over the past few years.

My issue isn't with the traffic. My issue is the hazmat debris all over the place. <grin>

My answer was a generic answer.

I listen to NYC stations for NYC or National topics.

I expect local issues and concerns to be aired on local stations, not national satellite fed pabulum.

Might that be market-dependant?

NYC has no shortage of AM stations with adequate technical facilities to provide good signals throughout the market. That can be very different in other markets. For example, here in Nashville there are only two AMs (WSM & WLAC) that have reliable coverage throughout the market at night - and even WLAC can be flaky in places.

(it may not be a coincidence WLAC's news-talk and all-sports competitors

are both 100kw FM stations)

For sale:

Partial interest in class "A" FM station in Arkansas.

The "Radio Crazy" !! Well its back!!!!!!!!

$195,000 including studio and transmitter buildings,
land, tower, etc. A steal.

Beautiful small town in NE Arkansas about 16 miles S.
of Missouri border.

Group deal (Joint venture....if you venture, you go to
the joint! Hi!)

Active or inactive investors with at least $10,000
each are welcome. All investors would be on the board
with full voting rights if desired.

You ignored the "Radio Crazy" cuz he offered AM
stations. NOW he is offering an FM station for Pete's
sake. So move on this one. It won't be around long. It
is an FM and at AM price!

Tel: (478)741-1710 in Macon, GA or email.

73,

Meyer Gottesman, W6GIV
aka Moron Gottesman
aka "The Radio Crazy"

Won't work, you're talking about 87.75MHz and that's channel 6 (WPVI
Philadelphia if he's south of NYC)

Um... The sound from Ch. 6 is available that way, not 7.

That would be a pretty neat trick, seeing as how the bottom of the FM dial is
88 MHz, and WABC-TV's audio carrier is at 185.75 MHz.

Take 2.

The bottom of the FM dial is at 88 MHz.  WABC-TV audio is at 179.75 MHz.

You're too young to remember when skilled people wrote lyrics - Ira
Gershwin, Cole Porter. Irving Berlin and the whole lot.  For your musical
education of that period I'd suggesting listening to XM-4 ;-))

On rethought - maybe the slogan was "hear" ever word.  The idea being that
you could listen to the program and then start singing the songs yourself -
no need to buy records or sheet music.  Remember that 78 records were VERY
expensive.  Two songs for 50 cents or more,  Bluebird was RCA's cheapo label
at 35 cents.  Multiply by about 14 to get the equivalent in today's
dollars - very roughly the equivalent of $5 for a Bluebird 78 with two
songs..

I must be getting subharmonics or something;  one of my car radios picks up
channel 7 down on the bottom of the FM dial.

That's about how much a modern-day 45rpm 7" single costs.....

A 12" club single (they call them extended mixes) now goes for
anywhere from U$7.00 to $20.00 depending on the artist.....

I've seen full-length LPs -- nowadays a lot of them are two-record
sets go for $30 if they're "imported" *eyeroll*

It also gives people who know their salt about radio the chance to laugh
when a big nationally syndicated show plugs covering Chicago, when the
station airing the show is actually a 250 watt daytimer west of Rockford
:-)

(this is an example; it never happened to the best of my knowledge)

'Tunes' I think is what you are talking about there brother R J and I would agree with you largely even though I was brought up on 60/70's AM and the good old CBC..

What - you're - talking about the increasing roll over of western culture into the dark rule of the synthetic, data modelled, vertically integrated 'popular' corporate artist.. All part of the fall of Rome brother..

Not that both Berlin and Porter didn't cough up some pretty ugly stuff to pay the bills too - but it has gotten pretty bad lately on the racks I will agree.. And I think the kids are on to it - see what happened to Justin Timberlake at that Toronto shindig?.

Run the search term - 30's - or - 40's - on my hobby bitcaster below..

When I put the search engine together for the site, I built it so you could search by lyric fragment because that is about the only way I remember a 'tune' and it really puts a load on the server model for testing purposes.. Consequently - most of the playlist is populated by lyrically memorable tunes from several eras right up to now.. Stuff I can croak and waddle (privately) along with - which in turn attracts a very interesting group of fans who, like us, like 'tunes'.

I have a number of big band covers in there from the Setzer Orchestra (which were interesting enough to push the originals off my play bank) - but - you'll probably get a bigger kick out of the some of the OEM Andrew sisters stuff - particularly with Danny Kaye..

Now I would put it squarely at the doors of the Video media, except that some of the very best 'tunes' came out of vegas/movie/stage song writing of any given time.. Well except for my main man Bill Monroe - his stuff came out of back or a 32 ford with a 'spare' tank as near as I can figure..

Anyway - it isn't being forced to dance as well as sing that is making it all run wrong..

My take is the published financial 'decline' of the music business is more the result of bad reactive A&R calls regarding taking risks that don't match up with the sample generated demographic models that big station advertisers will support (with all due respect to brother Eduardo) - rather than - outright downloading itself.. Although I bet it's easier to get an industry fight together against it as opposed to a campaign around 'we suck - we have mostly crappy tunes right now - sorry that's what everyone's numbers tell us you want'..

Every so often however - someone sneaks a darned good 'tune' out the back door and I quickly hand over my $20 for the CD.. Check out:

En Vogue - Giving Him Everything He Can Feel
http://www.dexterdyne.org/888/118.RAM

What do you do about it? I don't know.. I'm just a propeller head..

Nobody seems to reward being a talent much anymore - well except to point out what a talent someone is between the softcore pepsi porn.. The system isn't broken at all according to most of the professionals here - it's the thieving public out downloading and sharing out their old collections that's to blame apparently..

Now I don't support downloading myself - don't use cacheable audio dataforms specifically to not support it - but I can sure see how folks are unwilling to fork over the money for most of the popular albums out there right now.. With the interesting proviso that while it's still a crummy way to make a living - most of the small Jazz and Traditional labels are doing as well as ever - better than ever actually..

Amateur Radio Newsline(tm) Report 1358  - August 22 2003

>From the 2003 Huntsville Hamfest and from our studios in New Orleans, this is Amateur Radio Newsline report number 1358 with a release date of Friday, August 22 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.  I'm Don Wilbanks, AE5DW, reporting.

We begin this weeks newscast with the sad news that one of the voices so well known to ham radio will be heard no more.  This, with word that Amateur Radio Newsline's Vice President and senior anchor Roy Neal, K6DUE, has passed away.

Roy was 82 when he died on Friday, August 15th at a hospital in High Point North Carolina.  He had undergone heart valve replacement surgery three days earlier.  According to his family, Roy was at peace at the end and did not suffer.

In both the worlds of broadcasting and of Amateur Radio, Roy Neal was a legend. He began his career at WIBG radio in Philadelphia.  After military service in World War Two, he returned and helped  pioneer the emerging medium called television at station WPTZ.  He then joined the National Broadcasting Company where he spent most of his career producing and reporting for Network News.  His specialty was science and aerospace.

But to hams, Roy will always be remembered as the person who brought manned Amateur Radio into space through the SAREX and ARISS programs. His close friend and NBC colleague Alan Kaul, W6RCL, joins us later in the newscast with more on Roy's many contributions. (ARNewsline, Philadelphia Broadcast Pioneers)

**

IN THE NEWS: JIM HAYNIE ON BPL

Roys Death came just as the Huntsville Alabama Hamfest was getting underway. One of the major topics hams were talking about is he growing debate over B-P-L or Broadband Over Powerlines. One of the people most concerned is ARRL President Jim Haynie, W5JBP:

--

Jim Haynie, W5JBP: "Broadband Over Powerlines is important, and just as I said on our website - this is bad. This is not good for Amateur Radio and I don't know how we are going to lick it. Quite frankly, and I want to tell you that right now."

--

Haynie made his comments to a packed audience at the hamfest's ARRL Forum. He says the League is doing everything possible to try to convince the FCC to not proceed with rule making B-P-L a reality. (ARNewsline)

**

RESTRUCTURING: HAM RADIO AFTER MORSE CODE

Jim Haynie also shares his thoughts on a subject dear to many hams: Whether Amateur Radio should or should not keep Morse code. Stressing that he speaks for himself and not the League, Haynie says code should be a requirement for the Extra Class license:

--

Jim Haynie, W5JBP: "What if we were to have three classes of licenses? Entry, General and Extra and Entry got phone privileges on he current Novice bands? And that's all.

So we ask questions on the exam about just that. They could only use 100 watts store bought radio equipment. Possibly even a two-year expiration date.

Generals - same thing except no new expiration date. The same privileges they have today. But for Extra we retain the 5 words per minute code requirement."

--

Not everyone agrees with Haynie.  Scotty Neustadter, W4WW, is Chairman of the Question Pool Committee for the National Conference of Volunteer Examiners and this is his personal view:

--

Scott Neustadter, W4WW:  " This is not your fathers or your grandfathers ham radio.  Things have changed.  Technology has changed, and I think that - to an extent - that we have to change with them.  We have to recognize our history and in no way am I - nor do I know of anyone else ho is advocating any abolition of the right to operate CW on any Amateur band where you can operate it today.

What I do know is that there is a whole lot of people saying that it does not make allot of sense anymore that I require that you be able to do that.  I think that's the distinction that we have to keep in mind.

--

While the debate over Morse Code in amateur radio's future goes on _ Jim Haynie points out that what will be decided remains a long way off_perhaps years.  (ARNewsline)

**

HAM RADIO HONORS: W6JAY RECEIVES 2003 YHOTY AWARD

As enthusiastic hams began pouring into Huntsville's Von Braun Civic Center Saturday morning _ one of the Hamfest's biggest moments was taking shape.  The Huntsville Hamfest is the setting for an exciting yearly event_and that's the presentation of the annual Amateur Radio Newsline Young Ham Of The Year Award.   This year's winner is 17-year-old Jay Thompson, W6JAY, of Santa Ana, California:

--

Jay Thompson, W6JAY:  "When I first started I did not think that thre was allot to do in Amateur Radio, but the longer I am a part of it , I realized that there is much more that I could do.  And I know that as much as I have done so far, I know that there is still kore out there for me.  So I'll keep trying to acomplish more and maybe Ill become even better at Amateur Radio in the future."

--

CQ Magazine is one of the award's principal underwriters.  Editor Rich Moseson, W2VU, says that_while Jay stood above fellow nominees_many other young hams are big achievers, as well:

--

Rich Moseson, W2VU: "Every year we review applications and nominations from a variety of people. The person you see standing here on the stage is not the only really good kid who has done allot.  He's just risen the crop a little bit.  There are a whole lot of other young people out there in ham radio doing great things, and we congratulate all of them."

--

The Amateur Radio Newsline Young Ham Of The Year Award is in its 17th year.  Vertex Standard and CQ Magazine are the Award's principal corporate underwriters.

That's it from the 23003 Huntsville Hamfest.  The rest of the newscast will come from our New Orleans studio, but first this.  (ARNewsline)

**

Break 1

>From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the 145.600 MHz repeater of the Hiway Amateur Radio Club serving Durban South Africa.

RESCUE RADIO:  THE BLACKOUT

Ham radio came to the rescue as cellphone systems totaly failed during the recent North-East blackout.  Bill Pasternak, WA6ITF, has more:

--

A New York Times article said it this way:  When technology failed on a massive scale, some old-fashioned broadcasting stepped into the breach. This, as ham radio operators took to the airwaves to reach emergency workers.

The technology that failed was the North-East power grid that provides electricity to cities like Cleveland, Detroit and New York.  This in turn lead to communications failures as numerous cellular telephone sites without generators or battery back-up - went away -- the afternoon of August 14th .

According to an ARRL Bulletin, with cellular systems overloaded or out altogether, the incident turned into a test of Amateur Radio's capabilities to operate without commercial power.  The New York City-Long Island Section Emergency Coordinator is Tom Carrubba, KA2D.  He estimates  that ham radio operators handled 800 to 1,000 messages from Thursday afternoon until early Friday.

Diane Ortiz, K2DO, is the ARRL Public Information Coordinator for the area. She took to the air when power went down in her Suffolk County community. Ortiz called up an informal VHF net. Over the next 20 hours hams passed about 500 pieces of traffic. In addition to handling messages for people stranded in the city, amateurs also relayed other useful information. This included such items as which stores or gas stations were open.

In the Big Apple itself, ARES teams provided communication support for Red Cross Emergency Response Vehicles set up at transportation centers in Manhattan. ARES members also accompanied Emergency Response Vehicles to fire calls. RACES was activated in the greater New York City area after a state of emergency was declared.

Across the Hudson River in New Jersey, a net linked the Red Cross lead chapter N2ARC in Princeton with other chapters. Further to the West, Michigan ARES teams assisted emergency operations centers and the Red Cross.

In Ohio, Section Emergency Coordinator Larry Rain, WD8IHP, reports that all ARES organizations in the Northern tier of the stated were activated.

For millions of people in the Northeast and Midwest, the August 14th power outage took away access to wireless voice, e-mail and the Internet. The failure of the cellular system was especially evident. Nextel Communications spokesman Chris Grandis said that the company needs electricity to power its cell sites, but when you don't have that, it's out of his company's control.

The same held true for virtually every other wireless provider, few of which bother to have emergency power at cellular and wireless Internet sites.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.

--

The bottom line: The traditional forms of communications failed, but hams were there to lend a hand. (ARRL, NY Times, others)

**

RADIO LAW: FCC DECLINES TO RECONSIDER ITS HUMAN EXPOSURE TO RF RULES

The FCC has declined to open an Inquiry into updating its human exposure to RF signals rules. In particular, the petitioner in this case wanted the Commission to consider possible health hazards not covered by the current rules, including non-thermal effects and the effects of long-term low-level RF exposure.

According to the CGC Communicator the FCC dismissed the petition,

arguing that any such evidence should be presented to other, more appropriate expert agencies. The Commission also noted that its current human exposure rules have recently been upheld by the Second Circuit Court of Appeals. This, in the face of similar arguments by other petitioners. The complete story is in cybrspace at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-191A1.doc
(CGC)

**

WRC'03 FALLOUT: GERMANY GOES CODE FREE

It's another week and another country has joined the no-code revolution. Following Switzerland, the U-K, and Belgium, Germany is the latest country to announce that it is abandoning the Morse code test as a requirement for HF band operation.

According to the website of the German national amateur radio society, the DARC, from the 15th of August radio amateurs in Germany with a CEPT Class 2 license are allowed to use the High Frequency bands using their existing callsigns. Further details were to follow, the website said.
(GB2RS)

**

RESCUE RADIO: OREGON HAM RECEIVES HONOR FOR GOING THE EXTRA MILE

Back on this side of the Atlantic, an Oregon ambulance dispatch coordinator, EMT and amateur radio operator has been named a recipient of a "Star of Life" award. This, from the American Ambulance Association.

Scott Waggoner, KC7DHJ, of Clackamas County was nominated for the honor by his co-workers in recognition of the many extra tasks he has undertaken at AMR's headquarters in Portland. Among other things, KC7DHJ was cited for his help in setting up portable repeaters during search and rescue operations, his treatment of minor injuries suffered by firefighters and his overtime work on an American Medical Response ambulance. (CGC from OregonLive.com)

**

ENFORCEMENT: UNCOORDINATED REPEATERS TAKEN OFF THE AIR

It took three letters and allot of patience on the part of the FCC but a repeater interference problem in Stockton California has been solved. This, as Thomas G. De Lasaux, WA6SEK, removes his repeater from the air.

The matter goes back to September 9, 2002, when the FCC notified De Lasaux that his operation of uncoordinated repeaters on 224.660 and 441.275 MHz was causing interference to coordinated repeaters on the same frequencies in his are. By letter dated May 5, 2003, the FCC informed De Lasaux that the information he submitted in regard to the initial inquirey did not demonstrate coordination for either of the repeaters. Also, that until he was able to demonstrate current coordination, the primary responsibility to prevent interference.

At that time the FCC requested De Lasaux inform the agency within 20 days what steps you were taking to resolve the interference issues. On July 1, 2003, the FCC notified WA6SEK that we had not received a response to the May 5th letter, and enclosed an additional complaint. The July 1 letter afforded De Lasaux an additional 20 days to respond, and stated that if the matter were not resolved by July 25, we would initiate enforcement action against his license.

On July 22nd, De Lasaux notified the Commission that your repeaters operating on 224.660 MHz and 441.275 MHz had been shut down and would remain so. The FCC has now terminated all further action in this matter. (FCC)

**

## ENFORCEMENT: FCC AFFIRMS $10,000 FINE AGAINST NY PIRATE

The FCC has affirmed a $10,000 fine issued on July 23rd of 2002. This, against the Reverand Yvon Louis in a case the case involves an aleged series of unauthorized FM broadcasts made from Louis' Calvary Tabernacle in Brooklyn, New York.

The FCC says that over the course of several months in 2001, Reverend Louis reportedly transmitted on 93.7 MHz, then switched to 88.1 MHz after getting caught. But it was not over yet. He then used 90.1 MHz after getting caught again, then reverted to 88.1 MHz in open defiance of the FCC order to stay off the air. (FCC, CGC)

**

## RADIO HAPPENINGS PAROCHIAL SCHOOLS TO REMOVE CELLULAR ANTENNAS

Bowing to health concerns from parents, sixteen schools operated by the Catholic Diocese of Brooklyn will eliminate cellular antennas mounted atop buildings and church facilities. The on-line edition of the New York Post reports that one parish stands to lose $18,000 a year in rent money used to offset the school's operating costs as a result of the change. (CGC)

**

## COMMUNICATIONS FOR THE HANDICAPPED: BLIND STUDENTS LEARN TO NAVIGATE USING NEW GPS TOOL

A group of blind high school students visiting Catholic University in Washington D.C. recently shouldered specially equipped laptop computers. This, as they navigated about the campus and visited a pizza restaurant led by voice commands and the Global Positioning System.

A $1,000 Global Positioning System add-on to the BrailleNote keypad showed the students that getting around a college campus is suddenly much easier than it used to be. The complete story is on line at www.washtimes.com/business/20030729-093916-2006r.htm (CGC)

**

## WITH THE HANDI HAMS: SUMMER CAMP ON THE AIR

Handi Ham station W0EQO, will be on the air during the summer Minnesota Radio Camp from August 23rd through August 30th. You can look for W0EQO on several different bands using CW, single sideband, FM, and digital modes. Also listen in cyberspace for an EchoLink net on Monday evening at 2400 hours GMT. The HandiHams will respond to all QSL requests for all contacts, including EchoLink contacts. (HandiHams)

**

## BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

## INTERNATIONAL - HOLLAND: NEW PREFIXES FOR THE NETHERLANDS

A New call sign prefix went into effect in the Netherlands on August 7th. On the High Frequency bands, the PA, PB, PC, PF, PG and PI prefix callsigns will now be be heard with one, two or three letter suffixes. On VHF and above, the PD, PE and PH are the prefixes, again with one, two or three letter suffixes. For example, the former PBZ0AIU, who sent in this news story, is now PC2A. (PC2A via GB2RS)

**

## DX

In D-X, word that GM0GNY, is active as 4K0GNY from an oil drilling and production platform in Azerbaijan. He will be there starting the 20th of August for around a month. Look for him on daily on 40, 20, and 17 meters and QSL as directed on the air. (OPDX)

**

## THAT FINAL ITEM: A FINAL 73 TO K6DUE

At the beginning of our newscast, we told you about the passing of a member of the Amateur Radio Newsline family. Roy Neal, K6DUE, died August 15th following heart surgery. One of the people who knew Roy best is Alan Kaul, W6RCL. Roy and Alan worked together at NBC News, and on projects benefitting amateur radio. Alan looks at the life of a man who was an institution in American broadcast journalis, as well as a driving force in amateur radio's conquest of space:

--

When Roy Neal, K6DUE, died last week, he was possibly the best-known ham in America. He left an indelible imprint on Amateur Radio.

Roy, more than anyone else, was responsible for getting ham radio aboard manned space craft and each new mission is testament to his legacy. His efforts earned Roy awards from the Dayton Hamvention, they designated him Ham of the Year and from CQ-Magazine, which this year named Roy to the Amateur Radio Hall of Fame. He also received honors from The American Radio Relay League, and other groups and served as chairman of two key AMSAT committees.

Roy was a good guy. He was my friend and colleague at NBC News.

I met Roy in the 1960's when I was working in Seattle and he came to town to report on aerospace giant Boeing. After I moved to Los Angeles and joined NBC News in the 70's, Roy and I collaborated on a lot of news reports.

As a correspondent Roy was best known for his coverage of the U-S Space program _ he was a friend of the original astronauts _ and often reported from both the launch site at Cape Canaverral and NASA Mission Control in Houston.

Not many people know this but Roy was also the author of a book about America's missile system_. called The Ace In The Hole. It was written at the height of the Cold War.

In the 1970's, Roy teamed with television producer Dave Bell, W6AQ, to launch the first of several documentaries about amateur radio. Number One was a 16-minute film, Moving Up to Amateur Radio. Followed a few years later by The World of Amateur Radio. Dave Bell remembers Roy as the ultimate professional:

--

Dave Bell W6AQ: "Of all the on-camera talent that I have known, Roy was the most assured and had the smallest ego of all of them.

He was a true professional when it came to the news. Everything was always true. Everything was straight from the shoulder and there was no compromise.

Roy was one of the old-school news guy. He grew up in the television business and he understood it better than anybody who is working in it today."

--

In the 1980's Roy helped convince NASA to put ham radio in Space aboard a manned flight of the Shuttle. That first ham-astronaut was Owen Garriott, W5LFL, on board STS-9. Garriott's story of the 1st DX-pedition in Orbit was told by Roy in the television documentary Amateur Radio's Newest Frontier.

--

Audio from ARNF: "This is the story of an expedition. The story of STS-9. The Columbia. And these are the explorers: John Young - the commander. Brewster Shaw the shuttle pilot. And the scientists Dr. Ulf Merbold, Byron Lichtenberg, Robert Parker and Dr. Owen Garriott -- an Astronaut who is also Amateur Radio operator W5LFL. This is an expedition to probe the outer limits of science and Amateur Radio's newest frontier.

--

Roy's next project was called SAREX - Shuttle Amateur Radio EX-periment, followed by the New World of Amateur Radio which profiled a new ham, teen-ager Kelly Howard, N6PNY. She's now all grown up, married and has kids of her own. She fondly remembers working with Roy Neal.

--

Kelly Lenhert (ne Howard) N6PNY: It was all so exciting, but it was also overwhelming. But working with Roy made me feel so comfortable. He made me feel competent in what I could do. He took me under his wing and he was really supportive and he got me to do what I needed to do to make the film and bring out the best in me."

--

Roy's last documentary was called Ham Radio in Space. Roy's interest was a natural fit with AMSAT. Roy's close friend AMSAT Vice President Frank Bauer, KA3HDO, thinks of K6DUE as his mentor.

--

Frank Bauer KA3HDO: "One of the things that Roy taught me was how to distill information into basically sound bites, if you will. I remember one time where we had to give a presentation - at Dayton - and we had 20 minutes. I told him that I did no know how he could so that, and he said: `Frank, if I can do the whole world on the news in 30 seconds, you can do this in 20 minutes.' So Roy taught me a whole lot from an executive perspective because he was a true executive."

--

Another AMSAT officer who worked closely with Roy is Robin Haighton, VE3FRH, the President of AMSAT North America.

--

Robin Haighton VE3FRH: "The space program itself is in good hands, but there is no doubt about it that we will miss that leveling confidence that Roy always brought to the meetings and the discussions. He made friends with everybody. The moment you met him you felt that here was a man you could trust."

--

Other comments have come in from all over the world From New Zealand, the past president of NZART, Jim Meechen ZL2BHF sent his condolences. As have numerous other Newsline listeners. Another of Roy's friends, Bob Heil, K9EID, had this to say.

--

Bob Heil K9EID: "I'm going to miss his spirit. He had a spirit about him that when you heard him on the air, you stopped tuning. This was something special you were listening to. And it wasn't always the tone of his great broadcast voice. It was his spirit. He was always in an up-mode about this hobby."

--

Roy was in the first generation of television newsmen who began their craft after World War Two. He started in Philadelphia and then moved to the West Coast where he helped found the NBC News bureau in Los Angeles. That was during the days of the old John Cameron Swayzee Camel News Caravan.

Roy was at ease in front of a microphone _ and could talk to millions of television viewers as easily as he could talk to the ham across town. On camera, he had the uncanny ability to read to time, precisely to time. When I produced updates for NBC Nightly News and Roy was the on-camera talent, I would time the newscast and tell Roy how long he would have to report the story.

I'd say something like this: "Roy, can you do it in 19 seconds?"

And Roy would always reply, "You know I can old buddy."

Roy liked that phrase "old buddy." He used the phrase to address friends and co-workers for some time. As for the updates - Roy always got them right. He would stop talking just an instant before we'd have to switch back to the network.

By the time he retired in 1986, Roy had worked out of the Los Angeles news bureau for almost 35-years. He'd probably written millions of words, and brought his audience uncountable hours of news and information.

But even in retirement, Roy Neal didn't stop doing what he did best. He was no stranger to listeners of Amateur Radio Newsline who knew him as a tireless volunteer giving freely of his own time to report the latest information -- always signing off in his own stylized way.

--

"This is Roy Neal, K6DUE. Thanks for listening and 73."

--

73, Old Buddy _ I really hate to see you go.

I'm Alan Kaul, W6RCL, reporting for Amateur Radio Newsline.

--

Roy leaves his wife Pat, and sons Mark and David. Services were held August 19th at the Wesley Memorial United Methodist Church in High Point, North Carolina.

In lieu of flowers the family requests that donations in Roy's mame be made to the Astronaut Scholarship Foundation at the Astronaut Hall of Fame. The mailing address is 6225 Vectorspace Blvd, Titusville, Florida, 32780. Please mark your envelope to the attention of Linn Le Blanc.

And this final thought. Yes, we at Newsline have lost a very dear friend. More important -- so has all of Amateur Radio.

73, Roy. None of us will ever forget you. (ARNewsline, W6RCL)

> The bottom of the FM dial is at 88 MHz.  WABC-TV audio is at 179.75 MHz.

You can  get Channel 5 audio if your FM radio's dial extends down into the 70s.

Japanese FM is 75 or 76 to 90 megacycles (or so).  VHF TV channels 1, 2 and 3 have their audio between 90 and 108.  Japan uses the NTSC system.

If you get one of those radios, you're in business.  I used to have one.  It got stolen. :-(

I wasn't around back then, but in all my readings of OTR and listening
```

to Chuck Schaden in Chicago, I would've sworn that it was "Manhattan Merry-Go-Round" where the announcer said that the songs were sung so clearly that you could understand every word.  And people complained about rock music fifteen years later...

Along those same lines, I have to chortle when I see someone giving a tribute to Bob Hope saying how clean his comedy was instead of today's "depravity."  According to the Library of Congress' extremely impressive web site on Hope's career, more than once at the height of his radio popularity in the 40s NBC execs wanted to drop him because they felt his show was too *off-color* (but obviously didn't).  Plus ca change...

Are people sixty years from now going to be reminiscing about how family-friendly Howard Stern was?

If this is the wrong n/group for this query, then sorry!  and point me off to the right one, if you will.

Thing is, I'm thinking seriously about going in for a digital radio, since hearing a Business World programme about it on the BBC World Service recently. (This would be used in the home, not as a car  radio.)

Now, is there a Best Buy?
As I'm no longer able to see a damn thing, I'd ideally be looking
for a receiver that doesn't require you to look at a display panel
to get information on what mode or channel or whatever you're
currently in or on, as most good radios now seem to.

2.  Are the channels offered really as great as  the speakers on the
BBC WS program claimed?  They were, after all, working for digital
broadcasters, and perhaps less than objective!

3.  In your opinion, will the promised advertisements-free policy
last only until a large enough audience has been built up?

And finally, any other tips you can come up with.

BTW price is not a big problem, only I want to get the right radio
for the job first time, and not have to find I've bought something that's cheap
and cheerful but almost useless.

I'm sorry, but after being in the States nearly five years, I have
to say the radio   here is really pretty awful, and I've almost
given up listening.
Maybe I was spoiled by having had BBC domestic radio up to then, of
course....

Thanks in advance for any guidance in this field.

The Big Blackout of 2003 led DJs on stations which kept broadcasting on backup generators, to actually pick their own music! "It was like free-form radio from the 1970s," says Mike McIntyre, assistant program director for NYC's WXKR-FM interviewed for Blade magazine. "We played Humble Pie, the J. Geuls Band, Deep Purple - stuff we're never allowed to play." (What? No Firesign Theatre???)

Almost all the XM and SIrius tuners are not well suited to the vision-impaired.

There is an exception.  For just $70 including antenna, you can get an XM tuner - complete - that plugs intio the serial port on your PC.  The audio comes out a 1/8-th inch stereo jack as on most XM / Serius tuners.  I don't know if anyone has written the PC side for the vision-impaired.  Send an e-mail to XM and see what they say.

I call them tuners since no XM or Sirius box includes audio amplifier and speakers.  There is a docking station with amplifier and speakers for the Delphi XM tuner, but that tuner isn't well suited to the visually impaired IMO.

> 2.  Are the channels offered really as great as  the speakers on the
> BBC WS program claimed?  They were, after all, working for digital
> broadcasters, and perhaps less than objective!

I have stopped listening to AM/FM radio since I got XM about 18 months ago. The exception is the local news and weather station.

> 3.  In your opinion, will the promised advertisements-free policy
> last only until a large enough audience has been built up?

No one can predict.

While XM has ads on some channels, they limit the number.  There are no ads on the niche musical channels I like.  That includes the older "decades" channels, the classical channels, and some country channels and many others. Of course the BBC World Service channel has no ads.  Most of the rest of the talk channels have ads on both XM and Sirius.

At the present time, I don't consider the ads vs no-ads to be a significant difference between Sirius and XM.  There aren't many ads on XM and they are only on the channels that might attract advertisers - not the niche channels that are the real strength of sat radio.

You can listen to 3-hour loops of most of the musical channels on XM from their site www.xmradio.com.  Recognize that you are listening to Internet streaming audio, not the same quality they give off-the-air.  You can listen to Sirius (1) if you have a highspeed internet connection and (2) if you fill out an info form and register.

Any other questions?

Bob C.

Then again, Radio Shack and other stores that sell radios have a
number of "TV Audio" models, both analog and digital, that cover the
VHF band quite well.  I don't know if you can get TV audio in a car,
tho...and it's been a long time since I saw a "TV audio" receiver that
would pick up the UHF band.

IMO, only one of the currently-available XM or Sirius radios is likely to be
suitable for the vision-impaired.  That is the XM tuner the plugs into the
serial port on your PC. It is controlled  by the PC.  It would seem that a
PC control program suitable for your use could exist.  I have never seen
this unit, which costs $70, complete with antenna.  You might surf XM for
info   www.xmradio.com    Also you could write the president of XM
hugh.panero@xmradio.com - you will get a reply.

Which brings up a point about indoor reception.

XM's satellites are stationary over the equator roughly south of Florida and
Arizona.  They have many hundreds of ground-based repeaters.  Unless you
have a view to the southeast or southwest from your location in Fort Worth,
you would have to hope for coverage from a repeater.

Sirius's satellites are not stationary.  There will always be one somehwere
north of North Dakota up as far north at Hudson's Bay.  The other active
satellite cross the equator well east of the US or west of the US, heading
to North Dakota. Sirius has relatively few repeaters.  This means that an
indoor antenna that may work one hour may not the next since the satellites
are moving.

My conclusion is that Sirius may have better coverage to cars, but XM is more likely to be satisfactory indoors.

> 2. Are the channels offered really as great as the speakers on the
> BBC WS program claimed? They were, after all, working for digital
> broadcasters, and perhaps less than objective!

I have had XM for 18 months and only listen to AM or FM only for our local news and traffic station. With my niche musical tastes, there is nothing on ordinary radio, but a number of XM channels. I would feel lost without satellite radio.

> 3. In your opinion, will the promised advertisements-free policy
> last only until a large enough audience has been built up?

No one can predict.

XM's ads are only on the "hot" demographic channels, and are limited to about 1/3 as many per hour as your local FM station. None of the XM channels I use carry ads. The talk channels on Sirius and XM are mostly commercial, except for XM's BBC World Service, of course.

I don't consider ads vs no-ads to be a major consideration at this point - at least for me.

The XM and Sirius units are tuners, not radios - they generally put out audio through a 1/8-th inch stereo jack. The exception is that there is a home ac-powered docking station for the Delphi XM Skyfi unit which contains an amplifier and speakers. I don't think this is likely to suit a vision-impaired person, but is certainly worth your consideration.

Any questions?

>(this is an example; it never happened to the best of my knowledge)

Oh, it's happened, alright!  Even among the biggies.  A high-profile
certain recently launched nationally syndicated program...put out by
one of the major radio networks....has a few of these on its list.

For one, it lists Conneaut, OH's WWOW-AM 1360 as "Cleveland/Conneaut"
(until WERE/1300 Cleveland picked up this program, it was the only
"Cleveland" affiliate listed).  WWOW is a 500 watt station that has
trouble reaching nearby Ashtabula, OH, let alone most of Cleveland.
;)

At least they didn't try to hide it and just call WWOW a "Cleveland"
(without mention of its city of license) affiliate!

Mike

While DXing this morning, I heard an ad that, well, let's say it shouldn't have been on radio.  Unfortunately the station was distant and fading, so I don't know who the culprit was - in any case I'm pretty sure it was part of a syndicated program.  (and thus may well air on *your* station.  I've heard similar ads on other stations (WFAW-940, for one) during syndicated programs.)

They were advertising a radar detector that "makes your car invisible to police radar".  It is my understanding that these devices work by heterodyning a local oscillator against the incoming radar signal.  This allows the speeder to cause the officer's radar to display whatever speed the lawbreaker wants - or at least causes it to believe it's receiving an invalid signal, and display nothing at all.

The FCC has ruled these devices to be ILLEGAL, and on appeal a federal court upheld the Commission:
http://www.fcc.gov/ogc/documents/opinions/1998/rockymtn.html .

It seems to me to be dangerous territory for a Commission licensee to be accepting ads for devices that:

- Assist people in avoiding prosecution for intentionally breaking the law and putting others' safety at risk.
- Do so by *intentionally interfering* with licensed services.
- Have already been ruled illegal.

I would hope station owners will think twice before advertising illegal activity.  If I ever hear one of these ads again in a situation where I"m able to collect adequate documentary information, I *will* be filing a formal complaint with the FCC.

Yes, Dr. Lyons it was as sponsor of the "Manhattan Merry-Go-Round" where the "songs were sung so clearly you can understand every word and sing them yourself."  The show ended in 1949.

The "Fitch Bandwagon" show ran for ten years on NBC (ending in 1948) sort of morphing into a situation comedy show by the end.  The theme, however, was always--

Laugh a-while, Let a Song be your style,
Use Fitch Shampoo!
Don't despair, Use your head, save your hair,
Use Fitch Shampoo!

I think your concern for station owners is groundless.

Questionable dietary supplements, useless weight-loss elixers and fake sexual capacity enhancements are now routinely advertised even on the formerly respectable radio networks.

Anything goes during the Baby Powell era.

Please pardon the dual messages.  The first one escaped without a trace and
I thought it was lost.

To make a slight addition.  I find XM coverage in my car to be very
satisfactory.  It has worked in every shopping mall multistory garage I've
tried - and Sirius's limited number of repeaters makes it unlikely that they
would do as well.   OTOH, it is at least theoretically likely that Sirius
would cover better in some rare rural areas shielded from the south by very
steep hills, etc.

>The FCC has ruled these devices to be ILLEGAL, and on appeal a federal court upheld the Commission:
http://www.fcc.gov/ogc/documents/opinions/1998/rockymtn.html<

Er, not quite.  They ruled that ONE specific jammer was illegal...whereupon the manufacturer put the same works in a different case, changed the model number, and began marketing it again.  The device you heard the ad for it NOT illegal, as far as the feds are concerned.  A few states ban their use.

The funniest aspect to the whole thing is that they don't work.  By the time they have sent a jamming signal to the police radar unit, the radar has already displayed the vehicle's speed.  Using the device also assumes that the cop is stupid.  If the cop sees a car traveling considerably faster than the rest of traffic, and that car displays a speed a great deal different from the rest, he or she is going to know that something's not right.

WRXR 105.5 of Chattanooga has been advertising that ad for a few months...
An ad clearly aimed at young people I think.

RJ,

I can second your assessment of the XM coverage. I travel in rural VA quite frequently and have found very few locations where reception was a problem.

My 2001 F150 makes frequent trips to North Carolina, West Virginia and even Kentucky. And, other than a second or two under an overpass, I've had continuous coverage.

Just my two cents,

Jeremy Powell

The follow was also emailed directly to Ian:

Do you have a high speed Internet connection? If so, just listen to the BBC directly over the Internet. The BBC website isn't blind friendly, but I think all of the channels stream. I particularly like BBC 7. You can get transmitters that will broadcast the streaming audio onto FM frequencies so they can be listened to on any radio in the house.

Wow!  Just for fun, I turned on the Visual accesibility and changed the screen to 640x480.  If you can read this, you can read the XMPC guide.

XMPC is $70 plus shipping and tax from PC Connections and the $9.95 per month fee for the first radio.  It is really nice in that you can set your favorite channels and it will monitor what's on.  You can even set it to pop up you favorite shows.

I have mine connected to a set of Logitec external speakers (the kind with the sub-woofer, but I have used the cable to feed my souncard and Total Recorder PE to capture the history of music.

I like to listen to the NASCAR, Decades and Country, Online Tonight, and Old-Time Radio/Sonic Theater channels the most.  Online Tonight has tons of self-promoting commercials and I've never heard it live, so I don't know if the musical breaks fill in for commercials.  Pretty much the rest of the channels have mostly promos in place of commercials.

XM-4 has perhaps one promo per hour and no commercials. XM-73 seems to have
neither promos nor commericals.

So they are accepting money for ads for a product that doesn't work?

When I consider the other trash that gets advertised on the radio now, I
guess that really shouldn't surprise me -- it blends right in with the
scam advertisements for weight loss products and the like.

I can't help but wonder how accepting advertising like this will impact
the long term credibility of radio?

Unless you have some professional broadcasters involved it's like the blind leading the blind. "DJUndahCovah" doesn't sound like you're very proud of what you're doing.

What you're doing is teaching them how to break the law. Beyond the prohibition that the government can't control what you say after you have a license, there is no free speech in broadcasting. Absolutely none. The owner of a station has the right to tell you what you can and can't say.

It's insulting to suggest that a community needs a pirate (lawbreaker) to teach them about free speech. I'm from New England where town meetings are a long tradition. That's free speech and everyone in town knows what it is.

This is wonderful news! Management is no longer responsible for what its employees do. That'll make running stations much easier.

How can management have no responsibility when employees admit they were part of the stunt? Let's see them get that excuse past the FCC with a straight face. If a station producer gave the stuntman a military uniform, that, alone, makes the station an accomplice.

I smell a big fine in the works. Unauthorized access to a miltary base when the President is there. I wonder how nature can possibly make someone that stupid.

Thank you. Thank you. Thank you. I love being called too young. However, I have to confess that I spent many early years of my career programming Easy Listening both on the station level and in syndication. I was creative Chairman of the International Beautiful Music Association. We recorded Easy Listening material when the supply started to dry up.

I wasn't alive when they were writing it, but made a good living spreading it around.

Not illegal, or not enforced?  (the Feds never chased down and
prosecuted the pirate FM that operated in my hometown for many years.
Surely that doesn't mean the operation was legal?)

Good point.  Though to a large degree the damage is done if the user
*believes* he can speed without risk, even if he's wrong.

On 23 Aug 2003 20:08:38 GMT, geezer@radio411.com (Mark Howell) wrote:

> It would be more accurate to say that younger listeners don't know AM exists -- especially teens. I have a young lady working in my newsroom who claims never to have listened to AM radio, even up to this day, and being aware of its existence only in the vaguest sense before starting to work in radio. (She had also never seen a 45 RPM record, and didn't know what they are until I showed her one that happened to be lying around in one of the studios). She turns 19 in a couple of months. I think she's probably typical of her age group, judging from conversations I've had over the past few years.

Not long from now, probably within our lifetimes, the generation after her won't know what FM or Satellite Radio is. When I was her age I had never seen a 78 or an Edison cylinder until my grandfather showed me his collection of them.

That's why the delivery system isn't important. Content is. While delivery systems constantly (slowly) change, the formatting of the content hasn't changed very much. It's a linear playing of a song or two, some announce, commercials or fundraising "promo" more songs, ad nauseam. Talk hasn't changed much, either. The most significant change in talk has been the telephone.

You and I will sit on the porch in 2020 reminiscing with our grandchildren about MP3, CDs, Minidisks and digital audio systems.

We can't forget to complain, even then, about consolidation and cookie cutter radio. The kids will look at us with that "what planet is he from" look. My family has long life genes. Unless we get hit by busses we live into our late 90's, so I'll have plenty of time (I figure

2035) to educate uninterested kids.

Rich

>(it may not be a coincidence WLAC's news-talk and all-sports competitors
>are both 100kw FM stations)

The only talk stations that have reasonable numbers are WWTN-FM (5.1) and WLAC-AM (4.0) What's the other FM talk/sports station? Not Salem's "Christian Talk" with a .8? Both WLAC and WWTN dropped in the Spring book.

In Nashville you might be right. I'm amazed that WWTN has better numbers than WLAC. WWTN's programming is weak (IMHO), compared to WLAC. Looking at the lineups I would assume WLAC has a signal problem.

This was useful: it gives local dealers.  And the selection of
broadcast material  on offer
looks far better than the standard radio output in this country.

> hugh.panero@xmradio.com - you will get a reply.

I thought someone would ask this!
Yes, getting stations like BBC Radio 4 would be a solution ....
only snag is, well, ahem, I am still obstinately using an ancient
486 dX PC and operating on DOS, i.e. no Windoze!
I do also have a perfectly good pentium with a demo screen reader
set up on it, but never did get to like using it.
One day, maybe, one day ..

In a quick band scan today in Boston MA I counted 16 -

WGBH, WPRO (Providence RI), WBOS, WQSX, WTKK, WBMX, WKKB, WKLB, WFNX (101.3),
WFNX (101.7), WODS, WBCN, WROR, WMJX, WAAF (hmm, I missed one).
Many of these went RDS in last year or so. I looks like Infinity really
jumped on the bandwagon (in this market anyway).

It is a pleasant surprise as I've had an RDS Ford radio for a while.

Now if we could only get a few AM stations to re-activate their C-Quam
Stereo (WBZ, WSNR, WCRN - we know you have the equipment). We are down
to three AM Stereo Stations: WILD, WJIB and 1360 (don't know the calls -
this one converted to stereo in the last year). My Ford Radio can do
C-Quam AM Stereo as well (not IBOC though).

> Easy way to find out:  Unplug your cable feed and hook up the TV set to an antenna.

If you do that, remember to switch your television to broadcast TV ("Air") mode.  Cable TV uses different frequencies for the upper channels than UHF broadcast TV, so if you try to receive UHF TV with the television still in cable mode, all you'll see is static.

That being said, VHF channels 4 and 5, or 6 and 7 can be broadcast simultaneously in the same city because their frequency allocations are not right next to each other, like the other channels.  Between channels 4 and 5 there's the 72 MHz radio band, used for things like pagers and wireless microphones.  Channel 6 is at the top of the "VHF-Lo" TV band -- just below the FM radio band, so you can hear Channel 6's TV audio at 87.7 "FM" -- while channel 7 is at the beginning of the "VHF-Hi" band, over a hundred MHz higher, with many other radio services between them, including FM broadcast radio, aircraft communications, ham radio, public safety (police, fire, etc.), and business communications.

In the early years of TV, at least up through the 1950s, it was common to have separate antennas for the VHF-Lo and VHF-Hi bands, with a switch on the back of the TV set to select between them.

My question is: Is he really there in the studio, or are those pre-recorded carts of his voice, inserted between songs and commercials.  It seems like I never hear him announce the time, weather, or talk to a listener live on the phone.

Either way, long live THE voice of FM radio.

The "Radio Crazy"................It's back!! The're HERE!!!! Heh Heh!

Partial ownership in fulltime Ohio AM for sale. Medium size market. City of license over 47,000 people and

county over 225,000 people. Estimate at least 300,000
in daytime coverage area.

Full price only $125,000 and listen up buddy boy! This
includes 12 acres of tower land, two towers and the
transmitter shelter. Studios are leased from the city
at $600/month and I am told they are beautiful.

This is a joint venture. You could lose all or part of
your investment. There is an element of risk. You
could choke on an onion bagel. You could be charged
with pinching babies in a baby carriage! You have a
right to remain silent. Anything you could say could
bore me! HI!

Active or inactive investors with at least $10,000
each are welcome. All investors would be on the board
with full voting rights if desired.

(Recording)....beep, bap, boop!!!! The person you have
reached is NOT a working person!! Beep, bap,
boop....The person you have reached is NOT a working
person! CLICK!!! (grin!)

The "Radio Crazy" ain't THAT crazy. His last job was
Chief Engineer for a NYC 5 KW fulltime AM. (2001).

Tel: (478)741-1710 in Macon, GA>

73,

Meyer Gottesman, W6GIV
aka Moronic Gottesman
aka "The Radio Crazy"

I heard he's doing ISDN voice tracks out of his home.  No way he's in the studio.

This one will no doubt be making the rounds (you may even spread it yourself) so let me be the first -- or second -- to share it with you:

Three guys are waiting to get into heaven.
Peter asks the first man, "How much money did you make?"
The man responds, "$250,000."
"Really, what did you do to make that kind of money?"
"I was a lawyer" the man answers.
"Very well, you can come in..."
Peter asks the second man the same question.
"I made $279,000 last year," he says.
"And what did you do to make that money?" asks Peter.
"I was a doctor."
"You did well...come on in!"
Finally, Peter reaches the third man and asks the question again.
The man proudly states, "I made $17,500 last year!"
"Really," Peter responds, "and what were the call letters?"

Tonight I was installing a media system in a new conference room and listening to a webcast of "WOLF-FM" (not sure if it was real radio or web-only).

As far as I could tell, at least for the hours that I was listening to it, that station is purely automated -- even the IDs were canned and each track lead into the other. I pondered this.

Then I had a great feeling of irony -- as I was listening to the words "the top brass don't like him talking so much and he won't play what they say to play [...] there goes the last human voice [...] as we celebrate mediocrity [...] there goes the last DJ" ... here was Tom Petty's _The Last DJ_ on a station that (again, as far as I could tell) has no DJ. (IMHO, though, the music was farily good and there were very few interruptions for ads compared to what I'm used to)

Was this just a random pick? Did someone throw this into the setlist for the subtle humor? Does WOLF exist in the real world and do they have DJs?

Thanks,

Lincoln

I think you're ignoring the other part of the curve for a broadcaster and that's the issue of what a broadcaster can earn with a particular format.  The likely reason that country doesn't work in NYC is that advertisers in NYC don't want to target country music listeners, or alternatively even though large in number, they're too spread out to support many small advertisers away from where they regularly travel.

I always found it unusual that WFXI-TV in Morehead City NC managed to

```
get a channel 8 VHF allocation assigned to them.  There's a full-power 7
and 9 less than 50 miles away and another channel 8 just across the
border in Virginia.  That must have taken some extremely creative
engineering.

I understand what you mean and not just from a DJ point of view. I used to be a radio DJ on both am and fm stations. I live near a major city and there is a good % that is canned. The closest radio station to my location is 95% canned. I lost my last radio DJ job because the station decided to broadcast from a feed in California - still there are a few good live (for the most part) stations around.

It seems to me the Commission's impression of service area is badly
pessimistic.  "Protected contour" for a Class C station may be 60dBu but
my car radio gives reliable program-quality reception of signals as weak
as 42dBu.  That's a pretty big collection of stations I can receive with
good signals but might lose to interference.

But that's not what's up in the Chicago area.  Virtually all of these
stations have been around for a LONG time - originally licensed as
10-watt Class D outlets.  Most of the surviving ones are minimal Class A
operations at between 100 and 150 watts ERP.  There is some interference
but it really seems managable.

G.T TYSON wrote:

> I always found it unusual that WFXI-TV in Morehead City NC managed to get a channel 8 VHF allocation assigned to them.  There's a full-power 7 and 9 less than 50 miles away and another channel 8 just across the border in Virginia.  That must have taken some extremely creative engineering.

Under the old regulations adjacent VHF channel full-power stations must be at least 95.7km (just shy of 60 miles) apart.  (87.7km, just shy of 55 miles, for UHF)

The FCC shoehorned in a few short-spaced allotments back in the early 1970s, and it took awhile for them to decide who'd get those allotments.  Channel 8 in Knoxville, TN and Altoona, PA are two examples.

On 8 Aug 2003 22:40:23 GMT, Art Clemons <artclemons@aolSPAM.com> wrote:

>I think you're ignoring the other part of the curve for a broadcaster and that's the issue of what a broadcaster can earn with a particular format.  The likely reason that country doesn't work in NYC is that advertisers in NYC don't want to target country music listeners, or alternatively even though large in number, they're too spread out to support many small advertisers away from where they regularly travel.

One, I think it's snobbery. Two, much of today's Country doesn't sound much different than AC. Three, media buyers are younger than most Boybands and the owners are chicken.

They'd all rather the the 11th
techno-alternative-trance-AC-Urban-Polka station in the market before taking the Country plunge.

I would bet that if Roseland ( a local concert venue in Manhattan) had a country night every week we'd have to rope off the streets to control the crowds. Even better, the guns wouldn't be automatic weapons, they'd be six shooters like the good ol days.

Rich

In addition to the ones in Chicago, here in Birmingham, AL we have two stations on 91.1, both of which are college-run outlets.

WVSU operates at only 500w with a south-oriented directional antenna from atop Shades Crest in the southern suburbs, and WJSR operates with a massive 100w which may be directional to the north from the far-north community of Pinson.

About five years ago they both were 100w nondirectional, but both had really low HAATs and several hills separating the signals. Either way, the only place I could find discernable interference between the two was in east B'ham near Century Plaza and in Tarrant City, just north of downtown.

| operations at between 100 and 150 watts ERP.  There is some interference
| but it really seems managable.

Chicago's in Zone I, so the maximum would be at Class B levels.
(WMBI is grandfathered). Most of the downtown commercial FMs barely
reach the exurban areas.

There has been a little bit of NCE-FM clutter out in the exurban
areas, but, as you note, the clutter in-town is longstanding and
dates back to the days when class D stations were being created
anew in the NCE part of the band.

I've recently upgraded my car stereo and the new unit can decode RDS signals. I know the service never took off in the US but I was surprised in my travels to find that my home area has more RDS stations than pretty much anywhere else.

West of Birmingham, AL I've got 5 different stations providing a signal. So far the only place with more that I've found is Atlanta, with 6 or 7, depending on the area.

Are there any markets with 7 or more stations with RDS? Are there any small communities with 100% RDS coverage?

~Zach
radio junkie

As of noon today, WDAF "61 Country," has become "Country 106.5" as the format has moved over to the FM side, as announced last week.  610 and 106.5 currently are being simulcasted, although plans are to change formats on the AM side, presumably to sports talk.

They are also genoursly referring to themselves as "WDAF-FM," so those calls will eventually be assigned to 106.5 (the top of hour ID currently referes to both stations "WDAF Kansas City and KCIY FM Liberty").  I have no clue as to whether the AM will retain the WDAF calls or new calls would be sought.  I'll bet 50/50, as on one hand, the WDAF calls are tied to the format and there should be something new for the new format.  But on the other hand, the calls are also tied to the frequency, and if they are going to sports talk, using the WDAF calls could be beneficial, especally since the main competiton flouts its historic calls -- WHB.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

Amateur Radio Newsline™ Report 1356  - August 8 2003

Amateur Radio Newsline report number 1356 with a release date of Friday, August 8 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The ARRL tells the FCC to set R-F-I immunity standards for consumer electronic gear, the FCC says it won't decide the merits of a California frequency coordinators actions, and the price of a vanity call sign is going up again.  These stories and more follow on Amateur Radio Newsline report number 1356 coming your way right now.

(Billboard Cart Here)

**

RADIO LAW:  ARRL TELLS FCC TO SET INTERFERENCE REJECTION STANDARDS

The ARRL has told the FCC that improved interference standards for consumer electronic devices is among the most pressing needs being faced by the ham radio community.  This, as the Commission considers the interference immunity performance of receivers.  Amateur Radio  Newsline's Bruce Tennant, K6PZW, has more:

--

The ARRL made its position known in comments July 21st in response to an FCC Notice of Inquiry titled Interference Immunity Performance Specifications for Radio Receivers.   That probe was released last March as ET docket 03-65.  In its filing the ARRL says  that no receiver immunity standards are necessary or practical in the "essentially experimental" Amateur Service.  Instead, says the ARRL, the real need for receiver immunity specifications is in the area of consumer electronics and the FCC must establish stronger interference rejection standards for such devices.

The ARRL's 21 page reply also recounted the recent history of efforts to come to grips with interference from RF sources, including amateur stations, to receivers used in other services, such as TV and radio broadcasting, and to consumer electronics.  The ARRL suggested that the FCC mandate a standard for all consumer electronics or adopt a labeling or grading system.  It also suggested that the FCC not rely exclusively on manufacturers to set standards as a way of lessening the problem.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The politically powerful Electronic Industries Association which represents the manufacturers of consumer electronic gear is categorically opposed mandatory RFI immunity standards.  (ARRL)

**

RADIO LAW:  FCC REFUSES TO DECIDE ON MERITS OF COORDINATORS ACTIONS

The FCC has told the attorney for one side in a California coordination dispute that it will not offer any opinion on the actions of the local frequency coordinator.  This most likely means that a rumored law suit in the mater may now proceed to court.

Attorney Ted Smith of Santa Rosa California had written to the FCC on July

3rd. In part, Smith asked for the Commission decide if the Northern Amateur Relay Council of California's revocation of the Sonoma County Repeater Association coordination status exceeded the coordinators authority under the organizations bylaws, policies, and procedures, or if the Commission consider such an issue a local matter.

But in his July 15th reply, FCC Special Counsel for Amateur Radio Enforcement Riley Hollingswoth states that the Commission does not anticipate making a such decision on the merits of Northern Amateur Relay Council of California's action. He also stated that the Commission considers coordination in the Amateur Radio Service a matter more appropriate for the parties to resolve among themselves locally, or by mediation, dispute resolution or in the local courts.

With the FCC declining not to take any stand in regard to the merits of the Northern Amateur Relay Council position in the dispute between the W6SON and KD6LSO repeaters, it appears as if the decision of the coordination council will stand unless a expected legal challenge goes ahead. Its also a sure bet that repeater coordinators across the nation will be keeping a very close eye on what happens in Northern California if this issue actually goes into court. (FCC, ARNewsline( tm))

**

## RADIO RULES: VANITY FEES GOING UP IN SEPTEMBER

The cost of getting a vanity call sign is going up again this fall. This as the FCC announces that the the ten year license term fee for a vanity call will rise to $16.30 for as of September 9th.

The action to raise the fees comes in answer to petirtions from the ham community to eliminate the fee completely. But the FCC says it expects to collect close to $160,000 from 9800 Amateur Radio vanity call sign applicants during Fiscal Year 2003. That's up by almost $30,000 and 800 applications from Fiscal Year 2002.

Applicants for vanity callsigns will continue to pay the $14.50 fee until the new fee goes into effect in September. Further details on the FCC's position and its response to amateur requests to eliminate the fee can be found in cyberspace at www.arrl.org (ARRL, FCC)

**

## RESTRUCTURING: NCVEC NO-CODE PROPOSAL GETS LITTLE AIR TALK TIME

The petition by the National Conference of Volunteer Examiner Coordinators to the FCC to end Morse testing in the United States is getting allot of discussion in cycerspace, but apparently very little on the air. Over the past week the Amateur Radio Newsline team has monitored the ham bands to try to gauge on-the air reaction and so far there does not seem to be very much at all. An occasional mention of the proposal is about all thats been heard over the past 7 days.

But the opposite is true in cyberspace where the NCVEC petition has become the hot topic of discussion in places like the rec.radio.policy newsgroup and on qrz.com. As far as we can tell, qrz.com com has the most interesting discussion of all. Most of the comments are well thought out with very little in the way of rhetoric. So far close to 350 hams have dropped by to add their voice to the discussion. To read what they have to say or add your thoughts, please take your web browser over to www.qrz.com and scroll down to the topic titled NCVEC files no code petition. (ARNewsline (tm))

**

HAM TESTS: GUNFIRE CAUSES HAM TEST CANCELLATION

I'm Bill Pasternak, WA6ITF, with a late breaking story. Dateline Ventura County California where gunplay has caused the cancellation of a ham radio test session slated for Sunday August 10th.

The exams we to be held at the East Valley Sheriff Station in the city of Thousand Oaks. The session was canceled following an incident earlier in the week where a disgruntled man drove up and attacked Ventura County sheriff's deputies with a gun. No one in the building was injured. The deputies responded and killed the attacker.

But as a result of her gunfire the community room where the ham radio tests are held was damaged. It's also considered as a part of the crime scene and is off limits to the public until further notice.

The Conejo Valley Amateur Radio Club is the group that sponsors the bi-monthly test sessions. It says that it hopes to resume its normal exam schedule in October. (AA6JR)

**

INTRUDER WATCH: MORE CB'ERS ON 10 METERS

Sunspots activity may be down but that's not keeping rogue CB'ers and other intruders off the 10 meter band and spectrum near-by. Q-News reports that while normal ham radio activity on the 21, 24 and 28 MHz bands is down, occasional openings of the 10 meter band shows a number of unlicensed long line fishing net beacons in operation. Also being heard is Citizens Band radio type traffic in the band. Q-News also says that CODAR pulse transmissions in the region 24.950 to 24.995 MHz are continuing and are sill unidentified.  (Q-News)

**

RADIO LAW:  UK HAMS OBJECT TO RADIO SHOW ON BPL

Last week we reported on the signal degradation that Amateurs in the United States will face if the FCC permits power companies to become suppliers of broadband Internet.  But US hams are not alone. The United Kingdom's national ham radio society is angry at a report by the BBC that touts the system without telling the other side.  They say the report is not fair and balanced.  RSGB news reader Jeramy Boot, G4NJH, is here with the rest of the story:

--

The RSGB has contacted the BBC to point out its objections to an item on the BBC TV 6 o'clock News on Thursday the 24th of July. The item referred to the use of the electricity supply as a medium for Internet access. This is variously referred to as PLT, PLC or Powerline Communication.

The following is a quote from the e-mail sent to the BBC TV News: "The news item was unbalanced in that no mention was made to the very serious problems of radio interference inherent in Powerline technology. At the present time there is strong disagreement as to how much radio interference should be permitted. Needless to say radio interests, which besides ourselves, include the BBC and many other organisations are anxious that radio interference should be minimised."

The e-mail went on to point out the difference between the systems based on ADSL technology, which are currently being deployed in considerable numbers, and the proposed PLT systems.

Jeramy Boot, G4NJH.
--

At airtime, it is not  known if BBC 6 plans a follow up report giving the negatives of BPL.  An interesting article on Broadband Over Powerline communications is available by clicking the link marked "powerline communications" on the RSGB website at www.rsgb.org.  (GB2RS)

**

RESTRUCTURING:  DENMARK GIVES HAMS 70 MHZ

Amateurs in Denmark have been given permission to operate on the 70 MHz band.   This, according to OZ2M who says that three frequencies are available at 70.025, 70.050 and 70.100mhz.

Individual applications have to be filed for the relevant frequencies and the maximum power is 25 watts, but there are no other restrictions.  In other words, the 70 MHz allocation is available to all license classes in

Denmark and all modes may be used. (UBE)

**

## RESCUE RADIO: FIRES DAMAGES TWO REPEATER INTERTIES

Back here in the United States, Arizona wildfires have damaged two repeater newtworks. Blazes wiped out repeater relay links on Mount Lemmon, Arizona, for both the Zia Connection and the Cactus Intertie. Both are wide area linking networks. The fires occurred in mid July. (Repeater Owners Remailer)

**

## RESCUE RADIO: ECHOLINK ASSISTS DURING HURRICANE CLAUDETTE

Traditional ham radio communications during Hurricane Claudette in Texas in July were augmented by an Echolink connection keeping key players in constant contact. According to the ARRL Letter, the Nacogdoches Amateur Radio Club used Echolink to tie together coastal repeaters, the National Hurricane Center, the National Weather Service, the Texas Department of Public Safety and most coastal emergency operating centers. Club spokesman Tim Lewallen, KD5ING, said that at the height of the storm, there was "almost constant" activity on the link, mostly between the National Hurricane Center and ham spotters providing real-time, first-hand reports. (ARRL)

**

## ENFORCEMENT: $8,000 FINE AFFIRMED FOR FAILURE TO INSTALL EAS EQUIPMENT

The FCC has affirmed an $8,000 fine against WENA of Yauco, Puerto Rico. This for the stations failure to install Emergency Alert System equipment. The FCC says that Puerto Rico is a possession of the U.S., and is therefore governed by the it's Regulations and rules. The complete story is in cyberspace at: http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-03-2360A1.doc (CGC)

**

## AT THE COMMISSION: FCC OFFERS FREE WiFi TO VISITORS

The FCC says that it will provide free wireless Internet access to visitors at its Washington, D.C. office, but there are a few caviats. Visitors must bring their own hardware and software and can use the service only in two specific locations. The FCC alao says that it won't provide any technical support. More is on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-237306A1.doc (FCC)

**

## RADIO POLITICS: PRINTER ERROR IN AMSAT BALLOTS

An error by AMSAT's printer has resulted in a reprinting and remailing of ballots for the amateur satellite organization's board of directors.

The CQ website reports that the mailing included biographies for candidates from a past election. As a result, the original white ballot cards sent out with the first mailing will not be counted. If you never mailed yours in simply disguard it.

Only the replacement yellow ballot cards sent in the second mailing will be accepted as valid votes by AMSAT members. These are due at AMSAT headquarters by September 15.

By the way, AMSAT is not ouut any money on this one. The printer bore the total cost of the reprinting and remailing. (ANS)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

NAMES IN THE NEWS: A WEB PAGE FOR NIKOLA TESLA HISTORIANS

In the world of electronics and telecommunications, inventor Nikola Tesla was one of the more mysterious of our early technological pioneers. His experiments and demonstrations caused some to believe he was a genius, while others had to wonder if he was engaged in witchcraft.

Much of what he wrote nearly a century ago still evades our understanding. If you're intrigued by the man and his specific visionary approaches to physics, you can visit his selected writings at www.tfcbooks.com/tesla/contents.htm (CGC)

**

NAMES IN THE NEWS: KA3HDO PROMOTED AT NASA

Amateur Radio on the International Space Station Chairman Frank Bauer, KA3HDO, has been promoted to the highest technical rank accorded a NASA scientist or engineer. Bauer, who works at NASA Goddard Space Flight Center in Maryland has been named as a Special Technical or S-T. This, in recognition of his record of exceptional technical achievement in the field of guidance, navigation and control.

KA3HDO's promotion came through in time for him to be appointed to the NASA deputy administrator's new blue ribbon panel on Alternatives to the Orbital Space Plane. Bernard Seery, chief of the Mission Engineering and Systems Analysis Division in the Applied Engineering and Technology Directorate, said Bauer's new ST rank formally recognizes him as a lead guidance, navigation and control expert at the Agency level. (ANS)

**

HAM RADIO IN SPACE: AN ALL HAM CREW FOR ISS EDITION 8

The ARRL reports that both members of the recently-announced Expedition 8 crew for the International Space Station are hams. Astronaut Mike Foale, KB5UAC, will be the crew commander and science officer. Cosmonaut Alexander Kaleri, U8MIR, will be I-S-S flight engineer and commander of the Soyuz capsule used to transport the crew members to and from orbit.

Both Foale and Kaleri are veterans of the Mir space station. They'll be joined briefly by a third ham, Spain's Pedro Duque, licensed in the U.S. as KC5RGG, who will represent the European Space Agency. Duque will return to Earth with the departing Expedition 7 crew. The crew exchange is scheduled for mid-October. (ARRL)

**

INTERNATIONAL-UK: HAMS AT GASS 2003

Amateur Radio will be a part of a major science exhibition down-under. Q-News Graham Kemp. VK4BB, reports:

--

The Great Australian Science Show (GASS) will be held in conjunction with National Science Week at the Melbourne Museum, and amateur radio is to be on display for three days.

WIA Victoria with the help of its member clubs are participating in the show, for three days from Saturday 16, Sunday 17, and Monday 18 of August. The Melbourne Museum is open from 10am to 5pm.

Displays of IRLP, Morse code, VHF Transceivers, Crystal sets, ARDF equipment, Satellite tracking software, Power Point Computer Displays and more are planned.

--

Again, those dates are August 16, 17 and 18 at the Melbourne Museum in Melbourne Australia. (Q-News)

**

ON THE AIR: UK HAM TO DO SUMMIT BACKPACK

On the air, word that Richard Newstead, G3CWI, is planning a long solo ham radio backpacking trip across the hills of South Wales this month. His objective is to activate 15 of the hills in the Brecon Beacons National Park on 40-meter CW for the U-K's Summits on the Air award program.

The walk will be over 90 miles with a nearly 25,000 feet of ascent. In addition to the High Frequency radio gear, G3CWI will be carrying all his own food and camping equipment. The walk is expected to be completed by the 17th of August. (RSGB)

**

ON THE AIR: RUSSIAN POLAR MOUNTAIN EXPEDITION.

And speaking high locations, word that the Russian Robinson Club plans to be active as R3RRC/9 from August 14th to the 25th from the Polar Ural Mountains. Their operations will be on both the H-F and VHF bands. If you can read Russian, more information is available on the web page link you will find in this weeks print edition of the Amateur Radio Newsline report. More is on-line at www.hamradio.ru/rrc/AWARDS/rma.htm
QSL via UA3SGV: Andy Blinushov, P.B. 180, Ryazan-35, Russia, 390035.
(OPDX)

**

DX

In D-X, word that M0GMT, and DJ9AO, are teaming up for an ambitious DXpedition to Cambodia running through the 18th of August. hey will use the callsign XU7ACT for normal operation and XU7ACU for the WAE CW Contest on August 9th and 10th. QSL's for both calls go via G3SWH. (GB2RS)

And N6XIV/KH9 is expected to be active again from Wake Island for about three weeks. This will be his last Wake Island work assignment for 2003. He operates on SSB only whenever possible during his very limited spare time. (GB2RS)

Lastly, word from Great Britain that nominations are being sought for the G5RP Trophy. This is an annual award to encourage newcomers to High Frequency D-X'ing and is awarded for making recent rapid progress in D-Xing, which only newcomers have the scope to do. Nominations should be sent to Colin Thomas, G3PSM, by e-mail to hf.chairman@rsgb.org.uk Nominations must be received by the 31st of August at the latest. (GB2RS)

**

THAT FINAL ITEM: THE NIGERERIAN SCAMMERS ARE AT IT AGAIN

And finally this week, theres another scam involving Nigeria and this one is targeting Amateur Radio. But this time a ham has outwhitted the alleged scammer. We have more in this report:

--

It all started about a month ago. That's when Jeff Novak, KB3DIV, of Lucinda, Pennsylvania, placed an ad on the QRZ dot com website to sell his Yaesu VX5 hand held. And in a follow-up posting to that website, Novak tells the story of what happened next.

KB3DIV says that he was soon contacted through e-mail by a person identifying himself as James Cruise. Cruise who stated he was from Africa and that he wanted to purchase the unit.

To make a long story short Cruise insisted that a contact here in the United States would send Novak a check for 4800 dollars. Cruise wanted Novak to deduct the purchase price of his HT along with shipping cost and send him a moneygram for the difference.

Soon, Novak received a bank draft for the 4800 dollars. Several phone messages were also left on Novak's cell phone from Cruise. These urged KB3DIV to quickly send him the difference and H-T.

But Novak became very suspicious. So he called the F.B.I. and explained what had transpired. They told KB3DIV that the supposed bank draft is a actually a credit card check and most likely already void. Also that the person calling himself James Cruise was most likely a scam artist. In other words, had he cashed it and sent Cruise the balance, the chances are that his bank would have dinged him for the amount of the bounced check and he would have been out his VX5 to boot.

But in this case the targeted victim was allot smarter than the alleged con artist. He asked the F.B.I. what to do. It advised Novak to destroy the check. He did, and also informed the person calling himself James Cruise that the deal was dead. And when it was all over, KB3DIV still had his VX5, and it was the person allegedly trying to scam him that was - proverbially -- left holding the bag.

For the Amateur Radio Newsline, I'm Mark Abramovich, NT3V, in Philadelphia.

--

Score one for a rather smart ham.

**

Bonneville's KKDV (95.7) in San Francisco went from "The Drive" (classic hits) to "My Country Station" Monday (8/11) at noon. The call letters haven't changed so far. This marks the return of a country format on an FM signal to the central part of the Bay Area.

Reportedly, listeners will be asked to "select" a new slogan (which probably means one or two have been preselected already). There are no announcers or personalities at the present time and the station generally sounds like a small-market automated country station, complete with at least one moment of dead air and hokey announcements about listeners' helping select the music, build the radio station, and so on.

With country's shaky history in San Francisco and nearby areas, it was probably important for this station to put its best face forward from the start. Instead, it's sounding hokey and small-time.

This is the fifth format on the 95.7 frequency since classical KKHI was dropped by then-new owner Westinghouse nine years ago.

Other country stations in the Bay Area have mostly suburban coverage: KRTY for the South Bay and KRPQ in Rohnert Park for Sonoma and Napa counties.

```

I don't think Bonneville has changed since the days when someone I know managed a station for them in New York City.  He said that he was never asked about religion.  Of course he is pretty conservative, and the format was one that was unlikely to cause heartburn.

Bonneville owns three "stations" here in the DC area:

```
WGMS - commercial classical
WTOP - straight news, no "talk", no discernable tilt
        see their web site www.wtopnews.com
WWZZ - a rock station that may well be watered down "to suit"
```

WCBN - 30 Years of Freeing Your Mind - Listen to us online!
=20
WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

=20

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

R J Carpenter <rcarpen@erols.com> had written:
|
| I don't think Bonneville has changed since the days when someone I know
| managed a station for them in New York City. He said that he was never
| asked about religion. Of course he is pretty conservative, and the format
| was one that was unlikely to cause heartburn.

When Bonneville ran CHR on 95.7, there didn't seem to be much
different about the fact that Bonneville was running it, although
it was fun in a very minor kind of way to refer to it as "Mormon Hit Radio".

```

I have to differ with you on this one RJ.  The Mormon sensibilities have definitely made their share of appearances on the WWZZ signal over the years.

Back when WWZZ/WWVZ was a half decent CHR (before CC decided to put Rhythmic CHR on 99.5 and Bonneville bailed on the format altogether) the were notoriously touchy with the dump button during the morning show, they edited songs excessively; etc. One song example that really used to bug me from the late '90's - "Sexual" by Amber - Bonneville edited the song for airplay and changed it to "Sensual"; subtle, yet highly annoying. In certain urban cuts, they would edit out not only the foul language, but also references to drugs that they (apparently) thought were too overt. This often has the effect of butchering songs - resulting in long lyrical silences throughout the cut.

I often wondered - "if they're so offended by the content, why do they spin these songs?" I guess someone at Bonneville finally agreed - to my knowledge, there are no CHR's left in the Bonneville stable. Can anyone think of an example of a CHR still owned by Bonneville? I don't claim to understand the programming decisions, but I do think that CHR content and Bonneville corporate sensibilities were often in direct conflict.

Best,

Jeremy Powell

"The Drive" was the best thing on radio in the past 30 years. It was
great the day it came on the air and got better and better every week.
The slogan said it all: "Remember the way radio used to be, well its
that way again".
But now its just, "Remember, listeners don't count. We can jam
anything into their ears we think will bring us more money". No wonder
there isn't any listener loyalty anymore. The only radio we can count
on being here tomorrow is NPR because we get to vote with our own $$.
Maybe this is a good time check out satellite radio. It surly isn't a
good time to listen to Country - hell its NEVER a good time for that
crap!

Take a listen to the AM Stereo airchecks on this site:

http://www.1240keva.com/airchecks/

KEVA is an 880-watt Class C station in Evanston, Wyoming, using a
vintage McMartin vacuum tube (valve) transmitter and a complete
1983-era audio chain: a CRL AM Stereo Preparation Processor, a CRL AM
Stereo Maxtrix Processor, and a Motorola C-Quam AM Stereo Exciter.

The audio in the MP3 clips was recorded from KEVA's Motorola AM Stereo Modulation Monitor, so you are hearing KEVA exactly as they sound on the air -- not from a direct feed from their audio board.

Now, for those of you who have heard IBOC or DRM... can digital AM ever sound this good?  I don't think so... there's only so much quality you can squeeze out of a 20 to 36 kbps data stream.  At this point, neither IBOC nor DRM have managed to eliminate the swishy, gritty, phasey, heavily artifacted "28.8K RealAudio Web-Cast" type of sound from their digital audio.  And except for a MAJOR revolution in the science of "lossy" audio compression, I don't think they ever will.

Digital does have its advantages... but not in AM audio quality!

Can't comment on point three, but your first two are bulls-eyes!

Point two in particular is right on target. when talking about today's "mainstream" country. The currents, recurrents and even most of the oldies sound closer to the hits of the Top 40 Era than the music being played on CHR and some AC stations. In fact, some of the song and artists played as oldies on mainstream country stations *are* straight out of the Top 40 Era -- Johnny Cash, Statler Brothers, Oak Ridge Boys, Dolly Parton, quite a long list of country acts that are fondly remembered by Baby Boomers who grew up on Top 40.

And let's not forget the number of country performers, especially female artists, who are actually getting a lot of play on AC radio and VH-1. Sometimes I turn on VH-1 while I'm at the computer just because I enjoy looking at Faith Hill, Shania Twain, Martina McBride, etc.

Country has always been an important part of what started as Top 40 and has evolved into Adult Contemporary. I grew up listening to rockabilly, along with the blues, R&B, and Brill Building pop that also contributed to the big hits of the '50s, '60s and early '70s. At the time I didn't care for much "hardcore" country -- George Jones, Tammy Wynette, Loretta Lynn, Conway Twitty (himself a Top 40 one-hit wonder with "Make Believe"), Porter Wagoner and the like -- probably because it was the "old folks" music my parents and grandparents listened to. But when Ray Charles did an entire album of country songs, I listened and liked what I heard. When Roger Miller and Ray Stevens turned out very clever novelty songs, I didn't care how they were categorized. When Patsy Cline sang "Crazy", it didn't matter one bit that both the song and the singer were considered country. And to be honest, I didn't consider Johnny Cash's "Ring Of Fire" country at all, since I JUST KNEW that country music never used mariachi trumpets!

All these artists were able to co-exist on the Hot 100 with Chuck Berry, Brook Benton, the Beach Boys, the Four Seasons, and all of the Memphis, Motown and British Invasion acts. If the music was good and spoke to the teenaged heart-and-soul, that's all that mattered to us back then.

Today's music industry, including music radio formats, is actually hurting itself with its emphasis on format fragmentation. An artist, label or station that tries to reach only a specific audience is in trouble when the day comes that the audience stops listening and buying. OTOH, an artist, label or station with broad appeal can continue to sell to a maturing/aging audience even as a new generation discovers it -- even if that sort of appeal skips a generation now and then before being rediscovered, as happened with Dolly Parton and more recently with Tony Bennett.

>They'd all rather the the 11th
>techno-alternative-trance-AC-Urban-Polka station in the market before
>taking the Country plunge.

And when the Flavor Of The Month changes, they'll change format in search of another short-term success.  Their problem, not the listeners'.

Now that I'm a fulltime listener, the music-station presets on my radios are filled with various flavors of oldies stations.  If I'm listening to a Classic Rock station and a song comes on that I don't especially care for, I punch over to a Classic Hits station ... or an AC with an extensive oldies library.  If all else fails, I grab a CD from the Time-Life or Rhino catalogs.  Rap, trance, boy-bands and the other genres that appeal to today's youth may or may not be popular a few years from now; the music I listen to has  been around for fifty years, more or less, and it still appeals to the largest and most affluent generation in history.

Maybe today's youth-oriented stations are actually the modern equivalent of the pioneering Top 40 stations, and they'll be successful for decades to come.  But that's not the way I'd bet.  I just don't see a modern-day Alan Freed, Bruce Morrow or Art Roberts among the current crop of jocks.  Nor do I see very many record industry execs these days who working to find and develop artists with even moderately broad-based appeal.  Tommy Mottola has had considerable success, but he's still a long way from becoming the next Clive Davis; as far as I can tell no one is even trying to become the next Berry Gordy, Sam Phillips or Phil Spector.

>I would bet that if Roseland ( a local concert venue in Manhattan) had
>a country night every week we'd have to rope off the streets to
>control the crowds. Even better, the guns wouldn't be automatic
>weapons, they'd be six shooters like the good ol days.

I dunno.  These days even rural deputy sheriffs and Texas Rangers (the closest modern kin of the Old West lawmen) carry semi-autos.  People just don't respect tradition anymore.<g>

Couldn't my "watered down to suit" cover this?

Greetings,

I would like to make you aware of the newest radio show prep site on the net. The Online Prep Resource hopes to become the one site a jock will need to complete all their prep. With a listing of the top news of the day in entertainment, politics, world news, and kicker stories, in addition to links to many news, sports, and other prep resources, this is the one site a jock needs for all that is radio. The OPR is a free service, and will stay that way. Being in the radio industry, I know how important show prep is to ratings and sound. There should be no reason that a jock would have to spend 3 hours a night hitting as many as 20 sites to get the prep they need for their show. The OPR has everything you need in one site. Please feel free to browse the site (www.oprweb.com), and send me your comments (editor@oprweb.com) on what you think would make it better for YOU.

In article <bhg5rb$9u9$1@xuxa.iecc.com>, Walter Luffman wrote:

> few years from now; the music I listen to has been around for fifty
> years, more or less, and it still appeals to the largest and most
> affluent generation in history.

And it's a generation that is aging out of the range advertisers want. It's also a generation whose upper tiers are dying off.

The music will still be around, no question. Just start getting used to not hearing it on commercial radio anymore (and maybe not even non-commercial radio as the bulk of that is either religous, NPR war-on-terror talk, Pacifica it's-whitey's-fault talk or kids more interested in playing their favorite records).

It's not a question of how affluent the demographic is...it's how WILLING to SENSELESSLY and IMPULSIVELY part with that money that is the issue.

How many 60-year olds do you know are drowning in credit card debt, car payments, etc. versus how many 25-year olds who "GOTTA HAVE" the latest car, 5 credit cars in their wallet, cell phones, PDAs, the latest music, the trendiest clothes, etc.?

Last time I checked, places like the Galleria Mall in White Plains, NY and the Jefferson Valley Mall in Yorktown Heights, NY were full of teenagers (especially teen-aged girls) spending (their parents') money, not senior citizens and baby boomers.

And I'm sure that's the situation with most of such places where "middle America" shops.

Brattleboro, Vermont

Our local radio station, radio free brattleboro, is currently documenting community support to show the FCC that indeed, we have the "authority to operate" as granted to us by the public, who own the airwaves. We are a non-profit, non-commerical, 10 watt station with a mission to train local citizens in the art of radio broadcasting and the rights and responsibilities inherent to free speech.  Our lawyers have advised us that since the FCC has not defined what "authority to operate" is, we can define it as community support.  Since we webcast, you are our community too!

Please click on this link to read our petition & register your (electronic signature) support for our project.

http://www.petitiononline.com/07131998/petition.html

Please note that this is for Non-Residents of Brattleboro, VT only, and only one signature can be registered per computer.  If you've already signed, please take a few minutes to pass this along to your contacts who care about media reform and continuing to challenge the increasing homogenization of corporate media.

You can check out our website at www.rfb.fm where you can access our streaming web signal and look at our program guide.  More information on our current struggle to remain on air despite a recent visit by the FCC is available at www.ibrattleboro.com, and by contacting us at rfb@sover.net

Thank you,

Sara, "DJ Undahcovah"

"It is time to move from being a passive consumer of media to becoming a co-creator in a movement which gives voice to the voiceless. If you can't communicate, you can't organize. If you can't organize, you can't fight back. And, if you can't fight back, you have no chance of winning."

Stephen Dunifer of Free Radio Berkeley paraphrasing "Scoop" Nisker

>
> Now, for those of you who have heard IBOC or DRM... can digital AM ever sound this good?  I don't think so... there's only so much quality you can squeeze out of a 20 to 36 kbps data stream.  At this point, neither IBOC nor DRM have managed to eliminate the swishy, gritty, phasey, heavily artifacted "28.8K RealAudio Web-Cast" type of sound from their digital audio.  And except for a MAJOR revolution in the science of "lossy" audio compression, I don't think they ever will.
>
> Digital does have its advantages... but not in AM audio quality!

I agree broadly with your conclusions regarding IBOC/DRM - however - you are incorrect in labelling low kbps RealAudio as being completely awful.. It depends on the site specification regarding the codex and how carefully the site administrator works on the sound objects/transaction model prior to conversion..

I'm generating very close to AM stereo quality RealAudio at fixed 20kbs without that 'bottom of the well' sound or any buffer problems on low speed connections world-wide - have a poke around the site below.. I run 40-45 streams per 1mbs of outbound pipe and still feed a general site through the same server head..

I have picked up a number of wireless/mobile users over the past year given that my feed doesn't overload their available bandwidth at the CPU while still providing a pretty sound quality at G2+ and I have been suggesting on and off that WiFi may provide for a better over all software based receiver model.. I can do the same with video feeds - but that limits the feeds to about 20 streams per 1mbs or pipe and advanced Flash/SMIL falls somewhere around 30 feeds per 1mbs outbound..

I apologize and say again that I'm not really a RealAudio zealot or anything - I can't even get them to list my little bitcaster on their site.. But credit where it is due - it's a pretty good codex and multi-media streaming solution overall.. Broadly ported to *many* operating systems and codex too..

I wonder now if the same model applies to IBOC/DRM.. Can you force minimum kbps before accepting transmission as viable? If so - does it improve the quality at the receiver head while limiting some of the problems you have outlined?

A LOT of the complaints related to RealAudio have MUCH more to do with bitcasters cheaping out, not really understanding the details at the server/codex or trying to mess around client side for the marketing bulls rather than anything particularly wrong with the particular multi-media solution itself..

# Voice Over Talent Recording - Frequently Asked Questions

1. Do I have a good voice?

Voice work is more than just the sound of your voice. It is the ability to read, persuade and perform under the intense pressure of the studio recording session, and to speak truthfully under imaginary circumstances. Everybody has a unique voice. Few know how to entertain with it.

2. How do I get an agent?

The best way to get an agent is to put together a high quality professional demo which not only shows off your voice, but your sense of humor and your �personality'. We want the agent to say "That's the kind of performer I want to represent."

3. What's a good voice over demo?

A great demo will show off the range of your voice and your powers of persuasion, fully produced with music and sound effects, professionally voiced with elegance, clarity and wit. Your demo should show you at your most persuasive, at your most charming

-Make your tape 90 to 100 seconds (aim for the 90).
-Your first piece should be your most natural voice.
-Aim for five to nine pieces within the 90 seconds.
-Stay away from accents and impersonations unless you do really good ones. If you do use them, keep them short.
-The trick is to be able to read a lot of copy in a short amount of time. You'll need to be able to speak quickly without sounding like you are. Watch for "popping" letters (mainly ps and ts).
-GOOD COPY IS ESSENTIAL!
-Humor is good. We love humor.
-Most talent agents prefer commercial copy; industrial reads are not necessary.
-Smile while you're reading the copy; it really does add warmth to the sound.
-Keep in mind variations in tempo, rhythm, energy level and enthusiasm level, as well as pitch and volume.

4. Can I do voice work part-time?
Voice work is a business like any other which requires your full attention 8 hours a day, 5 days a week. You must develop a strategy of self-promotion by creating a relationship with recording studios, or creating your own in-home studio because you will be forever producing new demos for prospective clients and replacing old material with newly produced spots. It is important to stay current. Things constantly change in advertising. New trends demand new voices.

5. How much money can I make?
Call your local ACTRA performer's union office or log onto their websites and ask for the union rate card for a :30 second TV voice over commercial session and residual schedule. You'll be pleasantly surprised at what you see.

6. Do I have to join the union?
If you want to be recognized as fully professional, you must eventually join the union. Your local ACTRA performer's union office will outline the requirements necessary to become a member. While you are non-union, you can gain valuable experience by voicing public service announcements, volunteering at the local radio station, seeking non-union commercial work, reading for the blind etc. Your payment and reputation will grow with repeat business until you will be compelled to join the union with all it's benefits.

Good luck and welcome to the business!

Can Digital AM ever sound good?

Not as good as analog.

Analog cell phones sound better than digital cell phones.
Analog Laser Discs look better than digital DVDs.
Analog cable looks and sounds better than digital cable.

Why would digital AM sound better than analog AM?

```

Have to agree with BR. I was listening to "The Drive" since day one. It "almost" reminded me of the old KMPX days in SF. The way they changed format over night and not telling the listeners ahead of time just sucked!!!! The ONLY way I knew ahead of time was the discussion in ba.broadcasting about the firing of the on air talent. 95.7 has been deprogrammed from all of my digitally tuned radios. Give me back my Classic Rock, Album Sides, and songs I haven't heard in 30 years.....I like country, but I like my rock as well......Eric

I am in charge of getting a 1200 song Classic Rock music library for a new small college radio station. I would like to ask the pros here what is the cheapest source for this music. We have taken care of the ASCAP/BMI/RIAA annual fees but now I need the actual music.
I know about TM Century but they seem a little high priced. This is all classic rock so the list of songs we need is set at about 1200

songs.
Any information or links would be greatly appreciated. Thanks!

> you are our community too!

1. you can never have too many lawyers. get some more!

2. look at case law!!!!! MicroKind prevailed in the appelete court!!
(look up the case file and read how they argued the case and why they
prevailed in the appeals court).

3. Read up on the lost cases to.........understand what the arguements

were and why they lost the cases.

4. read read read all case law on Pirate radio court cases!!!!!!!!!!!!

5. craft an argument (an original, one or the one Microkind used to temporarily previal)..................don't bother crafting an argument which has lost over and over in the courts (i.e. 1st amendment rights argument).

6. forget the 1st amendment!.............try for specific case law where the pirate previaled (again Microkind)(I think I remember that there was another (preacher in Indiana?) who gave the courts a good fight).

7. General appeals to Constitutional rights and precepts invariably fail in the real world courts. So using the 10th or 9th amendments is out........................well..................the tenth argument (i.e. municipality rights might be interesting). If you can get your mayor and city counsel to publically defend and endorse you that would be a good thing.

goodluck........you will need it!

> I agree broadly with your conclusions regarding IBOC/DRM - however - you
> are incorrect in labelling low kbps RealAudio as being completely awful..

You are correct that when properly encoded, the newer versions of RealAudio can sound surprisingly good at low bit-rates.  For stereo music web-casts, RealAudio at 44 kbps is generally very crisp and clear, while 32 kbps gets a little "watery" but is otherwise still very acceptable.  20 kbps isn't all that great, but at least the compression artifacts manifest themselves in a way that isn't grossly objectionable to the ear, unlike WMA's horrible tinny, echoey, metallic sound, and MP3's awful twinkling and chattering noises.

However, given particularly "challenging" audio to encode, just about *any* lossy compression system is going to create audible flaws in the sound.  I can even hear artifacts in 384 kbps MP2 encoding, which is considered by the broadcast industry to be a "CD-quality" reference standard, and is what many radio stations as well as the entire XM satellite service use to store their music.

Nevertheless, RealAudio at low bit-rates still sounds better than IBOC or DRM! DRM's "simulated" treble creates a gritty, artificial-sounding high end no matter what bit-rate it's used at, and IBOC sounds just plain *awful* at their AM bit-rate of 36 kbps.  They claim to have developed a new proprietary "HDC" codec which will improve the quality of IBOC's audio greatly, but I'll believe it when I hear it!

Most Top 40 Oldies fans (including rockabilly, blues and other genres popular in the early portion of that era) are Baby Boomers, the leader edge of which group is only now in its late fifties. Even extending the beginning of the "Top 40 generation" upward a few years, they're in their early 60s at most, which means relatively few already dying of age-related causes.

And we Baby Boomers generally have more disposable income today than we ever had in our past. The kids are out on their own. We're either at or just past our peak earning years. Our homes are already paid off. We can treat ourselves to luxuries we could never afford when we were younger. Believe me, I buy a lot more than Metamucil and blood-pressure pills!

>The music will still be around, no question. Just start getting used to
>not hearing it on commercial radio anymore (and maybe not even
>non-commercial radio as the bulk of that is either religous, NPR
>war-on-terror talk, Pacifica it's-whitey's-fault talk or kids more
>interested in playing their favorite records).

I just finished reprogramming the station memory in my Grundig YB 400 PE; four of the first ten stations play some form of rock/pop oldies. (Of the other six, four are commercial talkradio and two are public radio. Positions 11 through 40 are filled with distant AM talkers, a couple of oldies stations I listen to when in Memphis or Nashville, a country station where a friend works, and shortwave broadcasters such as BBC and Radio Netherlands. Interestingly enough, some of the international broadcasters play pop oldies now and then; rockabilly and blues are more popular in Europe today than they have ever been in the U.S.)

>It's not a question of how affluent the demographic is...it's how WILLING
>to SENSELESSLY and IMPULSIVELY part with that money that is the issue.

Let's see ... I have two new PCs (built my own desktop, bought the laptop), a motorcycle, guitars, two telephone lines (with DSL on one of them) plus a cellular telephone, a few other toys. I go out to eat once or twice a week. I go to movies, and also buy an average of two or three DVDs per month. My CD collection is constantly growing, although admittedly it's mostly replacements for my vinyl albums and 45s. My two cars are both 2001 models; I'll probably trade one in on a newer model next year. I could go on, but you can see my point -- I'm not just sitting on my money, although admittedly I am saving more now than I ever did as a younger man. (Then again, stockbrokers and mutual fund companies advertise on radio too.)

Okay, I'll also admit that I buy Metamucil too. I don't buy blood-pressure pills, at least not directly; that's what insurance and HMO premiums are for.

>How many 60-year olds do you know are drowning in credit card debt, car
>payments, etc. versus how many 25-year olds who "GOTTA HAVE" the latest
>car, 5 credit cars in their wallet, cell phones, PDAs, the latest music,
>the trendiest clothes, etc.?

Who cares? Most of my contemporaries would rather pay off their credit card debt, or just pay cash and stay out of debt in the first place. You might have a point when it comes to "the trendiest clothes", though -- I wear a business suit when I must, jeans or khakis when I can, but I stopped worrying about being trendy a long time ago.

>Last time I checked, places like the Galleria Mall in White Plains, NY and
>the Jefferson Valley Mall in Yorktown Heights, NY were full of teenagers
>(especially teen-aged girls) spending (their parents') money, not senior
>citizens and baby boomers.

I'll grant you that most of the people who hang out in malls are teenagers. But a typical kid who hangs out in malls, sipping Frozen Cokes in the food court and buying a CD or two doesn't put nearly as much money in the cash register as an Old Fart like me who buys jewelry, major appliances, home entertainment gear, gourmet food, nutritional supplements, power tools and nice (but not trendy) clothes.

I don't go to the mall nearly as often a typical teenager, but I spend much more than a few bucks every time I do go. And I also spend a lot of money in places other than the local mall. Kids get their ears and other body parts pierced; Old Farts get hearing aids, lineless bifocals (or laser surgery), plastic surgery to remove baggy upper lids that impede vision, and otherwise do what we can to keep what we still have in working order. Kids buy whatever brand of sneaker is hot this season; Old Farts buy sneakers too, but we also buy dress shoes, work shoes, walking shoes, cowboy boots, motorcycle boots and sometimes special orthotics that go into our shoes. Kids buy pizza at Sbarro; Old Farts have their pizzas delivered, and go out for steak, Italian, seafood, Chinese or whatever.

Don't tell me that my generation doesn't spend money, because I know better. And our numbers mean we spend a lot of it.

And lest you get the wrong idea, I'm not wealthy. Far from it, in fact. But I'm comfortable, I don't have children living at home, and I buy quality stuff that lasts instead of junk that ends up in the closet ... or the trash.

>And I'm sure that's the situation with most of such places where "middle
>America" shops.

You have something against Wal-Mart, Sears and Best Buy? Yeah, I shop at those places. I also spend lot of money at Home Depot, PetsMart, Office Max, Kroger, various upscale department stores, Starbucks, and even Burger King (although I prefer Sonic Drive-Ins ... I tip the carhops, something I doubt many teenagers ever do). All those places are part of "middle America". I have no idea where people in parts of America outside the "middle" shop. And I don't especially care where people outside the United States shop, although I would presume they shop primarily in their home countries because of convenience.

>Digital does have its advantages... but not in AM audio quality!

Sigh.  There are those who can show better performance using vinyl records than a CD recording, and there are those who can show really good performance with a tube amplifier.

--BUT THAT'S NOT THE POINT.

Unless you're really close to this broadcast station and your AM receiver is of unquestionable quality, you'll never know the difference.  The beauty of digital broadcasting is that it works better overall in a wider variety of conditions and the radio doesn't have to be outrageously large, heavy, expensive, or high maintenance.

Don't misunderstand me, this station probably is quite an achievement. Unfortunately its an achievement that will hardly get noticed but for maybe a handful of listeners.  That's the unfortunate fact of life.

The halls of technological progress are littered with high performance efforts like these...

> the rights and responsibilities inherent to free speech.

Yeah sure.

One of the responsibilities inherent to all of our liberties is to respect and follow the existing laws.  If you want to work for legislative change, that's fine....but you don't get laws changed by breaking 'em.

I believe that "Radio Free Brattleboro" is run out of a urban youth center. Apologies if I'm incorrect about that, but if I'm not.....way to go; great example to set for these young people (NOT!)

I vaguely recall early on in Z-95.7's run (after they started having
live DJs), their morning drive guy was let go for some kind of alleged
indecency.  Also, many of the songs they played that had indecent or
suggestive lyrics were edited.

news:<bhgfk0$h2c$1@xuxa.iecc.com>...

> Our local radio station, radio free brattleboro, is currently documenting community support to show the FCC that indeed, we have the "authority to operate" as granted to us by the public, who own the airwaves. We are a non-profit, non-commerical, 10 watt station with a mission to train local citizens in the art of radio broadcasting and the rights and responsibilities inherent to free speech. Our lawyers have advised us that since the FCC has not defined what "authority to operate" is, we can define it as community support. Since we webcast, you are our community too!

The "authority to operate" is the license from the FCC. Until you have that, you have no authority to operate--you're a pirate. The airwaves are sparse and that's why they have to be regulated. You may not like the way they're regulated or not regulated, but it's still the law.

And because you're a pirate, you are ineligible to get an LPFM license--and considering that Vermont is an area that *didn't* lose its LPFM frequencies in the argument with the NAB and NPR over adjacencies, you very well could've received a legal LPFM license if you weren't waving the Jolly Roger. Congratulations, Long John Silver.

Absolutely!  Otherwise, there wouldn't be room for Clear Channel to have 5, 6,
or 7 full 100kW stations in each market!

I'm surprised to hear that when WFAN managed to get back on the air...they were running a "Best of Imus" show.

Wouldn't you think they would at least attempt to have some live programming on?

I initially thought that they were running a "best of" *because of the blackout.  Apparently the repeat was schedule already...and they did little to dump it in favor of anything live.

Thoughts?

M

-----article below---------

WFAN/New York's Drive To Get Back On The Air

WFAN PD Mark Chernoff tells R&R, "Sometimes the best laid plans - WFAN has a generator at our studio, as well as a generator at our transmitter. Sounds like we should remain on the air despite a power outage. Well, the generator at the Kaufman Astoria Studios didn't kick on, and the transmitter generator wound up needing to get a boost from our chief engineer's Volvo battery before kicking in." The Infinity Sports/Talker was ultimately able to pick up yesterday's Yankees game from Baltimore to let sister WCBS/New York cover the blackout. Chernoff continues, "While all this is going on, our power supply goes up in smoke and completely knocks out our studio. So, after a couple of hours of hard work by our engineers, we got back on the air." As of today, Chernoff says, "Our studio is still out of commission - no phone lines and only a bit of power. Our Imus show was broadcast from our transmitter site (glad it was a Best of Imus), and midday host Jody McDonald used WIP's studio in Philadelphia - thanks, Tom [WIP PD Tom Bigby]! And now it's Christopher "Mad Dog" Russo at the transmitter, talking for 5 1/2 with no guests and no calls. Anyway, everyone's healthy, we're coping with the situation, our engineers have been unbelievable, and I can't tell you how much everyone has chipped in to keep the station running. Situations like this can bring out the best or worst in people. At WFAN, it's been only the best, as everyone has chipped in! I want to thank my comrades who also helped us out, including Eric Spitz, Frank Raphael, Mark Mason and Tom.

Hi,

I have an Orban Audicy I'm not using as much as I should. It has the Digital
I/O, 52 minutes of RAM, the SMPTE card and the latest software.

Regards,

Ty Ford

Looking for the following Chicago market airchecks, unscoped - have lots to trade! I realize most of these are long shots, but that's what a want list is for, I suppose! Please email your lists and inquiries to culturanta@yahoo.com....

WDHL/MET  - 1973 through 1983
WLS "MUSIC PEOPLE" artist interviews 1970s through early 80s - complete and unscoped only
WVVX "Night People" overnight show feat. local music 1986-90
WVVX "Antidote Radio" new wave/punk show c. 1982-84
WNUR/WZRD (College)  Punk and new wave, c. 1981-86
WLUP - 1979-82
WEFM - 1979-81 - I believe the format became much more eclectic around this time period and included some of the early new wave acts - I remember hearing very old Gary Numan on this station during this time period

ANY help offered will be much appreciated. Thank you in advance!!

Lori in Chicago

Stop there. Adevertisers determine where ad money will be spent. When station reps or sellers call, if they do not offer the target deemo, they are wasting their time.

Very, very few advertisers use radio to reach 55+ consumers, whatever their income level. The main reason is a belief, backed by tons of research, that older consumers are more set in buying patterns and thus require much more advertising (repetiton) to be convinced to change. In most cases, the increase in frequency is not worth the eventual sale. So 90+ percent of ad campaigns are not targeted at 55+.

Since these decisions are made by marketers at P&G and Ford and Budweiser, there is no way individeual stasitons or groups can possibly get through at that level... in fact, demographics were probably considered in procut design.

Those who do target 55+ ususally use specialized magazines (AARP, for example) and special interest publications (like travel magazines, finance magazines, etc.) since they are efficient in reaching 55+ persons.

>
> Who cares?  Most of my contemporaries would rather pay off their credit card debt, or just pay cash and stay out of debt in the first place.  You might have a point when it comes to "the trendiest clothes", though -- I wear a business suit when I must, jeans or khakis when I can, but I stopped worrying about being trendy a long time ago.

You are an exceptional person in this group. A significant portion of Americans reaching retirement age have savings under $100,000 (think it is 90% plus) and will live on $1200 in monthly SS payments. Most retired persons have extensive credit card debt, since they use the card to finance emergencies, and then gto for years paying it down.

>
> You have something against Wal-Mart, Sears and Best Buy?  Yeah, I shop at those places.  I also spend lot of money at Home Depot, PetsMart, Office Max, Kroger, various upscale department stores, Starbucks, and even Burger King (although I prefer Sonic Drive-Ins ... I tip the carhops, something I doubt many teenagers ever do).  All those places are part of "middle America".  I have no idea where people in parts of America outside the "middle" shop.  And I don't especially care where people outside the United States shop, although I would presume they shop primarily in their home countries because of convenience.

Where you shop or how much you spend is not the issue. It is how much in dollars per person an advertiser would spend to get you to quit buying Metamucil at Wal-Mart and start getting it at Target. The conclusion by most is that changing life-long brand preference is more expensive to change than the profit on several years consumption of Metamucil, even if you use really heaping tablespoons full.

WLIT seems stuck at a 2.9 (in the recent Spring rating period.)

Jeesh...There are only a handlful of major markets that can't seem to support a mainstream AC station.  (WASH, KVIL, WLIT...)  In most cities they can be THE mass appeal station.

Anyone care to speculate?

M

HI,

I'm trying to make collection of all service-schematic-user manuals etc for available FM amplifiers (broadcast range 88-108 MHz). Any files, links and information's are welcome.

Thanks.

Joe Blow wrote:

> Analog cable looks and sounds better than digital cable.

And both look terrible compared to over-the-air DTV, which can far
exceed the quality of analog cable or analog broadcast.

As for digital cable -- as overcompressed as it typically is, it should
hardly be used as an example of what digital is capable of.

Someone raised an interesting point in another newsgroup:

> I noticed that the Clear Channel stations here in
>Ann Arbor, both of them, 100% of the commercial FM stations* in Ann
>Arbor, MI; were off the air for the entirety of the power outage.  The
>same was true for the CC FM station in Detroit that is on my pre-sets.
>This shows how little they were ready to be of public service in time of
>need.   Something that should be pointed out and recorded for license
>renewal time.
>
>*excludes public radio/college radio and a religious station.

But I don't know--Are commercial FM stations required to be prepared for
emergencies like this? One would think that they should want to be
prepared, but is it a requirement?

But (and I can't believe this hasn't been argued before....but then I've been gone
for a while)....IBOC is the WRONG way to do this, on AM or FM.

Frankly, given the way the broadcast industry has handled audio processing and
programming, it really won't make a damn bit of difference whether it;s IBOC or in
a
new service - it'll still sound like crap.  I've said for a long time now that
current owners of any broadcast operation shouldn't be permitted to apply for, let
alone be granted, a new digital license.  Of course, it may just be this concern
that
U-S broadacasters have opted for IBOC in the first place, since they already "own"
the allocation.  Less competition.

AM is dead, FM is dying, and they can have their IBOC in its dying days.  In the
end
the only broadcasting left will be the satellite-subscription services, and you'll
need to pay for that, just like everything else worth watching or listening to.

```

Calling all BCB DXers...

It's that time of year again! Another "DX season" is about to begin with the cooler days of the fall. What is a DX test, you ask? From the IRCA web page (courtesy of JD Stephens):

"A DX test is a special transmission aired by a station for the specific purpose of giving DXers a chance to log their station - something that in many cases may be very difficult or impossible to do under normal circumstances.

DX tests must be aired during what the FCC calls "experimental hours", which is between midnight and 6 am local time at the station. Also, most DX tests are scheduled for Monday mornings, because traditionally Monday mornings have been a time for many stations to do routine maintenance on their transmitters. This is good for the station, because many of them will work in a DX test during their normal testing/maintenance. This is good for the DXer, because the band is less congested at this time - thus increasing in many instances the DXers chances of hearing a station.

DX tests programs are as varied as the stations themselves. Most will include Morse code identifications and test tones (two things that really "cut through" the interference better than voice or music), and many will include some special music which will really "stick out" as something out of the ordinary. Examples of this are March music, polkas, TV & movie themes, or Christmas music played at an odd time of the year (such as in October).

There are some DX tests which are scheduled on Saturday or Sunday mornings, and, at the request of the stations, on other mornings. But, most are usually scheduled for Monday, Saturday or Sunday mornings."

And, if you know someone at an AM radio station or are personally involved at one, I'd *LOVE* to hear from you about doing a DX test! ANYONE is welcome to arrange a DX test - just please, let me know so I can get the word out to as many DXers as I can!

If you'd like to receive a weekly summary of DX tests, please let me know, via e-mail, at ircamember@ircaonline.org.  For starters, I'll plan on using the list of e-mail addresses from last DX season to send out the Summary. If you got the weekly summary last year and your address hasn't changed, rest assured that I'll be sending it to you again this season! If, however, you want to be taken off the list or your address has been changed, please be sure to contact me!

73,

Lynn.

>Our local radio station, radio free brattleboro, is currently documenting community support to show the FCC that indeed, we have the "authority to operate" as granted to us by the public, who own the airwaves....Our lawyers have advised us that since the FCC has not defined what "authority to operate" is, we can define it as community support.<

Of course.  We all know the FCC has never heard THIS argument before.

If this is an example of the legal advice you're getting, fire them and get different lawyers....ones with communications law experience, who can tell you where you really stand legally.

The concern of analog supporter is not what digital is capable of but what it invariably devolves into,  a mechanism for adding saleable minutes at the expense of audio or video fidelity.

No, there are no legal requirements for backup power.

thus the problem being identified. Just because the sales folks or ad folks
ignore this demo today only seems that they will be replaced in not too distant
future. Guess my point is follow the money.

> Very, very few advertisers use radio to reach 55+ consumers, whatever their

can not argue with this on general principal - again - follow the money - the %
of disposable $ very soon is not going to be teens but all of us old farts as
the snake continues to swallow the elephant - just my opinion and your test
obviously show I am dead wrong - but lets talk again in another 10 years and see
what the deal is then :-)

So decide which side you are arguing - think these publications are doing OK and are increasing distribution and revenue (though I may just be old)

OK - even if all us old farts are broke and deep in debt, the card companies and banks keep letting us buy, though I doubt these statistics as they apply to the present 50 to 60 age group, maybe for present 70+ folks your numbers work - what you got for the current 50 to 60 group?

Again - this may be true today, but the elephant is getting to be toward the back of that snake and that elephant has lots of disposable $ compared to a current 15 year old population. I would think that at some point ad and marketing folks would at least look at this reality. Or maybe I am just old an senile and unrealistic

Radio was useless in my area for local blackout information.

The county executive resorted to calling into the New York City Channel 4
WNBC News Center to pass info to the public. So how many folks do you think
could view his State of Emergency Message and curfew decree for Orange
County, NY ?

Weird claims.

Digital broadcasting does not affect the size, weight, or maintenance of a radio.  It may increase the price.  The digital signal is certainly is more fragile than AM.  Analog AM smoothly fades into the interference and noise - digital quits.

In fact digital may increase the weight of a battery-powered radio because of the current drain of the digital processing chips - at least in early versions.

The size of a radio is determined largely by how good you want it to sound.

With regard to your cross-posting to alt.radio.digital, not very many
people on this group are American. Most are Brits. so we don't have
the slightest idea about what you are talking. Still, it's an
interesting read, I suppose.

Typical of radio today.  Instead of providing useful information to their
audience, they're airing a rerun.  That is a crappy effort.

```

It was a `best of Imus' week; they reran the Thursday show on Friday,
evidently having grabbed the wrong one.   There's nothing to cover,

so it might as well be a BOI.  It would have been even better if
it hadn't been the same one they played the previous day.

Janice and Minko were doing a morning zoo starting at 5:30 until about
6:10 I guess and then dropped into BOI.  I guess they found the tape.

If you want live coverage of the exciting blackout, WCBS right up the
dial will satisfy you with endless drivel on that very topic.

Not, by the way, that Imus has been that great recently;  mostly the
show is stalling fishing for material, and Imus isn't thinking of any.
The fallback is calling Sid Rosenberg reprehensible, and trash talking
the upcoming fight to benefit the Ranch once again.  When you hear
either of these, it means there will be no yuks for the remainder of
the show.  Imus has been stumped.  The neurons that used to fire fire
no more.

Bernie and Lou are getting surly.  I imagine looking at job prospects.

I myself have taped almost all of Imus since 98 and probably will not
reorder another box of 120-casettes when the current one is empty.
Sorry J&R (you get a good deal there but I won't be needing them).

One of the BOI's they played at 5:50 Friday was from a 1998 show;
the difference was immediately apparent.

Also try thrift stores - they have tons of LPs for about a buck apiece (if your station still has turntables in the control room) and other chains like Tower Records, HMV if you want cassettes and CD.

Alternatively, try a truck stop. Lots of classic rock tapes and CDs for sale in some of those places. :-)

It think that I may have written "And both look terrible compared to
over-the-air DTV, which can far
exceed the quality of analog cable or analog broadcast."

And that is true ... OTA DTV looks astoundingly better than analog
cable or broadcast. Really. There is simply no quibble possible.
Of course I was referring to the situation in the United States
(or Australia) where we have HDTV, not in backward places like
Europe.

Next time you watch a ball game, tape the audio. Then, listen to it
without the video. Then tell me if you want sportscasters delivering
the news. It might be great for the comedy but my news ain't comin'
from someone named Mad Dog.

Maybe they couldn't find enough famous sports figures to interview.
"Why do you think the power failed, Mr. MVP? Probly cuz thu litz got
dark."

Yogi Berra is the only sports figure I'd trust to have the answer.

Rich

We have two of the finest all news stations in the world. Why on God's
earth would I tune to a sports station in an emergency. If I have Jock
Itch, maybe, even though I've got the Gold Bond spots nearly
memorized.

WCBS was on almost immediately. WINS took a little longer. Those are
my "crisis" stations, not one that makes "Dumb and Dumber" look
brilliant. It works extremely well in good times, but not in an
emergency.

The smartest thing they could have done was to simulcast WINS or WCBS.

How will the satellite services find the space to serve every community with the news and local information they need? Virtually every community has a relatively local station. Whether they actually provide service is another matter. Rural areas, I doubt, have repeaters, so localization can't be done that way even if the FCC allows it.

Then the repeater becomes a radio station (as cookie cutter as you could ever imagine) at a diffferent frequency.

During the recent blackout I listened to WINS. Once WINS is gone, will the satellite providers provide an identical service to me? I didn't go to CNN (though WINS carries CNN among other networks). CNN or the satellites can tell me what's happening across the country but couldn't possibly support the cost of all the local news departments (yes, they're dwindling) for every market. Who is going to tell me which subway lines are running or where there might be food. Please don't tell me wireless Internet because the cell site UPSs ran out of power a couple of hours into the blackout. No cell service. My phone switched to analog, then the dreaded "no service" message appeared.

Here the outage lasted 29 hours. Does every translator have a generator capable of that fuel duty cycle and where will the fuel be stored. Gas stations had fuel but no pumps working. As you can imagine, New York has extrememly strict rules about fuel storage and handling. I can't even bring a camp stove propane tank through a tunnel. It's a felony if you're caught, according to the NYFD. If I'm renting cell site space to Verizon I don't want a gas tank in the building. Clearly, the weren't running on natural gas.

I believe all the news services on both satellite services are pass-throughs.

I found it funny that TV stations stayed on the air with virtually no operating receivers. They were talking to themselves.

You'll find that WFAN 660 (Imus) had the best live coverage of 9/11 by far; it's even on the web.

Try
http://rhhardin.home.mindspring.com/sep11a.ra (3.9mb big) 8am hour
http://rhhardin.home.mindspring.com/sep11b.ra (3.9mb big) 9am hour
http://rhhardin.home.mindspring.com/sep12.ra (3.9mb big) 5am hour next morning

The 9 hour above is covered poorly as internet various feeds failed.

Imus replayed it all (more than captured above) on Sep 11 _2002_ and that's at
http://rhhardin5.home.mindspring.com/imuscut.sep1102.ra (4.1mb big)

The reason it's the best is that he's not trying to get something for it; he
and McCord are the finest news people ever.

The ``we-are-bringing-you-your-news'' tone of every news guy is insufferable.
Compare it to Imus.

No.  Market forces will make this happen.

>Digital broadcasting does not affect the size, weight, or maintenance of a
>radio.  It may increase the price.  The digital signal is certainly is more
>fragile than AM.  Analog AM smoothly fades into the interference and noise -
>digital quits.

Initially a digital radio will cost more.  I don't disagree with that. Digital signals may or may not be more fragile than AM.

They can certainly ride much closer to the noise floor than an AM signal can.  They don't suffer from background skip causing the carrier to flutter.  They don't put crap out of the speaker when selective fading hits --they squelch instead.  Most people would see those features as acceptable tradeoffs.

>In fact digital may increase the weight of a battery-powered radio because
>of the current drain of the digital processing chips - at least in early
>versions.

In early versions, you'd be right.  Have you looked at the size and performance of PCS phones lately?  No, they don't sound as good as analog cellular phones.   But they're close enough that nobody cares about the difference.

>The size of a radio is determined largely by how good you want it to sound.

...And the program's desirability will directly determine if anyone will bother turning this thing on in the first place.  If you want a CD of your brother in law's band, you're not going to hear it on the radio anyway.

The bottom line: just because a certain degree of performance is possible doesn't mean it is desirable by the general public.  Dare I

say it:  Mediocrity rules.  If it didn't, do you think Bill Gates
would be a multi-billionare?

The issue is not the money. It is how much ad cost per sale it will talke to
convince mature persons to change thier established and less fluid buying
patterns. So far, the bulk of advertisers have determined that the cost is

greater than the gain.
>

At the risk of redundancy, it is not about income. It is about how many
impressions an ad has to make on a consumer before they will consider trying
a brand or changing from thier present brand.
>

The difference is that these national publications are extremely cost
effcient with no spillage and can be target to travelers, hobbyists,
investors, etc. Radio is far broader.

50 to 60 is transitional. Social Security does not kick in before 62; ful
benefits are not available until age 65, the same age that Medicare
eligibility is established. However, there are many under-60 retirees who
have done 25 years in the military, some government services, etc... or have
been early retired. Most are on private or government pensions, and they are
still mature persons who have more established buying habits than the
younger adult demos.

When advertisers find the dollars at stake warrant a greater investment
based on greater returns, the ad targets will change. First, though,
manufacturers have to be sure ht9ier product targets this age via labeling,
sizes, appetite appeal, style, etc. as applicable.

Most ad dictates for anything except pure local retail come form a corporate
marketing level, not local.

Maybe you're right, maybe not. I wouldn't know, since I'm only 54. But I watch the all-news cable channels instead of MTV, and most of the commercials I see are for things that are marketed to my generation. Same goes for the radio stations I listen to and the magazines I read -- I choose the ones that meet my tastes, and they are the ones advertisers use to reach me.

I may be an Old Fart (and proud of it!), but that doesn't mean I don't still choose between McDonald's and Wendy's, or between Ford and GM, or between Coke and Pepsi. AAMOF, I recently switched from Coke Classic to Pepsi One. Needed a sugar-free alternative to the Coke I've preferred all my life, and never cared that much for Diet Coke's aftertaste. So I ignored brand loyalty and went with the product I liked better. I suppose that means I can still be swayed by advertising if I find the product itself suitable.

>Since these decisions are made by marketers at P&G and Ford and Budweiser,
>there is no way individeual stasitons or groups can possibly get through at
>that level... in fact, demographics were probably considered in procut
>design.

I never said otherwise. But the radio stations I listen to generally carry advertising that's aimed at adults, often at middle-aged and older adults rather than young ones. Advertise anything you want on a CHR station, I'll never hear it. Advertise Clearasil or The Gap on an oldies or news-talk station, you're wasting money.

>Those who do target 55+ ususally use specialized magazines (AARP, for
>example) and special interest publications (like travel magazines, finance
>magazines, etc.) since they are efficient in reaching 55+ persons.

Tell me, what ISN'T a special-interest magazine? I suppose Parade and USA Weekend qualify, but I don't know anyone who specifically subscribe to them ... they're just part of the Sunday newspaper, which the grownups subscribe to and the whole family reads. (The newspaper industry admits that newsstands account for only a small portion of total sales.) Life and Look magazines are long gone. Reader's Digest doesn't appeal to kids nearly as much as it does to Old Farts. TV

Guide might qualify as a mass-appeal magazine, I suppose. People magazine may have started as a mass-appeal magazine, but these day's it's just a classier version of the gossip magazines and it appeals to much the same audience.

I subscribe to a couple dozen different magazines, and I suppose every one of them qualifies as special-interest. That includes AARP Magazine, of course. But it also includes three motorcycle magazines I get, six computer magazines, two veterans' organization magazines and two financial magazines. Sorry, I quit reading Rolling Stone years ago and I never cared for Spin. (But I do pick up several guitar- and bass-oriented magazines on newsstands, since I'm thinking about buying a new instrument or two.)

>You are an exceptional person in this group. A significant portion of
>Americans reaching retirement age have savings under $100,000 (think it is
>90% plus) and will live on $1200 in monthly SS payments.

Incorrect. reread your own statement. Hardly anyone reaching retirement age is receiving Social Security payments; it's those who have actually reached the minimum age and who have also chosen to retire (or those who are old enough to continue working while simultaneously receiving SS) who receive Social Security benefits. (And a few people like me receive Social Security Disability Income benefits, but that's not the same as the retirement benefit.)

>Most retired
>persons have extensive credit card debt, since they use the card to finance
>emergencies, and then gto for years paying it down.

Not the retirees I know. They pay off their cards every month, and have ever since they figured out how much of their debt was due to interest and other charges.

And Metamucil itself is only a tiny part of the issue, since as I have pointed out I buy a lot of the same things that younger adults do. (Actually, in my case it's Fibercon these days; I switched from Metamucil a few years ago. I also switched from Kmart to Wal-Mart for most of my "mart" shopping, and most recently began shopping at Target also. Why Target? Because it's near several other stores where I shop -- Radio Shack, Office Max, CD Warehouse, Goody's (the clothing chain, not Sam Goody), Kroger supermarkets, and several restaurants of both the fast-foot and "regular" variety. (But now there's a new Starbucks across the street from the Wal-Mart Supercenter, so I still go in that direction quite a bit.)

Perhaps when you're older you'll understand that a lot of advertisers do recognize the economic clout of the Baby Boom generation and target us through our "specialized" media.

> Anyone care to speculate?

The station's been hurting ever since Mark Edwards was forced out as PD.  Granted, the ratings slippage started while he was still there, he may not have reacted to changes as fast as he needed (nobody expected WNND to come out of nowhere with a more up tempo sound) and he might not have survived Clear Channel taking the station over, but for a long time he was running a great-sounding AC station.

The station seems to be like a yo-yo--going upward in the fourth quarter when they do the all-Christmas music format (which knocked WNND into their so-far unsuccessful 80s-90s oldies format) and then dropping back down after the holidays.

Meanwhile, WTMX seems to have become *the* AC station in town, even though they're modern instead of mainstream.  Eric and Kathy rule in female demos in the morning and it seems like Barry James correctly anticipated back in 1994 that the target audience didn't want to hear Mariah and Rod Stewart anymore and wanted to hear more current music. It's also been helped by XRT skewing older in its music selection, the competition for the less adventurous of the XRT audience by the Drive and both Q101 and the Zone turning into boys' clubs musically and demo-wise, like most modern stations (despite those two morning drive ditzes on the Zone Brooke Hunter and Jill Egan).

John Gehron, the boss at CC Chicago who is one of the best radio minds in the biz, has been spending most of his time trying to make KISS competitive with B96 (since WNUA runs itself, 'LIT gets good numbers some of the time and Marv Dyson and Elroy Smith have autonomy over at WGCI and V103).  Sooner or later, he's going to have to do something serious with the Lite.

No, you mean advertising by the broadcasters will produce expectations in the minds of the consumers that digital = better, which will lead to the highly suggestible general public believing these claims whether they're true or not (certainly untrue if you take the UK's experience), this advertising creates demand, which allows manufacturing batch sizes to increase which leads to lower prices, which goes on until the prices are low and demand carries on going up as the prices fall.

This isn't market forces, this is manipulation of the market by broadcasters and consumer electronics companies to ship new products to make extra profit.

> about the difference.

That's mobile phones, not broadcast quality audio. Who gives a shit about the absolute audio quality of a mobile phone call so long as it is intelligible? This is very different for broadcast quality audio. And BTW, I'm not supporting analogue AM because in the UK analogue AM is shite.

> The bottom line: just because a certain degree of performance is
> possible doesn't mean it is desirable by the general public.

The bottom line is that the broadcasters are abusing their relationship with their listeners in that their listeners trust them to provide as good a service as they think is possible, when in reality in the UK we have sub-FM audio quality on DAB when there is spare capacity on nearly all DAB multiplexes left unused and going to waste, but the broadcasters just don't want to increase the bit rates to improve the audio quality (96% of stereo radio stations on DAB in the UK use 128kbps MPEG Layer 2, and Layer 2 was supposed to be used at 192kbps for stereo audio streams).

The bottom line is that CD-quality on the radio is possible, and given the choice between CD-quality or lower quality then the general public would not turn down CD-quality.

But again the reality is so far away from CD-quality it is just a bad joke. On DAB in the UK the audio quality is sub-FM, yet we hear adverts day in day out saying crap like "superb digital quality sound" and such like. This is an abuse of trust and the broadcasters should be ashamed of themselves that they're conning the general public to earn extra profit (for the commercial radio groups) or to try to hang on to market share and be seen to be more politically correct (for the BBC).

> Dare I say it:  Mediocrity rules.

You've just said it.

> If it didn't, do you think Bill Gates
> would be a multi-billionare?

So basically because companies can get away with mediorcity then that should be accepted and applauded?

Basically this is all to make a very small number of people a lot richer, while the masses have to put up with crap audio quality passed off as entertainment.

The bottom line is that we'll all be dead one day and the only actual trade-off going on is people's enjoyment against fking profit for a very small number of people.

But hey, that's capitalism for ya.

Think Enron and Worldcom.

And it seems one of the main purveyors of medicority in the US is getting a
bit of a backlash isn't it? Or are the reports about Clear Channel and a
load of unhappy listeners just bullshit?

The Northeast power outage hit my colo facility hard (my servers are
housed at an ISP in Cleveland), but it looks like we're up and running.

I moderate RRB through a news server in upstate New York which also may
have been affected, and posting is going a little slower than usual, but
the posts do seem to be getting through.

Let me know if y'all see any weird stuff happening or do not see your posts coming through.

FM stations have never been known for news. If you want to know if Eminem wears boxers or briefs, go there. It's "lifestyle" stuff. Doesn't your market have a full service AM? Or, at least, an AM that's known for its news? FMs treat news as the plague. You can't, suddenly, expect them to put together a full news staff qualified to report on an emergency of this magnitude.

A top story for an FM might be when socialite Lizzie Grubman ran over a group of people in a hissy fit at a trendy night club. Wars. Blackouts. Who needs it? That's for old people.

Now where did I put my MP3 player?

Rich

Dear David,

For good radio reception there is no substitute for a decent wire antenna, and a lead in from the antenna to your radio [we'll get to how you connect it to the radio] AND a GOOD EARTH CONNECTION.

The best receive antenna is as high as possible, and as long as possible with the wire running in the general direction of the station(s) you want to hear. [this is not always possible]

Amateur Operators use tuned antennas to resonate on the frequency band they are using, and it's true a resonant antenna works well as a receive antenna.

But on the AM Broadcast band a resonant antenna is difficult to construct. So whatever you do is going to be a compromise.

A DX er constructs a loop antenna with a number of turns of wire on a frame which may be 1 m square and uses it to null out interfering stations and pull in the desired station using a high gain communications receiver.

An AM radio listener can do well with a long wire if you can get it up off the ground  and 10 m or 20 m is better then nothing.

If you want to get pedantic you need some sort of matching device between the aerial and the coax you will use to run the signal into the house and onto your radio. Measuring the feed point impedance of a random length of wire involves a lot of theory a lot of messing around, and won't make any difference you will notice so a good soldered connection between the centre wire [thats center to you] and the aerial wire is all you need.

At the other end you need to have a good earth connection.

DO NOT RELY ON THE MAINS EARTH.

The kind of connection that electricians make is OK for appliance safety [well it's supposed to be] but it's likely to carry a lot of AM Band interference induced from every kind of source connected to the mains.

A copper pipe about 1 m long buried in the ground with a well connected copper wire soldered to it which runs into your radio and connects to the "earth" connection will pull the noise and hash down considerably.

If your radio does not have an "Earth" connection and you can't get into it to hook onto the frame [the headphone socket frame is radio earth]  you can wind a coil with insulated copper wire on a suitable former. I used to use the centre from a toilet roll, wind on 30 - 50 turns depending what wire I could get, and connect this between the aerial wire and the earth wire, then drape the coil across the top/back of the radio where the ferrite antenna is. The arrangement is a simple transformer, which delivers the signal from the aerial into the radio.

If you live on a farm you can run wire quite a long way, but most people live in city spaces that run to 1/2 acre at best just don't have a lot of space to put up wire antennas.

Vertical antennas are difficult because wherever you live there will be rules limiting the height of anything you put up and the higher you go the more engineering stuff you have to be involved with.

Mothers are a limiting factor. Either your mother or the Mother of your children will object to large unstable looking structures. [long before the local body engineer]. Neighbours get fussy too, whatever you do make sure you don't upset anyone.  Ask first. Watch out for power lines, phone lines, Cables of any sort.

If you are interested in Amateur Radio track down the local amateur radio club. The club will have members who will share information ideas, and show you their inventions. They may have classes you can attend.

The local library will have books with diagrams which will help you, and you can spend hours on the internet searching aerial, antenna, dipole, long wire, and beverage antenna. You won't have the space for a real long wire or a beverage antenna [ unless you are Very Lucky]  but you need to look at the theory of how they work.

Good Luck..

Regards

Robert

www.xmradio.com

XM has the Delphi unit that works in your home/car/office etc. They also have a PCMCIA card for your computer.

Sirius (www.sirius.com) also has a "Plug-n-Play" unit, but I don't hear very nice things about it.

I've personally experienced both Sirius and XM programming (I have an XM unit in my 2001 Ford F150).
While I prefer the audio quality of Sirius, I prefer the content variety on XM. I suggest spending an afternoon at Best Buy and making a judgement call.

The other thing to consider would be the longevity of the broadcaster. It's been suggested that Sirius is on some fairly shaky financial ground. XM seems to have the better shot at actually "making it" in this economy. Since the radio units aren't cross compatible, you'd be SOL if you'd purchased a Sirius compatible radio and then Sirius went the way of DrKoop.com.

Just my two cents,

Jeremy Powell

> So, is there (or not) satellite radio for the home?

Sure. http://www.xmradio.com/skyfi/ has info on a Delphi unit that works with XM and http://www.siriusradio.com/servlet/ContentServer?pagename=Sirius/CachedPage&c=Page&cid=1019257316821 has the same for Sirius. Of course most of the hardware is sold through dealers so check out Best Buy, Circuit City or any other in your area.

BTW, if you're looking for an alternate to local stations check out your cable TV or satellite TV provider. They often have a bunch of audio channels. You may already have what you're looking for.

I recently bought this clock:

http://store.yahoo.com/atomictime/attimsildigw.html

for use in a radio studio. We're going to do a fancier timekeeping solution after our studio move next year but for now this is good enough.

Well, it would be if it worked. The clock synchronizes with WWVB every night, and I had it working on my engineering bench. But with it mounted on my air studio wall, it won't sync. I've tried three different positions -- mounted flat on west, north and east walls. In each position, I left it there for about a week to see if it would sync.

I'm in Atlanta, so WWVB is generally west from me. I don't know how the internal antenna element is oriented, but I assume it's parallel to the big flat dimension of the clock, so either east or west should have worked best. Obviously the building is attenuating the signal, but I really want it to work in that room, so I've got to find a way to improve the signal reception without moving the clock much from where it's at.

So, does anyone have any experience with opening these clocks up and adding an antenna? What kind of antenna should I use, and how should I orient it?

I have a GE clock that is very good.  It is also using WWV.  These clocks generally scan the base frequencies and lock in on the best of them.

Your problem is that in your studio, the unit is not seeing the signal, which I realize is also your conclusion.   It is possible to open the radio, and add on an antenna wire of some sort.  If the signal is not present in your location, all you will add is noise in to its front end.

You would have to work out the front end circuit of the clock receiver, to determine the best place to pick off to put a piece of wire to act as a simple antenna. The only drawback is that soldering to the circuit, you may also detune it a bit because of the stray capacitance of the added antenna wire, and also the soldering itself. There is no added RF input amplifier stage to offer isolation to the front end for any external antenna connection.

It would be recommended in any case to put a capacitor of about 47 pF in series with the added wire at the antenna solder point. This is to give DC isolation. The 47 pF will easily pass frequencies from 5 mHz to 20 mHz which is the scanning range of these clocks.

The front end of these clocks are using MosFet devices. If there is any static electricity, this can cause damage. Care must be taken to not touch the bare end of the wire with the fingers. Use insulated wire only. A small gauge of about AWG 22 to AWG 26 stranded wire should be adequate. A length of about 6 to 10 feet should be okay.

If all of this detunes the front end due to having no input isolation, then the reception will infact be worsened.

If you want something very good. Leitch, and Torpey Time make professional clock systems that are designed to work from GPS. There are a number of other companies that also make these. You put up a small antenna about the size of a large donut in an area where it can see the sky. There is a 52 ohm foam coax cable that runs back to the clock receiver. The receiver has a digital packet output to run studio type clocks. The output time accuracy is in the parts per trillion. As a starter you need the receiver, antenna, cable, and 1 clock display module.

At the TV station, we are using the Torpey system for our precision time keeping. This one is excellent.

Check out:
http://www.oakwoodbroadcast.com/Clocks_Timers/Torpey/torpey_gps1.html

Hi Ken...added your station to my presets.  Listening to Harry Harrison at WMCA right now.  Question...can you add the year?  Having the day of month without the year is annoying.

Thanks for putting this together....Good Luck.

Hi Ken...added your station to my presets.  Listening to Harry Harrison at WMCA right now.  Question...can you add the year?  Having the day of month without the year is annoying.

Thanks for putting this together....Good Luck.

There are some hints at the NIST website.  I live in Florida and the nighttime signal is much better than the daytime signal.  This is also true for Atlanta, but not as much variation as at my location.  One thing that helps (sometimes) is to move the clock away from TV receivers and monitors. A 60 kHz antenna is a large beast, so there is nothing simple that you can do in that department.

You may have a RFI problem. The 60KHz signal is pretty weak compared to a lot of the signals floating around in the average civilized office. Light dimmers, flourescent lights, CRT's, switching-mode power supplies all put out lots of RF in that part of the spectrum. Your best bet might be to just receive WWV on a SW radio and use it to set your clocks. Low-tech but usually works, unless propagation is just shot.

>
> Well, it would be if it worked. The clock synchronizes with WWVB every night, and I had it working on my engineering bench. But with it mounted on my air studio wall, it won't sync. I've tried three different positions -- mounted flat on west, north and east walls. In each position, I left it there for about a week to see if it would sync.
>
> I'm in Atlanta, so WWVB is generally west from me. I don't know how the internal antenna element is oriented, but I assume it's parallel to the big flat dimension of the clock, so either east or west should have worked best. Obviously the building is attenuating the signal, but I really want it to work in that room, so I've got to find a way to improve the signal reception without moving the clock much from where it's at.
>
> So, does anyone have any experience with opening these clocks up and adding an antenna? What kind of antenna should I use, and how should I orient it?

Robert,

LPB took over the Omni-Tronix range.

We supply these but here's the company site;

http://www.lpbinc.com/

You've got Continental:

http://www.contelec.com/

I think these boys are a little to high power for you:

http://www.riz.hr/salest.htm#t1

There are others but you woulldn't like the prices and they mainly cater to the goverment or bible broadcasters (God will provide).

How the hell did you get a SW licence?

Mr. SFBobby:
Thank you for listening. The cut in question is from 1968. HH was migrating to WABC so this was his last WMCA b'cast. Seems like 1968 wasn't all pothead music.

I apologize for not catching it earlier. It is still in transition so there are plenty of faux pas. It went on a few days ago and the silly software from live365 will not automatically fill in date/time and the guess feature won't fill all information in.

I will always insert call letters, announcer when possible, and month/day/year or as much as possible.
Thank you for bringing this to my attention and keep listening.
Ken

I worked at WMMW 1470 AM Radio in Meriden, Connecticut for a while after
I got out of school as a DJ - Announcer. It was a 1,000 watt day time
station when I worked there. I would always tell people that WMMW stood
for We Make Meriden Wonderful. Thanks and Take Care, From, Tom Coss,
Meriden,CT.

Hello List,
anyone have a manual, or schematic for the RCA BW-11A Frequency
Monitor. Trying to bring one back to usable life. Thanks

Amateur Radio Newsline=E2=84=A2 Report 1355  =E2=80=93 August 1 2003

-------------------------------------------------------------------------=
-
----------------------------------------------

A NOTE TO THOSE WHO ONLY =E2=80=9CREAD=E2=80=9D AMATEUR RADIO NEWSLINE(tm=
)

For those of you who only know of the Amateur Radio Newsline (tm) as a te=
xt
newsletter we would like to invite you to listen to the audio version.  T=
his
Amateur Radio Newsline (tm) script is actually written for the =E2=80=9Cs=

poken
word.=E2=80=9D  It is recorded each by professional broadcasters and is a=
vailable for
private listening or rebroadcast over your repeater.  Two methods of deli=
very
are available: FTP MP3 or dial-in telephone.  Please visit our website at
http://www.arnewsline.org for a list of telephone numbers (you have to pa=
y your
own long distance charges) and links to our voice newscast.  On site free=
 FTP
Downloads are available at our site by clicking on the newscast number at=
 the
top of the page.

The Newsline Production Team

--------------------------------------------------------------------------=
-
----------------------------------------------

Amateur Radio Newsline report number 1355 with a release date of Friday, =
August
1 2003 to follow in 5-4-3-2-1.  =20
=20
The following is a Q-S-T.  Amateur Radio helps solve a murder by tracking=
 down
one of its own.  Get to know about the ham radio heroes involved in the h=
unt
for a cop killer on Amateur Radio Newsline report number 1355 coming your=
 way
right now.

(Billboard Cart Here)=20
=20
**

ENFORCEMENT OF A DIFFERENT KIND:  AMATEUR RADIO HELPS HUNT HAM WHO KILLED
MICHIGAN COP

Hams in Michigan were called on to help track down a cop killer after wha=
t
should have been a routine arrest became a grusome homicide scene.  It ha=
ppened
on July 6th.  Amateur Radio Newsline=E2=80=99s David Black, KB4KCH, is he=
re with the
rest of the story:

--

Never in Michigan's ham radio history has there been a case like Scott

Woodring's. It began July 6th. That's when Woodring, KC8JNG, a member of =
the
Christian Identity movement and described as a survivalist, shot and kill=
ed a
Michigan state police officer. It happened while Woodring was being arres=
ted
for solicitation of a minor.=20

A stand-off ensues and lasts nearly a day. During a law enforcement shift
change, Woodring manages to escape, triggering an extensive manhunt throu=
ghout
western lower Michigan. That's when ham radio operators became involved, =
since
it was suspected that Woodring had been using amateur radio equipment to
communicate with other members of his group.=20

James Wades, WB8SIW, is Michigan's RACES Officer and Section Emergency
Coordinator:=20

--

Wades: =E2=80=9CI directed the EC for Newago Co. to establish an intercep=
t peratio in
the area and monitor seldom used frequencies in and about he VHF 2 meter =
band.=20
And, additionally, we sent out a broadcast nouncemnt to selected areas to
selected area RACES members thrughout Michigan, essentially asking them t=
o
listen for conversations between Mr. Wodring and whomever else he might s=
peak
with.=E2=80=9D

--

That paid off. A ham in Holton, Michigan reported monitoring Woodring and
another operator talking on the air. The intercept was reported to state =
police
they then asked government agencies including the FCC to provide directio=
n
finding assistance to find Woodring. But it was a Friday night and police
couldn't get any response from the federal agencies. So Wades says=20
investigators turned to radio amateurs for help:=20

--

Wades:  =E2=80=9CWe deployed amateur radio teams from several counties in=
 the area,
and had pretty much a continuous radio direction finding occurring throug=
hout
the weekend, with teams from from Kent, Ottawa and Musquogen Counties.  W=
e also
had teams on standby in Kalamazoo County as well as the Civil Air Patrol =
team

```
=E2=80=93 which weren=E2=80=99t utilized, but it was reassuring to know  =
that they were
there=E2=80=9D

--

Hams and the police knew the general area where Woodring was believed to =
be
hiding. Wades says it was an eyewitness who ultimately led to Woodring be=
ing
found:=20

--

Wades: =E2=80=9CMr. Woodring was discovered through a tip from a citizen =
who saw him
essentially taking shelter in a non working vehicle.  When Michigan state
police officers approached, he leveled an assault rifle at them and he wa=
s
subsequently shot to death when he refused t comply with orders or lower =
the
rifle.=E2=80=9D

--

Wades says police were hesitant at first to work with radio amateurs. But=
 he
says the hams' efforts made a powerful and positive impact with law enfor=
cement
agencies.=20

--

Wades:  =E2=80=9CWhen all was said and done the feedback has been increda=
bally
positive.  Tremendously good comments about the professionalism and the s=
kills
of the radio amateurs involved. And basically I think that they were some=
what
=E2=80=93 almost shocked at the capabilities and the skill level of our A=
RES and
RACES members in Michigan, which, of course was highly complimentary=E2=80=
=9D

--

Around 40 radio amateurs took part in the effort to help find Woodring. W=
ades
says the hams involved coordinated their work with police carefully, even
establishing a dress code for hams reporting on scene with investigators.=
 The
professionalism Michigan hams showed has given law officers a new appreci=
ation
```

for the kind of help radio amateurs can provide when it's needed.=20

>From Birmingham Alabama, I=E2=80=99m avid Black, KB4KCH, reporting for th=
e Amateur
Radio Newsline.=20

--

In all, RACES members provided 494 staff-hours to the man hunt. Most of t=
his
was contributed during the 36-hour period when radio direction finding
activites to locate Woodring were being conducted.  (ARNewsline(tm) from =
lead
provided at www.qrz.com)

**

THE FIGHT FOR OUR SPECTRUM:  HAM RADO VS. BPL

If you think that the term Broadband Over Powerlines and its acronym BPL =
will
never afect you, guess again.  BPL could effectively spell and end to ham=
 radio
as we know it.  This, if it is ever approved by the FCC and popularized a=
cross
our nation.

Just how real is the chalange to the survival of the Amateur Radio Servic=
e?=20
ARRL Southwestern Division Director Art Goddard, W6XD, gave some graphic
details at last weeks Fort Tuthill Hamfest in Arizona based on test data
collected by Ed Hare, W1RFI, of the ARRL Lab:

--

Goddard: =E2=80=9CIf you are an engineer, anywhere from 33 to 63 decibels=
 increase in
the noise level thatr you will see at your reciever due to BPL run in the=
 power
lines in your neighborhod.  If you are into S-Meter readings, thats somew=
here
between an S-6 and 10 over S-9.=E2=80=9D

--

For those unaware, Broadband over Powerlines is a scheme to give consumer=
s and
businesses high speed Internet connections using the existing power
distribution grid.  This would put the power providers in the position of=
 also
being broadband internet providers as well.  The problem is that powerlin=
es are
not shielded.  They will act as much like giant antennas as they will a c=

losed
carrier of the broadband connection.  In other words, whatever is on the =
power
lines will be radiated and heard by your ham band reciever.  And Art Godd=
ard
says that the Broadband Over Powerline signals will occupy the spectrum f=
rom 2
through 80 MHz, meaning every band from 75 meters through 6 meters will b=
e
affected. =20

According to Goddard, BPL has the backing of the White House which views =
the
increased use of unlicensed devices as being good for the U-S economy.  H=
e also
notes that the FCC =E2=80=93 which is supposed to be neutral and regulati=
ng in the
public interest, is =E2=80=93 in this case -- actng like cheerleaders for=
 the
proposed service. =20

Goddard says that this is an issue that the ARRL is keeping a very close =
eye
on.  He also indicates that the League may soon be asking ham radio opera=
tors
to lend their voice in opposition to BPL.  (ARNewsline(tm))

**

RESTRUCTURING:  NCVEC FILES TO END CW TESTING IN THE USA

The National Conference of Volunteer Examination Coordinators has filed a
Petition for Rule Making before the FCC to end Morse testing in the Unite=
d
States.  In its July 29th request, the NCVEC asks the FCC for an immediat=
e end
of CW testing of applicants. =20

The NCVEC request is based primarily on the action taken in Geneva at las=
t
months World Radiocommunications Conference.  At that time, Morse testing=
 as a
world standard was abolished, leaving it to individual nations to decide
whether or not to continue to administer CW exams.

The NCVEC petition concurs with the WRC findings.  It notes an appearance=
 that
most of today=E2=80=99s radio amateurs want to communicate using voice.  =
Because of
this, the NCVEC says that it makes no sense from a regulatory standpoint =
to
require hams to be Morse proficient when the greater majority of radio am=
ateurs

show no desire to use the mode.  The petition also notes that the future =
of the
hobby now encompasses many new modes that were undreamed of only a few sh=
ort
years ago.  It adds that while manual telegraphy is a noble part of Amate=
ur
Radio=E2=80=99s past, it is no longer the services prime emission mode.=20

The NCVEC approach will still requires all applicants for an Amateur Serv=
ice
license or upgrade to pass the current written exams.  Only Morse testing=
 would
be eliminated. =20

As we go to air no Rule Making designation has been assigned to this requ=
est by
the FCC.  The full text of the petition can be found on our website at
www.arnewsline.org  (ARNewsline(tm) from NCVEC release)

**

HAM RADIO TESTING:  QPC RECALLS QUESTION

Also from the National Conference of Volunteer Examiners Coordinators wor=
d that
its Question Pool Committee of has withdrawn question T5B04 from the Elem=
ent 2
Question Pool.  This,  effective July 27th.  This question is withdrawn d=
ue to
the changes in Part 97 of the Amateur Service rules dealing with the new =
60
Meter amateur allocation.  (NCVEC)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, hea=
rd on
bulletin stations around the world including the WR9ARC repeater of the
Riverland Amateur Radio Club serving La Crosse, Wisconsin.

(5 sec pause here)

**

HAM SPECTRUM: ARRL & CQ PRESENTS A PRIMER ON 5 MHZ

And speaking about 60 meters, want to know just about everything there is=
 to
know about how to operate legally in this new 5 MHz spot frequencies?  Wa=

lk,
run or drive to your news stand and buy a copy of the August issues of bo=
th QST
and CQ Magazines.  Then go home, settle down and read the articles titled=
 60
Meters Frequently Asked Questions by Rick Lindquist N1RL and Ed Hare W1RF=
I in
QST and Getting Ready For 60 by Gordon West, WB6NOA.  Both are a wealth o=
f
information on how to approach this rather specialized allocation and han=
dily
compliment one another.  We asked Gordo to explain what readers will find=
 in
his:

--

West: =E2=80=9COne of the things that my CQ Magazine article talked about=
 was the
Amateur frequencies And tuning in.  There was allot of confusion about wh=
at
exact frequency one uses for upper sideband on the 60 meter band. As long=
 as
everybody remembers that 60 meters =E2=80=93 5 MHz =E2=80=93 point 5 --  =
all of the upper
sideband frequencies end with point 5.=E2=80=9D

--

And why did her write the article?

--

West:  =E2=80=9CWhen I first heard about the band it immediately came to =
mind as
channelized operation that many new hams are not used to.  Well, growing =
up on
10 meter FM as well as 6 meter FM,  I knew what channelized operation was=
 all
about.  And the key word is =E2=80=9Csharing.=E2=80=9D  There=E2=80=99s n=
o QSY'ing =E2=80=93 at least
not easily on the 60 meter band beyond the 5 channels, so its going to be=
 up to
all hams to sort of take turns in using this exciting 60 meter =E2=80=93 =
5 MHz
band.=E2=80=9D

--

Where Gordon takes the story telling approach, Lindquist and Hare present=
 their
material in pure Question and Answer form.  A style of writing that compu=
ter

enthusiasts call a FAQ.  That=E2=80=99s an acronym  for the words =E2=80=9C=
Frequently Asked
Questions=E2=80=9D  and the answers that they provide is fact filled, pre=
cise and
right to the point.

Taken together, =E2=80=9C60 Meters Frequently Asked Questions=E2=80=9D an=
d =E2=80=9CGetting Ready
for 60=E2=80=9D are the most complete operating guide for the 5 MHz band =
penned to
date.  Hams contemplating operation on the five channels that make up the=
 60
meter allocation would be well advised to read both  before hitting the
transmit switch.

For more information about subscribing to CQ, visit www.cq-amateur-radio =
on the
world wide web.  You can join the ARRL, support its work and begin receiv=
ing
QST by signing up at www.arrl.org.  (ARNewsline(tm))

**

## THE WAR ON TERROR:  TWO HAMS KILLED IN IRAQ

Two recent casualties of the war in Iraq were amateur radio operators, on=
e
American and one from Sri Lanka.  The ARRL Letter reports that Specialist=
 Jon
Fettig, KCZ0HSQ, of Dickinson, North Dakota, was killed in an ambush on J=
uly
22nd.=20

The following day, Nadisha Yassari Ranmuthu, 4S7NR, an International Red =
Cross
aid worker, was killed and his Iraqi driver was wounded after their vehic=
le,
marked with the Red Cross emblem, came under fire south of Baghdad.   Ran=
muthu
was 37 and well-known in the Sri Lankin ham radio community.  (ARRL)

**

## ENFORCEMENT:  HAM TOLD HE MUST RESPOND TO FCC QUERRY

A California ham has been told that he had better respond to an earlier F=
CC
letter to him regarding a pair of uncoordinated repeaters that he alleged=
ly
operates.  Otherwise it could cost him his ham ticket. The agency=E2=80=99=
s Daryl
Duckworth, NN0W, explains:

--

Duckworth:  =E2=80=9CThe Enforcement Bureau has sent a warning letter to =
WA6SEK,
Thomas De Lasaux, of Stockton California, concerning uncoordinated repeat=
ers on
224.660 Mhz and 441.275 Mhz.  There has been no response to a letter of M=
ay 5th
where he had 20 days to reply.  He is being afforded an additional 20 day=
s to
respond.=E2=80=9D

--

According to Duckwoth, if there was no resolution by July 25th, the agenc=
y
planned to initiate enforcement action against WA6SEK=E2=80=99s Amateur S=
ervice
license.  Its now past that date and we are awaiting word from the FCC as=
 to
wheter or not De Lasaux has filed the required reply.  (FCC, RAIN)

**

## ENFORCEMENT:  TRUCKING COMPANY WARNED ABOUT UNLICENSED 10 METER OPERATION

Also receiving a letter from the FCC is the Tidewater Transit Company, In=
c. of
Kinston, North Carolina.  This one warns the company to stop using the 10=
 meter
ham band for its communications or face some rather severe consequences.

In his letter to Tidewather, the FCC=E2=80=99s Riley Hollingsworth notes =
that
information before the Commission indicates that a 2002 Volvo truck belon=
ging
to Tidewater and bearing North Carolina license plate LK 4130, was the so=
urce
of radio transmissions on the Ten Meter Amateur Radio band on July 8th.  =
This
while it was driving on Interstate 20 near the city of Lexington, South
Carolina.

The Letter warned Tidewater that continued unlicensed operation could bri=
ng
with it a fine of up to $10,000.  The owners of Tidewater Transit were al=
so
instructed to contact Hollingsworth to discuss the matter with him.  (FCC=
)

**

## RESCUE RADIO:  HAMS TO THE RESCUE AS CELL PHONES FAIL

Interlinked emergency repeaters played a key role in providing communicat=
ions
during the recent Arizona wildfires.  =20

As learned at last weekends Ft. Tuthill Hamfest, radio amateurs in Navajo
County set up repeater links to allow contact between the Red Cross
communications center and a number of evacuation sites.  This, after it w=
as
found that cellular telephone coverage across the area was inadaquite.=20
=20
The hams stepped in when the walkie-talkie feature of the cellular teleph=
ones
failed to operate as advertised.  The reason appears to have been the sma=
ll
number of relay sites available in the isolated areas where the fires wer=
e
burning. =20

The hastilly assembled Amateur Radio relay system along with existing hig=
h
level Amateur service repeaters are reported to have performed flawlessly=
.=20
This made possible an ongoing exchange of vital evacuation information.=20
(ARNewsline (tm) from information gathered at Ft. Tuthill Hamfest)

**

## RESCUE RADIO:  E-911 KIND OF ON HOLD

A lack of funding from cash-strapped state and local governments appears =
to be
slowing the rollout of enhanced 911 services.  And in some areas it has p=
ut the
new wireless emergency phone location service on what appears to be an
indefinite hold.

--
Under FCC regulations, wireless companies were required to respond to 911
center requests within six months by providing technology that can locate=
 any
individual on a given wireless phone networks who is using a phone equipp=
ed to
gather information from the global positioning satellite system.  This
technology lets emergency operators locate cell phone users in need of
assistance, but only one in ten  emergency call centers has access to it.=
=20

But John Melcher, who is the president of the National Emergency Number
Association says that moneys earmarked for Enhanced 911 are being spent o=
n

other needs.  In a recent press statement Melcher charged that some state=
s have
diverted millions of dollars=20
in Enhanced 911 funds collected from consumers and have used the money to
subsidize budget shortfalls.  This says Melcher puts the public in danger=
,
adding that moneys earmarked on customer billing for Enhanced 911 service=
s
should be spent only on Enhanced 911 and nothing else.

For the Amateur Radio Newsline, I=E2=80=99m Bruce Tennant, K6PZW, in Los =
Angeles.

--

The FCC set specific deadlines for implementing this new service back in =
1966.=20
To date, many providers have yet to meet that implementation goal.  (Publ=
ished
news reports)

**

## RESCUE RADIO:  THE INTERNATIONAL AREN NET

Still with rescue radio and emergency communications news, word that the =
Irish
Amateur Radio Emergency Network takes to the air for its regularly schedu=
led
drill session the first Tuesday of each month.  The net is at 21:45 local
Ireland time.  Thats  pretty close to UTC, with the net operating on 7 po=
int
043 Mhz on SSB.  (Q-News)

**

## BREAK 2

This is ham radio news for today=E2=80=99s radio amateur.  From the Unite=
d States of
America, We are the Amateur Radio Newsline with links to the world from o=
ur
only official website at www.arnewsline.org and being relayed by the volu=
nteer
services of the following radio amateur:

(5 sec pause here)

**

## EMERGING TECHNOLOGY:  WI-FI SPEED INCREASED 4X

The most widely used wireless local area network protocol, IEEE Standard
802.11, also known as Wi-Fi, was extended last month to make it four time=
s
faster.  The CGC Communicator reports that the new standard, IEEE 802.11g
transmits data at up to 54 Megabits per second.  Thats up from 11 megabyt=
es per
second as was called for in Wi-Fi standard 802.11b.  (CGC Communicator)

(DO NOT READ:  CGC)

**

## INTERNATIONAL - ASIA: NON HAMS INVADING THE 7, 10 AND 14 MHz HANDS

The increasing use of more frequencies on various ham radio bands by the=20
Indonesians and other South East Asian non amateurs for their personal or
business traffic, is becoming a very serious problem.  Q-News reports tha=
t the
Indonesians are using the lower 40 kHz of 40 meters, and  frequencies aro=
und 14
point 100 MHz in the 20 Meter band most of the time. =20

Nor have they spared the 10 MHz allocation.  There unlicensed oprators ar=
e
regularly heard in the  10.0 to 10.1 MHz segment which primarily carries
international air traffic control communications.=20

Q-News notes that this is a very serious situation.  One which could enda=
nger
the lives and safety of air travelers in ITU Region 3 and a situation tha=
t
needs to be to be dealt with quickly at the highest levels of internation=
al
diplomacy.  (Q-News)

**=20

## INTERNATIONAL - UK:  BBC HELPS THE BLIND

The British Broadcasting Company is playing a crucial role in developing =
new
radio equipment that could help increase number of visually-impaired peop=
le
working at the organization.  Across the UK, BBC local radio stations are
converrting from analog to digital equipment. The digital equipment is de=
signed
to make life easy for full-sighted broadcast journalists, using a visual
touch-screen system, which is why it needs to be adapted for visually-imp=
aired
people. =20

Now comes word that Claire Jennings, who is the the BBC=E2=80=99s Disabil=

ity Advisor
for Technology, has been working alongside technology company Calrec.  Th=
is, to
design a digital radio broadcast mixing console that is user-friendly for
visually-impaired radio producers =20

The BBC has spent the past few months working with Calrec to adapt the
broadcast desk and with BBC Technology to extend the touch-screen control
system so that it can convert text into speech and be controlled using a
standard keyboard.  As well as controlling sources to faders on the Calre=
c, the
BBC system  can control most other hardware in a similar manner.

The entire story may be found in cyberspace
www.bbctechnology.com/newsarchive4.htm.  (Media Network)

**

## SPACE:  NASA TEAMS WITH LOCAL LIBRARIES TO DELIVER -- SPACE

NASA and the American Library Association have partnered to create a
one-of-a-kind interactive space research exhibit.  This, as part of a new
program called NASA @ your library.=20

The unique exhibit will tour 120 public libraries in five regions across =
the
nation for the next two years.  It will feature special presentations
specifically created to expose people of all ages to NASA research in the=
 areas
of health, home and transportation, agriculture and environment, and comm=
erce.=20

The program was recently launched at the Enoch Pratt Free Library in Balt=
imore.
 NASA @ your library was created to inspire more participation at public

## CONTEST CALENDAR:  FISTS C2C IN SEPTEMBER

Mark September 13th and 14th on your calendar for the third outing of the
annual Fists Coast to Coast contest. This year the contest will run a ful=
l 24
hours beginning at 5 P.M. Pacific Daylight Time on September 13th and
concluding at 5 P.M. on the 14th.  That corresponds 0000 to 2400 UTC on
September 14.
=20

This year the rules are easier to understand and the sponsors say that th=
ere is
the potential for higher scores due to the use of multipliers. The URL fo=
r
rules and awards is complex and appears in the print edition of this repo=

rt.=20
If you have questions, please e-mail them to Paul Beringer NG7Z at
fistsc2c@yahoo.com.  On-line information is at
www.tomochka.com/k7fff/fnw_c2c03.html.  (FISTS)

**

## DX

In D-X, word that two separate groups will be operating from Swaziland th=
rough
the 3rd of August.  K4SV and VA7DX will be active as 3DA0SV and 3DA0WC.  =
Four
South African  operators will be on as 3DA0DX between the same dates.  QS=
L each
group as directed on the air.  (GB2RS)

## THAT FINAL ITEM:  ARNEWSLINE TAKES YOU TO A HAM RADIO BALLON LAUNCH

And finally this week, take a listen to this:

--
=E2=80=9C15,790 feet.  Course 44 degrees moving at 10 miles an hour.=E2=80=
=9D
--

That=E2=80=99s the report of one of the controllers tracking a high altit=
ude ham
radio balloon launch that took place Saturday, July 26th at the Fort Tuth=
ill
Hamfest just outside of Flagstaff Arizona.  =20

The launch was sponsored by hams belonging to Arizona Near Space Research=
.=20
Brian Bingham is a Physics teacher from Deer Valley High School in Glenda=
le,
Arizona, who came out to take part in the launch.  He says that many of t=
hose
assisting are also educators who want to bring space a bit closer to thei=
r
classrooms:

--
Bingham:  =E2=80=9CMost of the people you see out here helping are that g=
roup and a
group of Arizona high school teachers that are going to be taking on some=
 of
the balloon launches.  They will have teams from their schools do balloon
launches through the NASA Arizona Space Grant.=E2=80=9D

--

Bingham, who was a radio amateur many years ago described the system bein=
g
readied to be sent aloft:

--=20

Bingham:  =E2=80=9CYou can see a small package down here.  It was built b=
y one of the
teams from a workshop and contains temperature sensors, humidity sensors,=
 a
small still camera, solar cells all in something just a little over a pou=
nd in
weight.  It has telemetry equipment with GPS position via satellite and
transmits it back so that we an track it on the ground and recover the
equipment.=E2=80=9D

--

And how high will it all go?

--

Bingham:  The balloon will go up to somewhere in the neighborhood of 100,=
000
feet. The balloon will also swell to somewhere about forty feet in diamet=
er
before it finally bursts.  And then the parachute will bring it back down=
 to
Earth.

--

Brian Bingham says that his students will soon be choosing a project of t=
heir
own to launch to the edge of space on a future balloon flight.  It will b=
e
another educational experience made possible through the cooperative effo=
rts of
NASA, the educational community and ham radio.  (ARNewsline(tm))

I have two of those "atomic" clocks, one at home and one at work.  Both came
with admonitions in the instruction sheet to keep them at least 10 feet away
from any computers, monitors or TV sets.  Naturally, all of these items
generate intense EMI fields around them and would swamp the weak 60KHz
signal from WWVB.
Unless you can satisfy these criteria, or provide an external antenna that
you could couple to the internal antenna of your "atomic" clock, then I'm
afraid you've a couple of boat anchors on your hands.  Your clocks can only
syncronize if they have a signal that is strong enough to allow it to
receive the coded information that it needs to set the clock.  Antenna
placement is critical for these clocks.

I have several of these clocks at my house, including some atomic watches.
No problem (luckily) but the antennas aren't really that big, especially
inside the watch.

Someone suggested I could take another loopstick antenna and put it outside,
then run some wires back to the clock inside and wrap a few turns of the
wire around the clock's antenna. I would think that some tuning would be
necessary to get it to work well. I want to install a clock at a well
shielded radio station transmitter building and short of putting the entire
clock outside, I'm also running out of options.

Go to the SIRIUS radio site with your browser.  They just released 2
home/car units.  Sample their music channels  before you buy anything.
I've set up a mobile Jensen unit in my home since they launched in NY and
it works great.

>From 1988-1990, I was in college in Dayton, Ohio. At the time, there was a
5-year-old TV station (WRGT/45) which had just signed on as a FOX
affiliate.

Today I was at the website for another Dayton TV station, WHIO-TV 7. Their website also has information on Dayton's UPN station. Dayton's UPN station is apparently at Channel 44.

I've never heard of two TV stations in the same market separated by one position on the dial. I know that for technical reasons, you can't do that with radio, and I'm trying to figure out how it's being done here.

The Dayton FCC listing includes all of the stations that were there when I was in school (2, 7, 16, 22, 45), an active HDTV license on Channel 30, and HDTV applications on 41, 50 and 58. And there is an LP license on Channel 66. Nothing on 44.

In Springfield, the other major city in the area (radio and TV stations generally identify themselves as "WXYZ Dayton/Springfield"), I see a WBDT-TV26, WBDT-DT18, and a couple miscellaneous LP licenses.

The only stuff I can find at Channel 44 in Ohio: WTLW-TV Lima, WOUC-TV Cambridge, and W53BN Youngstown. There is not a single license for Channel 44 *anywhere* near Dayton. Not in Montgomery County, not in Clark County, not in any of the counties surrounding Dayton or Springfield. In fact, there are only a handful of records referring to TV44 anywhere in Ohio, according to the search I did on the FCC website.

I'm going to e-mail the station, but they have a note that "due to the volume we receive, personal replies will not always be possible."

I hope someone answers my e-mail. I'm really curious about this.

I believe "UPN 44" is on cable only.
http://www.greaterdayton.com/localinfo.shtml  (not conclusive but
suggestive)

I can't find anything about a over-the-air 44 there either.

===========================================================
That said...

Such things are no longer impossible.  It looks like part of the big
overhaul of the rules for DTV included relaxation of the channel-spacing
requirements.

Look, for example, at Philadelphia where WFPA-CA, a Class A (low-power
analog) station operates on channel 28 within a mile of full-power WTXF
channel 29.  Or, in Boston, where full-power WFXT on channel 25 is
surrounded by low-power stations WFXZ-CA (24) and WHDN-LP (26).  (they
even managed to shoehorn in a 3,000-watt LPTV on channel 3 in Boston,
between WGBH on 2 and WBZ on 4.  W38CL tried to get a permit to use
channel 3 in the Bronx but failed...)

Even here in Nashville, we have a low-power station on channel 26 - a
full-power DTV on 27 - and a full-power analog about 30 miles east of
town on 28.

Now, you still can't use adjacent channels for full-power analog
stations.  But you can definitely get a DTV in adjacent to a full-power
analog; and you can also get a low-power analog adjacent to a full-power
analog.

Apparently not... I'm not in Dayton, but your puzzle intrigued me. It looks like the WHIO web site is the only place that makes any reference to a "UPN 44", and notice there are no call letters, just "UPN44".

It looks like it's a cable-only station. If you go to one of the TV listing sites and plug in a zipcode for Dayton, then choose a cable system, you'll find a "MVC 44" listed on channel 44. Look at the listings, and they're identical to the WHIO website's listings for UPN 44.

There's also a broadcast station called WWHO on channel 53, also a UPN affiliate, but it doesn't appear to be carried on cable.

But getting back to your original point... there are not actually two stations in Dayton on 44 and 45.

(There are some places where digital stations are on adjacent channels to analog stations, but no adjacent-channel analog-analog or digital-digital.)

That's because it's NOT being done here... Dayton's "UPN 44" exists solely on local cable TV.  It just sounds odd, because most "cable-only" broadcast-style stations aren't as high up as cable position 44.

44, I believe, started off life as "MVC"... which I believe would stand for "Miami Valley Cablevision".  WHIO-TV - which runs it (Cox, I think) - only recently started calling it "UPN 44".

I don't think it is.  It looks like the ch44 is one of those made-for-cable stations.

There was something floating around either on one of these groups or maybe at 100000watts.com about two non-comm FM's on the *same* channel on opposite ends of a city.

> Sad news.  Sam Phillips, the recording studio owner who "discovered" Elvis Presley, has died at a Memphis, TN hospital at age 80.

I was working for The Tanner Company, producing promos and jingles and stuff in the late 1970's.  Each of us had a studio assigned and mine was a 16-track wonder designed by Wilton Jatan (sp?).  We guarded our settings and equipment fiercely.

Keith (?), the Tanner Sales Manager (he always carried at least a carton of cigarettes in his briefcase), brought a grey-bearded client into my studio late one afternoon, clearly after a long liquid lunch for both.  He asked me to spool up and play a jingle demo for the client.  I did, and sat back listening to it with them.  Then the client got up and started working the eq on MY Audiotronics custom board.

He fussed and fiddled with the sound until I stood up and asked him, please to stop and sit and just listen and to LEAVE MY GEAR ALONE!

At that point, Keith introduced me to Sam Phillips.

How do you tell the guy who invented Elvis to quit messing with your 2k eq switch?

Mike

Hmmm...

Easy way to find out:  Unplug your cable feed and hook up the TV set to an
antenna.

There are two stations each on 88.1 and 88.3 in Chicago.  I believe
you're correct that they're at opposite ends of the city.  One of the
88.1's is a grandfathered Class D (10-watt) operation.

For good measure, there are six more 88.1's in Chicago suburbs and five
more 88.3's.  Plus someone's managed to shoehorn in two pirates on 87.9...

Does anyone know if WOAI still uses the old ABC jingle package? They should. They all should use that or a new one that sounds GOOD. Not like the new one that anoyingly goes da da da da! (da da da!?)do do-(do do?) Some ABC affiliates still use the late 1990's one. But this new one that took the place of the 1983 version is silly. Bring back the 1983 version or make or buy a new one that makes sense.

What's been done to the NCE band in recent years is absolutely scandalous.  I was under the evidently false impression that the mission of the F.C.C. was to prevent interference, not promote it.

Channels 4 and 5 aren't actually adjacent.  There's 4 mHz of spectrum in-between.
  Channel 4 -- 66 to 72 mHz
  Channel 5 -- 76 to 82 mHz

WWHO is licensed to Chillicothe and calls them selves UPN Columbus, and
carries both WB and UPN networks for Columbus, It is available on cable in
Columbus.

Since you have a location where the clock works, why not put a small light on it and point a small wireless camera at it. Then you can monitor the time almost anywhere in the building. I have atomic clocks in my home and they only work in 2 west facing areas, so I know what your dealing with.

>In Boston, we've had WBZ-TV Channel 4 and WCVB (once WHDH-TV) Channel 5 as long as anyone can remember.<

TV Channels 4 and 5 are adjacent in number, but not in frequency.  There's a 4-MHz gap between the high end of Channel 4 and the low end of Channel 5.

The separation between those two sets of frequencies is wide enough that such an allocation is allowable.

I believe the same thing can be done with 6 and 7 (both are at opposite ends of the FM broadcast band).

|  The separation between those two sets of frequencies is wide enough
|  that such an allocation is allowable.

4 MHz.

|  I believe the same thing can be done with 6 and 7 (both are at
|  opposite ends of the FM broadcast band).

Actually there are 66.1 MHz separating the topmost FM channel and TV channel 7. In between are the aircraft band, two-way radio services, and a few other things.

One city with stations on channels 6 and 7 is Omaha.

As I rcall, there's a gap between channels 4 and 5. There's a lower tier of VHF and an upper. The last time I looked the lower tier was limited to about 100Kw and the upper about 300Kw.

Jerry, WWVB only operates at 60 KHz, while WWV is on the higher frequencies. you can not scan and lock on the best signal when there is only one signal.

Incidentally, between 4 and 5 is where cable channel 1 lives.

>>
The separation between those two sets of frequencies is wide enough that such an allocation is allowable.

I believe the same thing can be done with 6 and 7 (both are at opposite ends of the FM broadcast band).
>>

4 and 5 are allocatable to the same COL/market, as are 6 and 7 and 13 and 14.

There is now no Channel 1, although early TV receivers provided for such a channel (Philco, e.g.).

The only COL (and market) to have every possible VHF channel AND with every such channel having an offset of zero is Los Angeles.

There was talk some years ago of a 5 or 6 million watt AM in Egypt.
Not sure if it ever happened.

I'm a collector of Chick Hearn broadcasts, either TV or radio.  Has
anybody saved his games over the years, the 80's games in particular?
Here are some events/games I'm looking for:

1985 Finals Gms 4 & 6
1987 Finals Gms 1-6
1988 Finals Gm 6

1985 Parade & Rally
1987 Parade & Rally

Please email me if you are willing to sell/trade/share.

Thanks,

coop21@sbcglobal.net

Are there still clear channel stations in the U.S?  I thought they dropped
that years ago.

My guess is that the reception for both AM and FM is about the same as what you'd get with a walkman type radio.  You have 10 station presets for AM and 10 station presets for FM.  Whatever you plug into the phones jack serves as the antenna - I leave mine in my car plugged into the cassette adapter and it picks up talk shows well enough for my listening needs.

The battery runs down faster than I like(about 12 hours of record/play time, plan on getting a few rechargeable AAA's) and the manual could have been written clearer.  At $150 + $50-$100 for additional recording memory it's probably more expensive than it's worth unless you're constantly missing your favorite radio shows or just really like the conveniences offered by the device.  But I'm glad to see the product offered and hope to see competitors to drive down the price and improve the design.

It's no longer on the air. None of his stations are keeping the time period silent waiting for his return. If he does, he'll have to start from scratch. That's a very difficult, long term process for a host that didn't have that many stations to start with.

He's basically shot himself in the foot. Possibly the head. Any station that picks a new version of the show will have no idea when he'll throw another tantrum and disappear, again. Not a good way to put a successful program schedule together and give it time to grow.

He screwed his stations.

Rich

As I understand it, Hamblin left because he wasn't getting paid.
He may be looking for another syndicator but he's now off the air.

> There are a handful of 2,000,000-watt stations in the Middle East and I
> believe at least one in Europe.  I know of nothing more powerful.

My outdated edition of the World Radio/TV Handbook lists Longwave
stations in Sweden (171 kHz) and Russia (261 kHz) that claimed to be
2,500,000 watts, as well as a number of 2,000,000-watt Longwave
stations in the Middle East, Asia, and Europe.

Also, near St. Petersburg, Russia, there's a station on 1494 kHz that
transmits 1,200,000 watts (with a transmitter capable of 2 MW) through
a *26-tower* directional array with a gain of 25 dB, aimed at
Scandinavia.  The array is more than 1-1/2 miles from end to end.

BTW, right in my town, there's a 5,000,000-watt UHF TV station, but
that's the ERP due to antenna gain, not actual transmitter power.

> Are there that many daytimers left?

In the USA, AM daytime-only stations are "Class D". This used to be a strictly daytime-only classification, but quite a few years ago many of these stations were reallocated with "flea power" nighttime signals, as low as 1 WATT. Today, "Class D" AM stations are limited to a maximum of 50,000 watts daytime, but only a maximum of 250 watts at night.

I don't know what the lowest DAYTIME power level for North American AM stations is; despite it traditionally being 250 watts, there are a number of stations using less than that during the daytime; I've heard of one 170-watt daytimer, and right in my own backyard, 1170 WWTR in Bridgewater, NJ is licensed for 243 watts, non-directional, daytime-only. In that case, it's a long story -- the station originated as WBRW, a 500-watt directional daytimer which went dark in 1990. Their license was subsequently bought out with the intent of getting it back on the air under new ownership. Unfortunately, the original WBRW transmitter site was vandalized beyond repair and the towers were taken down, so in order to help simplify the construction of a new site, they were granted a Construction Permit to change to a one-tower non-directional signal, which necessitated the power reduction to 243 watts. So, in effect, New Jersey got a "new" AM

daytimer in 1997 -- even though the FCC stopped accepting applications
for new daytimers a decade earlier!

Again, aacPlus would provide FM talk to AM stations, better sound on both
the host and callers.

Thanks for the links, dude ;-), they were most helpful.

First-adjacents get the major step-on while seconds get their share of hash.

To be fair, much of the hiss (in regard to listening to 930) was on stereo reception.  In mono the hiss was less, but still annoying.  It's a noisy signal that a strong signal doesn't fix.  And don't get me started on the telephone tin-can quality of what's left of the analog signal.

920 & 940 were both obliterated, an inexcusable situation.  The fact these stations were receivable without analog interference from 930 suggests these are receivable AM stations being jammed (ok, not intentionally, we'll say involuntary stomping on).  Wasn't the FRC (Federal Radio Commission, predecessor to the FCC) formed to stop this kind of interference?

As stated before, this isn't IBOC but IBAC twice (an in-band adjacent channel on both sides) with a hit to the main channel to boot (hiss & reduced fidelity).

IMHO the only answer is for the FCC to allocate spectrum in the short-wave band for DRM to replicate current AM service in digital.  The FCC allocated new bandwidth for FM, let them do the same for DRM.

Hello all.

I designed a page a little over a year ago for a classic rocker in NH. This is a killer site.

They opted to move thier site in house on a Windows 2000 server and their
new site designer couldn't make some of the features work on the new server so they opted for a new site.

I retained ownership of this design and am reselling it cheap.  It is a very nice classic rock page complete with Flash open and really nice java scripts.

This site originally cost $7000 to develop.   I will customize it, set it up and host it for 1 year for $800.

You can see the site at http://www.onephiladelphia.com/q-106

Interested parties email vald@onephiladelphia.com.

Thanks

Val

|
| In LA, 53.3% of all persons 12+ listen to radio in the 7 to Midnight time
| period.

But what does the hour-by-hour breakdown look like? And are other
markets comparable? With a time period that broad, and a criterion
that easy to meet, it could just as easily be that the figure is
skewed from leftover PM drive listening (e.g. people with
hour+-long commutes).

| Keep in mind that in deep winter, sunset may happen in the middle of
| afternoon drive and sunrise late in morning drive. That means a daytimer in
| a middle latitude may operate from 6:30 AM to 4:45 PM.

At about 38 or 39 degrees in the center of any time zone, the minimum
time period for daytime operation would be 7.15 am to 4.45 pm.
Chicago's typically is 7.15 am to 4.15 pm. The comparable time
period in Houston (29 or 30 degrees) was 6.45 or 7 am
(I forget which) to 5.30 pm. The PSRA helps AM drive for these
stations somewhat. It probably isn't as big a factor as it was 30
years ago when PSRAs were first granted on a widescale basis and is
probably most meaningful for small-town community-style stations.

| So night operation is critical.
|
| > I wonder if a good, solid cost/benefit analysis has really been

|
| Since overall ratings performance and pricing are based on 6AM-Mid, Mon-Sun,
| you don't see many daytimes doing well anywhere.

I thought the figures for daytimers were, at least at one time, weighted to account for hours actually on the air. If not, it seems to be a serious skewing of the figures, not that I've ever felt that radio surveying methodologies were particularly good as far as statistical validity is concerned -- skew upon skew upon skew.

Charles Hobbs <chobbs@socal.rr.com> had written:

| Are there that many daytimers left? The only one I know if in LA (or
| anywhere
| else for that matter) is KBRT-740 on Avalon (KCBS stomps on it as soon as it
| gets just a little bit twilighty...)
|
| All of the other local daytime-only stations (KIEV-870, whoever's on 900
| and 1220 over in Pomona....were there any others) are full timers now
| (much to the consternation of the DXers out there....)

All the AMs in the Bay Area are full-time except for two,
KDYA/1190 and KTIM/1510. And even KTIM has a CP for DA-2 with COL Piedmont.
That's one of the benefits (I guess) of living in an area where the
nighttime signal can be shot out over the ocean.

("Bay Area" is defined here as 100 km radius from the reference coordinates
for Oakland, minus stations east of Solano, Contra Costa, Alameda,
or Santa Clara counties.)

Even back in the 1980s, when I was in Houston, I recall that, of
the AM stations, only KIKK and KCOH were daytimers.

| P.S. Wasn't the expanded band designed to give these daytimers a place to
| go be fulltimers without cluttering up the rest of the band?

No, it was more designed to resolve situations where stations had
very critical nighttime patterns to other stations, with
interference often resulting due to natural variations in
propagation. Most of the stations that got x-band allocations were
DA-N stations.

>Are there still clear channel stations in the U.S?  I thought they dropped
that years ago.<

As the term "clear channel" was originally defined (meaning, only one station
on the frequency across North America), yes...that was dropped decades ago.
IIRC, WLW was the last one.

Arbtiron, at www.arbitron.com, has a report on radio usage that anyone can
download. It shows hour by hour usage of radio on a national level.
Generally, listening levels decline form 7 PM to 11 PM, but the 7, 8 and 9
PM hours are significant.

The usage by market does nt vary widely; the 50% plus cume of radio in 7-Mid
is fairly typical

In larger communities, the countour that is usable without interference form
other stations and local noise is often only a few miles in radius. Totally
useless in these cases.

Daytimers are weighted.However, cume they can't get is cume they don't have, and the ability to show in the ratings is impaired as the station is not competitive. If you miss half of AM and PM drive in some locations in Winter, there is no way to get regular usage; radio's average listening is more based on multiple incidents of listening than length of individual incidents.

> protects WBZ, but not vice-versa.

As others here have said, that is correct. A visit to the site in Hull makes it clear that there was some pretty shrewd engineering behind that move.

As a data point, in Chicago, the very minute WNVR/1030 goes off the air at sunset, WBZ comes booming in. I think WNVR may have a license that allows it to sign on at Boston local sunrise rather than Chicago, but I don't remember for sure now.

Farther to the south, though, in Missouri, WBZ isn't much of a catch for nighttime listening while, sometimes, thanks to the time difference, KTWO can be heard in the early evening hours. In the Kansas City area, 1030 was also horked up by the station in Blue Springs which has practically no nighttime signal north of the Missouri River...one of the two areas in KC with the fastest population growth. (But who listens to AM at night?)

Anybody in NJ,PA Area know of stations tossing equipment? I hear this goes on a lot. I'm looking for Cart Machines, Broadcast Boards, DA's, Mic's Etc. I'm willing to travel 100mi. from 08826. Does not matter if equipment needs repair or is old. I'll take anything. Please though I can only travel up to 100mi from 08826 And I am driving a toyota corrola, But may for special items have access to a dakota pickup. This will be for a Part 15 AM Station

Thanks,

Rev. Robert P. Chrysafis

There is a "de facto" daytimer in the Miami, FL area. This station is on 1550, with a day power of 10000 watts, and a permitted night power in the 500's. I have never heard the station at night, even when I was in Miami. Curious history about this station, a couple years ago it was on 1560, broadcasting both day and night.

I would say that most of the existing daytimers left are on clear channels.

> profitable.

On a) I suppose my phrasing was a bit ambiguous.  I didn't mean to imply that this particular station was correctly priced, only that markets are wise to price a scarce asset like a radio station according to its reach, not according to its billing in some passing, suboptimal implementation.

Whether in large communities or small, a free market in scarce licenses virtually guarantees that stations end up in the hands of the brave or foolhardy or optimistic entities that are willing to pay the most.  At least where there's no sentimental legacy attachment, as there clearly is in Bakersfield.

Can the govt. really know how many stations a market is able to support, if entrepreneurs are willing to bet their own funds that that market can support one more?  Isn't the advertising market dynamic with the evolution of traditional employees into contractors who must flog their services continually? Most importantly, doesn't the rate of return generated by that advertising market depend fundamentally on what the high bidders freely dared to pay for their licenses?  And wouldn't a Bakersfield-inspired, govt.-imposed scarcity work its way right back into the license price...to where the buyer's ROI from operations got knocked down all over again?

depends on what class AM station they are,  for example 700WLW is a class A
AM station with unlimited hrs of operation, so they are 50kw 24/7.

>while at the same time, one station, I
> think is in Mexico City, goes from 5,000 to 150,000 at nights.
> Any explanation would be appreciated and one question,
> Is there any pros and cons of running that much power?

at night the station would carry real far, and could possibly interfear with
other stations real far away, and  I guess you could say another con would
be you could have less stations on that same frequency.

> How about other countries, whats the most power a station can have?

I saw in the FCC's database a station in cuba that was at 500kw, this link
will show you all the stations in the western hemisphere.

1220 in Canyon Country is a daytimer, as is 1050 in Frazier Park, 850 in Thousand Oaks and 1050 in Big Bear.

LA is not typical, though, as it is on the coast where more AMs can go directional at night and ship power over the Pacific Ocean without having to protect anyone... a luxury not afforded to stations in Kansas City, for example.

> There is a "de facto" daytimer in the Miami, FL area. This station is on

They were operating illegally and had to move back. In the 70's and 80's, the 250 watt signal at night from towers in the waste disposal facility on 72nd south of the Airport afforded excellent coverage of the Cuban population of Miami, then concentrate mostly along the Trail.
>
> I would say that most of the existing daytimers left are on clear
channels.

As mentioned before, about 1800 AMs have power of 0-99 watts at night. That is about 40% of all AMs in the US. 900 are pure daytimers, and the rest are these with low night power, below 100 watts.

What we have now is government-imposed oversupply. When we had free competition, we had two-thirds of stations losing money, so the government stepped in to keep them on the air by allowing consolidation of ownership. Without that intervention, the less capable operators would have gone bust and we would have far fewer stations on the air than we do today, (just as when we have too many grocery stores, those that can't maintain market share go out of business). Had that happened, we might not be having all these debates about how local service has gone to hell in a handbasket. Instead, the government created a mechanism that allowed the bad operators and marginal signals to cash out at inflated prices to roll-ups -- and some of these stations were even put on the air with the specific purpose of so doing.

> I would say that most of the existing daytimers left are on clear
> channels.

There are a surprising number of daytimers that are not on clear-channels.
There are 3 within 30 miles of where I live:
1330 (a regional) WTRE Greensburg, Indiana
1390 (a regional) WZZB Seymour, Indiana
1460 )a regional) WNVI North Vernon, Indiana

Even though all 3 are daytimers, all have micro-watt night time authorizations.
WTRE is 500 watts days/33 watts nights
WZZB is 1000 watts days/ 74 watts nights
WNVI is 1000 watts days/92 watts nights.
They all do a good job of covering the city of license at night.

There is another daytimer on a Canadian Clear in this part of Indiana:
1010 (a Canadian Clear) WCSI Columbus, Indiana

WCSI is 330 watts days/13 watts nights... This station frequently gets obliterated by WINS amd CFRB at night.. especially in December and January.

>>
1220 in Canyon Country is a daytimer, as is 1050 in Frazier Park, 850 in Thousand Oaks and 1050 in Big Bear.
>>

The two 1220s in L.A. county are Class Bs, operating full time.

Canyon Counry's KIIS (Citicasters) is 1 kW days, 0.5 kW nights, DA-2 is really 1/0.5 DA-1 as the day and night parameters are the same.

Pomona's KWKW (Lotus) is 0.25 kW-U DA-2 is also really DA-1 as the day and night parameters are the same.

The 850 just outside L.A. county in Thousand Oaks has been a Class B for more than two decades, IIRC. Started out as a daytimer, however, with three towers and 0.5 kW. Added a fourth tower to add night operation at 0.25 kW.

Saul (Sol) Levine's ex-1050 in Frasier Park was always a daytimer. Apparently intended to get Sol yet another X-band allocation on-the-cheap (KFOX/1650, which see), this station is actually sited to serve Bakersfield (surprise), and has 10 kW with a 3-tower DA near the I-5/US-99 split and 0.01 kW from a single tower near Oildale, adjacent to Bakersfield. IIRC, Frasier Park is in L.A. County, or is only a few hundred yards outside thereof.

[ Moderator's note: Citicasters? Ummm... that'd be Clear Channel, would it not? As I recall, Citicasters was borged by Jacor which was in turn borged by Clear Channel... ]

I believe that the Cuban 500 kw station is on 710 kHz. This is part of

Castro's "radio war", to keep Miami's Spanish speaking Radio Mambi (710
also) from reaching the island.

I recently took apart my AM/FM walkman and found no IF transformers in
it. Do these small radios still use superheterodyne type circuits with
a fixed IF frequency (455 kHz for AM, 10.7 MHz for FM)? I would love to
put my hands on a schematic but could not locate any.

Nobody has mentioned that for 5-years of so back in the 1930's WLW
was licensed for 500,000 watts. The signal was so strong that
florescent bulbs within a few miles of the transmitter would glow, and
the station had to cut daytime power to 50,000 watts until "directional
suppressor towers" because the signal interfered with a station in
Toronto.
The whole story is on Jim Hawkin's WLW page, including other
interesting facts, pictures and schematics of the WLW transmitter site.
( http://www.hawkins.pair.com/wlw.shtml )
It doesn't mention it on this site, but I believe the station had
daytime listeners through most of the 48-states, and was heard in Hawaii
and Europe at night.

I doubt this is the newsgroup to discuss this.

You need to be more specific about what you saw inside the radio.

Except for cheap radios (and that too may have shifted in very recent years), AM radios don't rely on IF transformers for selectivity. They use ceramic filters, and for the common AM radio IFs, they'd be plastic in green or orange squares (or sometimes rectangles).

Likewise, just about any FM broadcast radio (even cheap ones) use ceramic filters, which at 10.7MHz would be three legged ceramic packages looking rather like ceramic capacitors, though usually they are marked with the IF frequency.

Though, depending on the design, there often is one IF transformer in the picture, but once the ceramic filters are in place, they are not a necessity.

Now, there seems to be a new wave of very cheap broadcast radios. If you've seen these two-button FM only radios, I can get them here for $1.99, they use an IC intended for mass consumer items. It's a superhet design, but converts down to 70KHz or so, where they can use active filters for the IF filtering. Likely big limitations on performance, but likely also acceptable for a lot of uses. I have no idea if they put these into "walkmans". The one I opened up uses a TDA7088, though in my case the prefix was missing. You can find the datasheet around the internet.

I hear, but haven't seen, that some cheap radios use a TRF IC.
A descendent of the thirty year old ZN414, but the present version
is the MK484.  Good agc action, which helps make up for the single
tuned circuit at the front end.

  Michael

At present, the highest power Cuban on the air is supposedly 150 kw, although I believe these are the last 2 or 3 remaining Czech 120 kw transmitters of which there were half a dozen in the 60's. There was one, estimated at around 200 kw, called Radio Ta�no, in the late 80's and early 90's on 1160; it broadcast partially in English with tourist information and Cuban culture; that name is now used by an FM in Holgu�n.

To the best of my knowledge, there has never been a 500 kw medium wave station in Cuba. And 710 is only moderately interfered with today by a couple of medium power local stations in 3 to 4 locations around the Cuban nation. Mamb� does not get any significant interference in its regular coverage area, and is heard widely in Cuba based on reports and letters.

And then to really rub it in Ana Log's face, those "Digital Remasters"
are of the original LP lacquer cut - dynamics lost forever.  Which is
WHY I'm such a digital kludge in the first place!

>A LOT of BIG doings at WARE 1250 AM Radio from the Palmer, Mass. area.

The next time I visit my family in Western MA I'll be sure to try and pick up the signal. I never could when I lived there.

>They have GREAT Music 5 days a week, with 2 good friends of mine, and I
>was just told maybe even more. Joey Kargol and John Dyl are on the air
>Monday - Thursday from 2:05 to 3:00 PM and Sunday from 9:00 AM to 1:00
>PM. Plus live shows they also do with Music at other times on the air at
>WARE Radio.

You forgot to tell us what kind of music. I'm sure their 55 minute shows have a tremendous impact on the weekly Arbitron numbers. I usually listen to a station because the programming is good, not because someone's friends are doing a show that's probably brokered.

>They just did a LIVE broadcast from the St.Peter and Paul
>Church Parish Picnic from Three Rivers, Mass. and that was a BIG HIT for
>sure.

I've always found that church picnics are great audience draws. If Rush Limbaugh would just do more church picnics I'm sure he could be successful one day.

>So if you are in or around the Palmer,Mass. area be sure to tune
>into my good friends Joey and JD. Im sure you will like their show.

I get up there fairly often. I'll report back with a critique.

Rich

Yes, although licensee names have largely remained unchanged through

these acquisitions -- CCU just made them subsidiaries.  Also,  Clear
Channel just sold the 1220 Canyon Country station back to the guy from
whom they bought it.

Frazier Park (correct spelling) is in Kern County, about 2 miles north of the
L.A. county line.
>>

Well, that's "only" 3520 yards ouside of L.A. county.

Since the Tx site is many, many, many miles outside of L.A. county, Frasier
(Frazier) Park might as well be inside L.A. County, for purposes of this
discussion.

Certainly, Gorman, which is the I-5 turnoff to Frasier (Frazier) Park is wholly within L.A. county ... the NW-most point, in fact.

Too, too bad Levine couldn't accomplish with his 1050 station what he did with his 540 station.

What a f**kin' "goniff".

(Yiddish, for "thief").

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

Mike,
I think you hit it on the head with TRF suggestion. I also experimented
with ZN414, I even wrote a construction article for Elementary
Electronics featuring it. I could not find any ceramic filters in my
Panasonic walkman either. Still I would like to find from an
authoritative source if TRF is being used. If you find anyting please
let me know possibly via e-mail.

Cass

news:<bg5vg5$15j$1@xuxa.iecc.com>...
: > I recently took apart my AM/FM walkman and found no IF transformers in
: > it. Do these small radios still use superheterodyne type circuits with
: > a fixed IF frequency (455 kHz for AM, 10.7 MHz for FM)? I would love to
: > put my hands on a schematic but could not locate any.

: I doubt this is the newsgroup to discuss this.

: You need to be more specific about what you saw inside the radio.

: Except for cheap radios (and that too may have shifted in very recent
: years), AM radios don't rely on IF transformers for selectivity.  They
: use ceramic filters, and for the common AM radio IFs, they'd be plastic
: in green or orange squares (or sometimes rectangles).

: Likewise, just about any FM broadcast radio (even cheap ones) use ceramic
: filters, which at 10.7MHz would be three legged ceramic packages looking
: rather like ceramic capacitors, though usually they are marked with the
: IF frequency.

: Though, depending on the design, there often is one IF transformer
: in the picture, but once the ceramic filters are in place, they
: are not a necessity.

```
: Now, there seems to be a new wave of very cheap broadcast radios.
: If you've seen these two-button FM only radios, I can get them here
: for $1.99, they use an IC intended for mass consumer items.  It's
: a superhet design, but converts down to 70KHz or so, where they
: can use active filters for the IF filtering.  Likely big limitations
: on performance, but likely also acceptable for a lot of uses.  I
: have no idea if they put these into "walkmans".  The one I opened
: up uses a TDA7088, though in my case the prefix was missing.  You
: can find the datasheet around the internet.

: I hear, but haven't seen, that some cheap radios use a TRF IC.
: A descendent of the thirty year old ZN414, but the present version
: is the MK484.  Good agc action, which helps make up for the single
: tuned circuit at the front end.

:   Michael

I would be enormously surprised if the owners of this station, which does not serve the metro area of any radio market in Massachusetts, either paid for Arbitron audience measurement or cared what the results were.

Dennis Jackson was involved in the station's relaunch late last year, although it is not one of the stations he owns. The stations that he does own tend to have Gold-AC or Oldies formats with deep playlists.

It's in a sort of no-man's land between Worcester and Springfield. I
think its claim to fame is that it has an exit on the Mass Pike.

Yes.  Different names for the same thing.  I believe RBDS (Radio Broadcast
Data System) was the USA term for RDS (Radio Data System).

Most RDS-capable radios I've seen in stores are labelled simply RDS.

Joey and JD just did a LIVE 3 hour broadcast on WARE Radio from Spencer Chrysler in Warren, Mass. on WED. July 30th and it was a BIG HIT for sure. A lot of people were there and even MORE tuned in to the show on the radio. I did hear the broadcast and they did a GREAT job for sure. Please keep up the good work guys. I enjoyed the show very much. Thanks and Take Care, From, Tom Coss

Need Station Employees?  Need a Radio Job?

Visit the FREE RadioWeb job listing service, sponsored by Miami Lakes Educational Center's Radio Broadcast Training Program.

Post an available radio-specific job opportunity or read the list of available jobs.  We don't allow the posting on non-radio jobs or "Position Desired" listings - Just jobs about radio that are currently available.

Best of all, the service is 100% free to all.  No fees, no passwords.

visit http://www.miamiradioschool.com/index2.html

Click the link for "RadioWeb Job Center", then the link for "RadioWeb Job Listings" to read the listings.

The link to "Post An Available Position" is at the top of the same page.

Miami Lakes Educational Center is part of Miami-Dade County Public Schools.

We reserve the right to remove any posting to our web site for any reason.

There are small differences between RBDS and European style RDS, for
instance they use different codes for some of the genre categories.

I ask this because I plan to import an RBDS radio card, and there are
some Euro style RDS services here in Australia.

Sad news.  Sam Phillips, the recording studio owner who "discovered" Elvis Presley, has died at a Memphis, TN hospital at age 80.

Phillips started Memphis Recording Service (which later became Sun Records) originally as a sideline to his day-job at WREC(AM) in Memphis.  He recorded a number of country, gospel and R&B performers in the 1950s, and also allowed people to walk in off the street and, for a small fee, record their voices on acetate discs.

That's how Phillips came to discover Elvis; the teenager came in to make a record as a birthday present for his mother.  According to legend, it wa actually Phillips' secretary who heard the young Presley and suggested that Sam pay attention to "this white kid who sings black". Elvis got his acetate, but Phillips talked him into recording a couple of other, more upbeat songs with a small backing combo (IIRC including Scotty Moore on guitar and Bill Black on upright bass). The rest, as they say ...

Phillips also personally produced the earliest recordings by Johnny Cash, Roy Orbison, Carl Perkins, Jerry Lee Lewis and other early rockabilly artists, all of whom got their start on the Sun label. He sold Sun to Nashville businessman Shelby Singleton sometime during the 1960s -- I don't remember the year offhand.

More recently, Phillips had returned to broadcasting, this time as owner and operator of a small chain of stations in the Southeastern U.S. He had made guest appearances at three Rockabillyfest events in Jackson, TN as well as the dedication of the Rockabilly Hall of Fame in that city, and was scheduled to appear at the fourth Rockabillyfest in Jackson next month.

Rest in peace, Sam Phillips. And thanks for all the music.

5 MW UHFs are pretty common, really.

Here's a real challenge: list the top ten (or top five) highest gain AM stations.

That is, those with the highest maximum-to-RMS field ratio, regardless of power.

The power ratio, hence the gain, is the square of the field ratio.

Hint: start looking at stations with eight or more towers.

Second hint: look for arrays with major axes of 180 or somewhat more degrees and with minor axes of 90 degrees, more or less (210, or so, degrees and 80, or so, degrees, respectively, are among the prime candidates).

Are you going to post the answer later?

I think I did part of this exercise once before, listing all the stations with 8 or more towers, and I seem to remember that the list was not all that long.  I only checked the "field ratio" on a couple though, so don't have any idea which are the "winners".

> Is there an AM or FM station that carries Michael Savage in detroit?

Not in Detroit itself but in Dearborn -- try Clear Channel's AM 1310 "The X" (WXDX)

http://1310thex.com/schedule.html

Savage's show is carried from 7 to 9 p.m. Detroit time.

[ Moderator's Note: Dearborn isn't Detroit, but it is part of the Detroit metro. It is an inner-ring suburb that borders the city. Its major claim to fame is that it is the corporate home of Ford Motor Co., whose headquarters you can see from the Southfield Freeway heading out into Southfield. And it is also the home of Greenfield Village and the Henry Ford Museum, IIRC, which everyone should visit if they get the chance to dos o. :) ]

Would WRAL FM/TV (Raleigh NC) count?
WNYC-FM New York?

There was an urban-formatted WRAP in Virginia some years back.  Makes me
wonder if there was a KRAP somewhere out west.

Did the FCC ever inadvertently assign call letters that turned out to be
risque somehow?  There was a KOME in California for a while.  Farmville
  NC had WFAG on 1250 through the 60s and 70s.  Havelock NC presently
has a WANG on 105.1.  Any others?

I am typing this from the production studio of WCUM, Bridgeport, CT. The call letters refer to the Spanish word CUMBRE, translated to English is SUMMIT.

There used to be a KCOK (K-COK) in Tulare, CA but the calls were
changed years ago.  IIRC it's the station that's now KJUG (K-JUG), but
the logo is a moonshine jug, not a Dolly Parton jug <g>.

Ahhhhh yes. Good ol' Radio Cumbre.  Every time I'm rolling through
Connecticut I make sure to tune it in.  Good music and the deejays on
the weekend are lively without being obnoxious like the ones on New
York's Mega 97.9! :-)

>>
Are you going to post the answer later?

I think I did part of this exercise once before, listing all the stations with 8 or more towers, and I seem to remember that the list was not all that long. I only checked the "field ratio" on a couple though, so don't have any idea which are the "winners".
>>

1190 in Dallas is the winner (6 by 2); 1070 in Houston is a close second (3 by 3).

There are numerous 9- or 10-tower Canadians which are contendors.

You've got to get beyond 180 degrees, major axis, in order to make the "aperture" small enough, then you just add additional instances of those tower pairs until you get the gain way high ... certainly higher than 12.

Second challenge: name the top ten (or top five) stations with the most steel in the air.

The winner is ... 1070 in Houston, again.

On 31 Jul 2003 14:17:24 GMT, Walter Luffman <bucketbutt@bellsouth.net> wrote:

>Sad news.  Sam Phillips, the recording studio owner who "discovered" Elvis Presley, has died at a Memphis, TN hospital at age 80.
>
>Phillips started Memphis Recording Service (which later became Sun Records) originally as a sideline to his day-job at WREC(AM) in Memphis.  He recorded a number of country, gospel and R&B performers in the 1950s, and also allowed people to walk in off the street and, for a small fee, record their voices on acetate discs.
>
>That's how Phillips came to discover Elvis; the teenager came in to make a record as a birthday present for his mother.  According to legend, it wa actually Phillips' secretary who heard the young Presley and suggested that Sam pay attention to "this white kid who sings black".  Elvis got his acetate, but Phillips talked him into recording a couple of other, more upbeat songs with a small backing combo (IIRC including Scotty Moore on guitar and Bill Black on upright bass).  The rest, as they say ...

is that Elvis and the boys did a few run throughs of a few tunes, but not much was happening.They took a break and Elvis started playing and singing a revved up wild version of "Milk Cow Blues" that was so unlike anything else at the time, and the rest of the band just jumped in and followed suit. Sam, who was behind the desk adjusting the tape machine, jumped up and yelled " That's IT! DON'T LOSE THAT ENERGY! Let's record it from the top". And the rest, as they say...;-)

>
>Phillips also personally produced the earliest recordings by Johnny Cash, Roy Orbison, Carl Perkins, Jerry Lee Lewis and other early rockabilly artists, all of whom got their start on the Sun label.  He sold Sun to Nashville businessman Shelby Singleton sometime during the 1960s -- I don't remember the year offhand.

He also sold the rights to Elvis' recordings to RCA (in the 50's) in order to sign Perkins...He said he never regretted it.

>
>More recently, Phillips had returned to broadcasting, this time as owner and operator of a small chain of stations in the Southeastern U.S.  He had made guest appearances at three Rockabillyfest events in Jackson, TN as well as the dedication of the Rockabilly Hall of Fame

>in that city, and was scheduled to appear at the fourth Rockabillyfest
>in Jackson next month.

He frequently shows up in those "History of rock and roll" miniseries type documentaries. And the man was always eminently quoteable in them.

>
>Rest in peace, Sam Phillips.  And thanks for all the music.

Amen. He was a good man.

His most famous quote [paraphrased]:

" I always said that if I could find a white man who could sing like a black R&B/Blues artist, it would take over the world.Then Elvis walked through my door.
Boy, did we show the world it was true."

in the very early days of Elvis' first Sun Recordings, DJs didn't know if he was black or white.The white stations wouldn't play him cause he was to black, the R&B stations  wouldn't play him cause they thought he was white.Once the world caught a glimpse of him, though, all Hell broke loose.

People of my generation don't really understand the impact Elvis had on music, most people my age I know remember the bloated Elvis performing in Las Vegas or doing those lousy movies....

But he was THE ONE - the one who influence OUR generations heroes and made them want to be Rock- N- Rollers.

Bob Dylan
Robert Plant
Lennon and McCartney
Jimmy Page (inspired to take up guitar after hearing Elvis' "baby, Let's Play house) [A sun studio single]
 and the list goes on and on and on

Elvis' and the other Sun artists were the Heroes to OUR herous, and we have Sam Phillips to thank for it.

Trans World Radio (PJB) still operates from Bonaire with 100kw and still on 800 khz MW. About 3 years ago (not in the late 80's as someone else mentioned), TWR decided for reasons of cost to replace the old faithful unit with a new solid state transmitter. Tubes for the old 500 kw MW unit got increasingly more expensive to rebuild when they failed, and the costs of fuel to run the deisel generators higher and higher. With a reassessment of the need to "boom" into its former coverage, TWR decided to focus on the Caribbean and northern parts of S. America only as we are able to serve many of the areas further south by program distribution to local Christian stations. We do get occasional reports from US-based MW DXers and are grateful for them, but don't consdier the US a target any longer. We're airing English (though on a reduced schedule), Spanish, Portuguese and a couple of smaller Indian languages.

The PJB power plant was sold to the local electric company on Bonaire to help power the grid there. The fire mentioned above was not at TWR (PJB's) site, but rather at the R. Netherlands facility also on Bonaire.

Trust this will help clear things up.

Does anyone really admit to listening to him? It would be like wearing a sign saying that you are totally incapable of critical thought.

--
Another [C-SPAN] caller made the point more angrily
'For every American who gets killed, they should take
20 Iraquians (his term) and hang them from lamp posts.'
This, he explained, is how the Klingons from Star Trek
would handle it.

Is WARE the station that was *way* off frequency (i.e., on 1251 instead
of 1250!) last summer?  Or was that the station in New Hampshire?

(I don't remember what WARE was playing when I was up there, but I sure
remember that all-day-long heterodyne tone!)

> someone else mentioned),

My impression, born out by field strength readings by the engineer at
WKVM-810 in Puerto Rico, was that the station had ceased to run 500 kw,and
was using the big rig at lower power since sometime around 1995 or 1996.

> TWR decided for reasons of cost to replace
> the old faithful unit with a new solid state transmitter.  Tubes for
> the old 500 kw MW unit got increasingly more expensive to rebuild when
> they failed, and the costs of fuel to run the deisel generators higher
> and higher.  With a reassessment of the need to "boom" into its former
> coverage, TWR decided to focus on the Caribbean and northern parts of
> S. America only as we are able to serve many of the areas further
> south by program distribution to local Christian stations.

At least it happened finally, although too late for some of us. I owned an
AM on 805 AM in Ecuador when TWR went on the air. It nearly destroyed the
station untill I could change frequency. A friend's station in Bucaramanga,
Colombia, was driven off the air by TWR's misguided religious zeal that
caused it to stomp on the coverage and signals of over a dozen radio
stations on 790, 800 and 810 in the NE South American zone.

People here complain about arrogance as demonstrated by Clear Channel; TWR
is the supreme example of arrogance for a "cause" with no thought for all
the people injured due to their actions.

Dear Friends,

I have posted to this group on a number of occasions and have received a weath of information.  For that I am appreciative.  This time I am seek help with AM (and possibly FM) radio reception.

My question is:

What are the best ways to improve radio reception?

Here is an idea of what brought this question to light.  I live in Erie, Pennsylvania, a port city on Lake Erie.  Right across the lake is Canada (a distance of about 20 to 25 miles).  Quite frequently, like everyday, I enjoy the offerings of Canadian radio.  CKOC AM 1150, Hamilton, CHUM AM 1050, Toronto, and CFCO AM 630, Chatham-Kent are among my favorite radio stations.  I would like to know how to improve the reception of these stations with the resources that I possess.

I have an Electro Brand Multiband radio that I inherited from my father.  This is a great radio for reception, but I use this for mostly outdoor DXing.  I am not sure how to attach an external antenna to it.

I have several general purpose radios throughout the house.  The ones that I find I have the best luck with are from Radio Shack. (where else?)  I have also purchased a Ring Antenna from Radio Shack.  I had the idea of somehow attaching the Ring Antenna to above mentioned Electro Brand radio.  The instructions, however, were not clear about how to do this.  Maybe I missed something.

I also have a crawl space/half attic that is presently being used to
store nothing but insulation and hold up a roof. I believe that there
is plenty of room up there. The possibility of a wire antenna layed
from front of house to back of house is an extremely good possiblity,
but again I am unsure of how to connect radio with antenna.

I am also considering a more costly investment by getting into ham
radio. I would like to construct an antenna in back yard. But once,
again, how does the antenna get connected to radio. Any help would be
greatly appreciated.

Thank You,

David B. Berchtold

805???  I thought AM radio in Ecuador was on the 10khz band plan like the USA and Colombia.

In the past few years, though I've noticed a number of drop-in FM stations on the "even" frequencies -- 95.4, 100.2, etc.  That really has to cause hell with a lot of digitally tuned car radios that only tune in the odd frequencies.

Ahhhhh....but they're doing the work of GOD!  That forgives everything, including the jamming of your heathen programming of your station and your friend's. Be glad this isn't the Middle Ages.
They would have strung you up.... ;-)

Not currently on the FCC lists, but a sort of related call with a history of its own is.  There's a WKRP-LP (TV) licensed to Washington DC.  W-KRaP? Wonder if the TV show producers saw it that way.  Why anyone with a real station would WANT those calls is also a different matter.

> Farmville NC had WFAG on 1250 through the 60s and 70s.

Don't forget Washington DC's WGAY, first on 99.5 FM as an Easy Listening station for decades, and then briefly reincarnated by Clear Channel as WGAY 1260 AM, a syndicated Nostalgia/Adult Standards station.  I believe it was named after the station's original owner.

Also, there's KLIT on 92.7 FM in Avalon, CA.... and KRAK on 910 AM in Hesperia, CA.

And in the ham radio genre, there is a legitimate call sign "N2SEX".

First thing -- DO NOT attach an external antenna at any radio which is powered
from AC and does not have external antenna terminals.  To do so is to possibly
expose yourself or others to fire, injury, or death.

The best bet for what you want to do if the radio does not have terminals is to use one of the loop antennas that you place near the radio sold for that purpose.  Read the instructions with the device, or find them on-line at the manufacturers web site.

>I have also purchased a Ring Antenna from Radio Shack.  I had

This is supposed to be placed near the radio, not attached to it.  To find the best position, you have to experiment.

You probably could run a wire antenna in the attic, which you would attach to the terminal or wire on the Rat Shack device, not to the radio (unless the radio has an external antenna terminal.

You should also be aware that with an inexpensive radio you could just overtload the thing by using an external antenna, and cause worse rather than better reception.

>
>I am also considering a more costly investment by getting into ham

Getting into ham radio would be a great hobby, but would have nothing to do with what you are trying to do here.  Purchassing a good communications (shortwave) receiver would help with your situation, and if not a portable one it would not only accept but require an external antenna.  In that case, the wire in the attic or better yet an outdoor wire would be great.  But don't go cheap, there are lots of cheap radios out there that are more trouble than there worth.  You don't want to buy a cheap radio first and then a good one when you realize the cheap one is no good, that will cost more in the long run.

I hope this helps you.

The Radio Crazy is back!!! (Yucch!!)

Part ownership in fulltime AM for sale. (Joint venture, if you venture, you go to the joint! HI!)

The "Radio Crazy" ain't so crazy this time. We have a chance to acquire a fulltime AM in an Ohio city of 47,000 people with a county population over 225,000 !!!

Only $125,000 full price INCLUDING 12 acres of land, the two towers and the transmitter shelter. Transmitter is solid state. DA-1, two tower directional 500 watts days, less at night. About 300,000 people live in the daytime coverage area.

Active or inactive investors with at least $10,000 each are welcome.

Studios are rented from the city at $600.00 a month and I am told they are very beautiful. Perhaps even "Art Deco" !!

No "AM bashers" or other negative "NABOBS"!!

Tel: (478)741-1710 for more information. If you will not ID yourself fully, you get zero new data.

73,

Meyer Gottesman aka "The Radio Crazy" aka W6GIV
Macon, GA

There was a WKRP-AM in Atlanta for a short time in the 70's, designed specifically to cash in on the TV show's popularity. The stars of the show were invited to appear on the station's first day of broadcasting but none showed. The FCC denied the calls until someone pointed out that MTM Productions was not an actual licensee.

The first record played on the new station came up at the wrong speed. Potential advertisers thought it was a joke. It was a daytime- only station with all sorts of signal problems. As I recall, it lasted less than a year.

GTT

I was wondering which are cheaper - but still good - TV/radio transmitters.
Could you give me some link? Thanks in advance. Frank

There are three stations in Ohio that fit your "'DA-1', two tower directional 500 watts days, less at night" description, are we talking about the one in Delaware?

There was a station that had the call WKRP and I worked for that station in 1981-1982.

It was WKRP in Dallas, GA.  Mitch Lepord put the station on the air in 1979.
It was suspose to be WDLS, but WKLS in Atlanta (96 Rock), said those calls

were too close to the 96 Rock calls, and Mitch went after the WKRP ID.

And yes, it was a Crappy station to work for. 1500 KHZ, 1000 Watt daytimers, 500 Watts CH and no presunrise authroization.  Mitch started it off with a format of playing one country record, then one rock record.  It sucked. First record on WKRP Dallas was 'Lonsome looser'. It's now WDPC playing gospel music.

I did mornings there for a while. Still have airchecks and press from those days. Then walked out on them in October 1982, when the owner threatend to fire me for low sales numbers (and I was a sales/jock and hated the sales side of it).  I went to WFOM in November, 1982 and played rock, until that station got sold in 1983 and changed to christain music.

WKRP was crap, it sucked working there.

I might augment Larry's comment here,  that most ham radios now contain general coverage receivers that can tune from 150 Khz up to 30 Mhz.    These are good,  but not the most outstanding receivers for MW (the AM band) DXing.

Other alternatives = car radios always have an external antenna jack;  some DXers use those with batteries to power them.

And of course, the low-cost GE Super Radio III (they were under $50) - if you can find one - was a favorite among those who do what you wish to do.

I'm a person who only just started to investigate satellite radio, like, five minutes ago.  I'm tired of there being no country station in the NY-Metro area, and I don't believe in "video killed the radio star", so I need my radio.

It looks to me, from what I've read thus far, that satellite radio is only for vehicles, not for the home - is this true?  I'd be very disappointed, as I don't spend a great deal of time in my car.

So, is there (or not) satellite radio for the home?

Tink *~*~*

Has anyone here set up a streaming simulcast of a radio station on the internet or know anything about it.

I am interested in doing this and I don't know whether I should do it myself with my own server, what software and hardware to use, or if I should just hire a third party host.

Does anyone have any input??

Thanks

World War II - The Wireless War is proud to present our tribute to an American Icon - Bob Hope.

Featuring many of the greatest stars of the 1940s and 1950s, these historical radio broadcast feature some of Bob's greatest work.

Some of the stars joining Bob on these broadcasts include Bing Crosby, Frank Sinatra, Doris Day, Jane Russell, Jack Benny, Al Jolsen, William Holden, Jack Webb, Judy Garland, Marilyn Maxwell, and many more.

So, step back in time, crack open a soda and a smile, and remember this great entertainer and all he has done to lift our spirits, in wartime and in peace.

Tuesday, August 5, 2003 - Midnight to 11:59 PM Eastern Daylight Time.

WRKO and WEEI have north-south patterns, to protect San Francisco and Denver respectively. Their signals don't do well very far west of Boston, but cover Vermont, New Hampshire and Maine quite well at night.

We finally got the funding for our Short-Wave project and are now looking to
source the first of a series of transmitters which will be 1 kW - 5 kW and

operating single frequency allocations on 90 M - 39 M

Next problem is locating Manufacturers who are still around. We looked at this some years ago and created a list, but there seems to be a high loss factor in the industry!

Arbitron does not publish summaries. Only authorized third-party sites and
some trade magazines do, as long as the market is not under embargo.

KNEW is in Oakland and simply doesn't have the signal the competition has. To beat KGO and KSFO they'll have to come up with an entire lineup of Limbaugh quality talent. As a former ABC employee I'm willing to bet that the San Francisco stations are left alone. No corporate interference, no voicetracking, no corporate contests, etc. Both Mickey Luckoff, the GM and Jack Swanson the OM/PD are brilliant programmers and marketers. They haven't been beaten on KGO for 100 books (25 years).

>>Don't ever, ever believe what you read in ads or press releases about

Not my ads. I'm no longer with the network that makes those kinds of
claims. (Not WOR).

>>Also, watch out for ads that claim percentage increases in audience.

>Yes, and what demo are they using? Men 85+? They don't always tell you.

If you're an Arbitron subscriber they'll be on your case very quickly
if you don't source your information.

What a bunch of clueless retards.  They utterly fail to properly confirm the subscription at allaccess by verifying the email address, and they send the initial "confirmation" email (and I use that term loosely) in pure HTML that I, as a properly clued in sysadmin, reject.

Hell, allaccess' ratings don't even have as much info as rronline.com!  The R&R site goes back further and includes ratings for stations below a 1.0.

Allaccess is a joke.

I'm archiving this message and will trot it out whenever you good =
radio folks argue from the Bakersfield Theory...the theory that radio is =
spread too thin because the government allows too much competition for a =
limited audience.  Here is a station that has neither a service to offer =
nor a profit until it meets the monthly nut on $250 million.  The =
station is correctly priced on its perceived potential, irrespective of =
its actual billing...and yet Bakersfielders would have us believe that =
listener service would be enhanced if only  the FCC would engineer =
greater scarcity for the benefit of the owners.

happen?
>

I have no idea.  This also happens with FM but IMHO isn't as noticeable due
to the nature of frequency modulation.  I also doubt FM Extended Hybrid Mode
would have as detrimental an effect on its host as AM has on its (telephone
quality and hash on most AM radios).

If anyone can post an audio sample (with a link here) of an IBOC-AM using an
average AM radio please do so.

David, keep in mind that the main point about KSFO is that it has nothing to worry about as long as it has Rush. I don't want to give the impression it is in trouble, that's obviously not the case.

I do think KNEW has a chance to make a dent in KSFO's numbers, however. It depends on what approach is taken with KNEW. And remember, KSFO's signal is weak in many outlying areas as well.

Many talk stations held on pretty well to gains in the winter book with the new spring numbers, so the "kiss" may not be fleeting nationwide.

I always have wanted to know how much power are stations allowed to operate.
I remember while living in Mexico, listening to XEWA 540AM, they used to operate at 150,000 watts day and night, but now they are less than that, probably 5000 watts or something.
XEW 900 is well known, they use 250,000 watts and say they cover most

of North America.
American stations use at most 50,000 watts and they are forced to
lower their power at night, while at the same time, one station, I
think is in Mexico City, goes from 5,000 to 150,000 at nights.
Any explanation would be appreciated and one question,
Is there any pros and cons of running that much power?
How about other countries, whats the most power a station can have?

Wow, I just moved here and already there's a (somewhat) appropriate news item for RRB. But it involves TV. The translator described in this Victorville Daily Press article broadcasts the signals of a number of Los Angeles television stations into the heart of San Bernardino County.

>>
I always have wanted to know how much power are stations allowed to operate.
>>

This is specified by international treaties. For North America, this would be the North America Regional Broadcast Agreement (signed 1939, effective 1941), and the subsequent U.S.-Mexico Broadcast Agreement and U.S.-Canada Broadcast Agreement.

For Class I-A stations, only, the wording was stated to be "at least 50,000 watts" because Mexico was already using in excess of 50,000 watts.

For all other Class I-B and Class II-B stations the wording was stated to be "50,000 watts".

However, Mexico subsequently authorized 100,000 watts, during daytime only, for stations not otherwise entitled by treaty to use more than 50,000 watts.

In fact, for some stations which were limited by treaty to 10,000 watts, Mexico also allows 100,000 watts, during daytime only.

The much later "Rio" treaty further modified the rules, and allowed for the first time Mexican and Canadian operations on U.S. clear channels, as well as unrestricted operation of U.S. stations on Mexican clears.

(The earlier NARBA treaty had already authorized U.S. operations on Canadian clears, provided the stations were more than 650 miles from the U.S.-Canadian border).

>>
I remember while living in Mexico, listening to XEWA 540AM, they used to operate at 150,000 watts day and night, but now they are less than that, probably 5000 watts or something.
>>

XEWA was not the original Class I-A occupant of 540.

By 1941's NARBA, 540 was given to Canada as a Class I-A.

By the mid-1950s U.S.-Mexico agreement, 540 was added to Mexico's Class I-A list, and that frequency was assigned to San Luis Potosi, at 150,000 watts.

IIRC, XEWA is still operating with 150,000 watts.

Certainly, it is "notified" and authorized to do so.

>>
XEW 900 is well known, they use 250,000 watts and say they cover most of North America.
>>

NARBA also gave the U.S. night time priority on 800 and 900 in Alaska, although one of those stations has been changed to a U.S. clear channel on account of excessive interference from Canada.

Insofar as the U.S.-Mexican treaty, the U.S. includes all states and territories, so Hawaii, Alaska and P.R. are included, even though these states and territories really can't interfere with Mexico's "notified" operations.

However, Canada, not being contiguous with Mexico, used all Mexican clears for whatever purpose it wanted. It's just that Canada could not "notify" any Class I stations on those frequencies.

Additionally, the U.S.-Mexican treaty prohibited the U.S. from operating any station on Mexican clears at night, and also prevented any day operations greater than 1 kW. Unless specifically excepted by treaty, which covered the 50,000 watt DA-1 operations in Cleveland (1220) and New York (1050), and the 5,000 watt operation in Alaska (800 and 900).

>>

American stations use at most 50,000 watts and they are forced to lower their power at night, while at the same time, one station, I think is in Mexico City, goes from 5,000 to 150,000 at nights.
>>

U.S., Canada and The Bahamas have a 50,000 watt limit.

Unless a specific station is "notified" for lower power at night, the same power may be used night as well as day.

Class I-A and I-B (now Class A) stations are permitted a flat 50,000 watts (more for Mexico, under the conditions described above).

That is, unless the Class A is "grandfathered" at a lower power, say, 10,000 watts.

There is only one U.S. Class A station which is so grandfathered.

There is one Canadian stations which is so grandfathered (1550).

There are three Mexican stations which are so grandfathered (1000, 1190 and 1550).

>>
Any explanation would be appreciated and one question, Is there any pros and cons of running that much power?
>>

Lots of power was needed to cover "underserved" areas in decades past.

Lots of power is now needed in order to overcome all the man-made interference from the gazillions of switching power supplies used in computers and entertainment appliances.

With "Rio" stations which were formerly limited to 5,000 watts were allowed to increase to 50,000 watts.

Practically speaking, this only applies to "historical" Class III-A stations (KJR, KMJ, KKOL, KXTA, etcetera, etcetera, etcetera) as these Class III-A stations received better protection then Class III stations of inferior priority (Class III-B, e.g.).

>>
How about other countries, whats the most power a station can have?
>>

In Europe, there is/was a 1,400,000 watt station.

But, because of unauthorized use by other countries (Cypress and Israel, IIRC) the 1,400,000 watts is largely wasted at night.

| What a bunch of clueless retards.  They utterly fail to properly confirm the
| subscription at allaccess by verifying the email address, and they send the
| initial "confirmation" email (and I use that term loosely) in pure HTML that
| I, as a properly clued in sysadmin, reject.

I've never bothered. The ARB is a beauty-contest. The numbers I'd
*really* like to see are the P&Ls. Those are the ones that matter,
and those are the ones that are not likely to wind up on a web site.

Then we would find out how healthy radio really is...or whether
profit numbers are just the result of more cost-cutting. No one
ever cut costs on the path to greatness (or even less).

Not all US 50kW stations reduce power at night. The old clear-channel (not to be confused with Clear Channel) stations such as WBZ, KDKA, etc. run 50 kW all the time (except when doing transmitter or tower maintenance, etc.).

>Any explanation would be appreciated and one question,
>Is there any pros and cons of running that much power?

Pro: Bigger coverage area.
Con: Bigger electric bill.

Not really much more to it than that, IMO.

150,000 day and night.

> XEW 900 is well known, they use 250,000 watts and say they cover most
> of North America.

They say nothing like that. The signal had been dropped to 100 kw for many years, but due to high man made interference in Mexico City, they upped it again to provide good coverage of the Mexico City metro area.

> American stations use at most 50,000 watts and they are forced to
> lower their power at night,

Some US 50's are 50 day and night; a few are non-directional all hours, others go directional at night, others are directional at all hours. And then there are many 50's in the daytime, that reduce to lower levels at night... as low as 250 watts!

>while at the same time, one station, I
> think is in Mexico City, goes from 5,000 to 150,000 at nights.

Not so. In the 60's, XERF in Cd. Acu�a, Coah., on 1570 only operated at
night as it's business was mail order and preachers. This was an exception.
It is now 15 kw day and night.

No Mexico City AM has higher night power than day power.

> Any explanation would be appreciated and one question,
> Is there any pros and cons of running that much power?
> How about other countries, whats the most power a station can have?

Mexico: 250 KW. Most of Central America: 50 kw.
Colombia: 250 kw
Venezuela: 1,000,000 watts.
Chile, Argentina: 100 kw

Many European nations have 1,000,000 stations. Higher power is used in
several of the Arab nations.

Doubt it. They paid money to get consent form the Utah X-band station to get
it. It stands for "El Sol 96.3" which is the station name; in Mexico, "X" is
pronounced almost like an "S."

The market extends from north of Santa Rosa to around Campbell and Gilroy to the south, and east halfway to Stockton and Sacramento. Most people would say that a 10 mv/m signal is required to regularly and consistently overcome manmade interference in large metros; the KNEW 10 mv/m signal does not come close to covering the market in the daytime, and even less at night. Even with the CP, they will miss a large part of the market, and continue to be essentially unusable from San Jos� south.

Band-scans up and down across 930 WPAT's IBOC signal (notice how it
nearly obliterates 920 WPHY and hisses in the background of 910 WRKL
and 950 WPEN):

ftp://ftp.amstereoradio.com/uploads/wpatiboc.mp3
ftp://ftp.amstereoradio.com/uploads/wpatscn2.mp3

Switching back and forth between 1530 WSAI and 1520 WWKB, when WSAI
was testing IBOC at night and WWKB happened to be broadcasting "dead
air", making the "hash" from WSAI even more noticeable (skywave
reception from New Jersey):

> As far as TV goes, the music video channels have done exactly what the major market FM radios have done: dynamically compressed the crap out of their audio. This wreaks havic on matrix surround decoders such as Pro-logic, because the phase differential requires significant amplitude to be effective. So the front-to-surround signals just seem to "blllend" together, what I call "Velveeta surround"!

The last time I had cable TV, there was an inexcusibly large difference in loudness and audio quality between the channels, and at least 1/4th of them were in MONO.... including MTV!

And don't forget that the vast majority of today's music is highly compressed, clipped, and distorted to begin with, on CDs, and of course, encoding it into MP3/WMA/etc. makes it even worse. Even supposedly 'soft' and 'relaxed' songs like Norah Jones' hit are produced and mastered with highly limited dynamic range and clearly audible clipping distortion (for example, during the 'loud' bridge sections of "Don't Know Why" -- that grungy distortion in Norah's voice is that way *right on the CD*).

Also, for the past decade or so, "Digitally Remastered" has become nothing more than an euphemism for "highly equalized and compressed". Even supposedly "pristine" albums like Pink Floyd's "Dark Side of the Moon" have been subjected to this auditory mangling, all for the sake with making them more "competitive" with the consistent loudness of today's music. Alas, this is the reason why people are still buying turntables... when you have the choice between a dynamically superior original LP and a smashed-and-trashed CD re-release, of course the LP is going to be preferred, even by people who aren't astute enough to know the real reason why.

BTW, if you've wondered why digital photographs, even at high resolutions, just don't look as natural and realistic as traditional film photography, that's because of the limited VISUAL dynamic range of the digital camera. This effect is componded by the fact that most digital cameras store their pictures in JPG format -- which is a form of "lossy" compression, just like MP3 for audio.

> I really has more to do with TV. Actually, Soccer is very homoerotic. They wear skimpy shorts and often get them pulled down during play. Soccer players seem more physically comfortable with each other than American players. They don't seem to care what anybody thinks.

Rubgy, too... I'd love to hear the radio play-by-play of what the article below describes. It's a strange world, isn't it? American athletes go around raping and killing people, while Aussies engage in foreplay with their teammates right on the field. And was nobody suspicious when they saw this guy carrying around a tube of KY? :-)

## Rugger Resigns Over Rectal Fouls

Matt Alsdorf, Gay.com / PlanetOut.com Network
Wednesday, April 4, 2001 / 05:51 PM

Digital penetration of opposing players while on the field was deemed "unsportsmanlike interference" by Australian rugby's governing body, and the offending player has been forced to resign.

An Australian pro rugby player who resigned this weekend after being caught sticking his finger in opposing players' anuses during a match is now considering taking legal action against the New Zealand Cancer Society (NZCS) for using his picture in an advertisement for prostate cancer checks.

John Hopoate, a winger for the Australian National Rugby League's West Tigers club, received a 12-week suspension from the NRL judiciary last week for "unsportsmanlike interference" with three North Queensland players whom he digitally penetrated. The Associated Press reported that the resignation came after team management met to consider calls for his removal.

Hopoate said he believed his decision was in the best interest of the club and its fans, according to Agence France Presse. "I sincerely regret that anything I may have done has caused stress, anxiety and disappointment to everyone involved with the West Tigers," AFP quoted Hopoate as saying in a statement he released through his manager.

NZCS took out an advertisement in New Zealand's The Dominion newspaper with a color close-up of Hopoate apparently sticking his finger in North Queensland captain Paul Bowman's anus. According to the Australian Associated Press (AAP), the accompanying text reads, "A bloke's chances of developing prostate cancer increases as he gets older. If you have symptoms that you're concerned about, consult your local doctor. It won't hurt a bit -- promise."

The AAP reports that Hopoate and his manager say they were not consulted by NZCS about use of the image and are "looking at the legal ramifications." NRL chief executive David Moffett said the ad was "appalling."

But NZCS's Roger Taylor was quoted by New Zealand's One News as saying, "It's a difficult message to get across for a difficult disease ... and we felt our normal health promotion doesn't work that well and that this was a topical issue that would perhaps get it out there."

According to AFP, Hopoate, a 27-year-old teetotalling Mormon father of five, had faced the NRL's disciplinary commission seven times in the past four years, primarily for fighting.

p.s. Relevancy to this thread:  Due to its 8.5-second digital encoding/transmission/decoding delay, IBOC is incapable of broadcasting live sporting events in real-time.  And since the analog audio is also delayed to match, spectators who bring a transistor radio to the game will hear the play-by-play of what happened 8.5 seconds ago!

As the author of what you term the Bakersfield argument, I contend your argument fails because you (a) assume the station is priced correctly and the buyer did not over-pay -- which is a common phenomenon in broadcasting -- and (b) fail to take market size into account.  Los Angeles is so big that a station with a tiny percentage of the audience is still reaching so many people that it can be profitable.

In smaller markets that just isn't so.  Divide up the pie in Bakersfield thinly enough, and nobody makes any money.  Without consolidation, only the top-ranked handful of Bakersfield's 30+ signals could be operated profitably today.   Only three or four of Bakersfield stations can be considered full-service operations under the loosest definition of that term, and they're all in clusters of three or more signals.   A stand-alone, fully-staffed all-news station with a 2 share in L.A. can be hugely profitable.  A station with a 2 share in Bakersfield pretty much needs to be automated, and the rent had better be cheap.

The Los Angeles metro is listed by Arbitron with a population of 10.407.400, approximately 21 times the size of the Bakersfield metro. So a station that is really nothing but a "stick" selling for $250,000,000 in Los Angeles, is roughly analogous to such a Bakersfield station selling at between $11 and 12 million, which would be high (my employer sold a full power TV station a few years back for about that much), but I suppose it's possible.  Of course, having paid out that money, you'd have no guarantee of ever making it back.  And if you did, it would mean you really did invent a better moustrap and put somebody else out of contention.

There are a handful of 2,000,000-watt stations in the Middle East and I believe at least one in Europe.  I know of nothing more powerful.

Is that megawatter in Venezuela operating?  I've seen it mentioned from
time to time but always as "future plans".

> PS you mean > http://tinyurl.com/hmtm to be > http://tinyurl.com/htm ,
> right?

No.  TinyURL abbreviates long URLs into four-letter codes.

For example, the URL used by Google to let me post this message is:

http://posting.google.com/post?
cmd=post&enc=ISO-8859-1&msg=bfmjg0%24f7v%241%40xuxa.iecc.com&gs=/
groups%3Fdq%3D%26hl%3Den%26lr%3D%26ie%3DUTF-8%26selm%3Dbfmjg0%2524f7v%25241%2540xu
xa.iecc.com%26rnum%3D4

Feeding that mess into TinyURL resulted in the creation of this
shortcut:

http://tinyurl.com/i0b6

"Shag carpeting, platform shoes and TV translators are all relics of the 1970s."

Try telling that to residents of rural areas, as the article goes on to show.

They need a new editor.

>i cannot believe that it is allowed (fcc rules?) to disturb the regular
reception of other AM stations in the locality! why do they let this happen?<

As the FCC will tell you if you make this sort of complaint, the FCC does not
and cannot guarantee reception of any station, regardless of power output,
distance to the receiver or interference.

David Eduardo <radiodavid@yahoo.com> had written:

```
|
| The market extends from north of Santa Rosa to around Campbell and Gilroy to
| the south, and east halfway to Stockton and Sacramento. Most people would
| say that a 10 mv/m signal is required to regularly and consistently overcome
| manmade interference in large metros; the KNEW 10 mv/m signal does not come
| close to covering the market in the daytime, and even less at night. Even
| with the CP, they will miss a large part of the market, and continue to be
| essentially unusable from San Jos� south.
```

By the way, Campbell is essentially an enclave surrounded by San Jose, and is in a location that's relatively central to the rest of Santa Clara County. The probability of signal problems in Gilroy makes a little more sense to me; it's almost to San Benito County.

But, again, the question remains: what parts of the market is KNEW missing? Or to be more precise, which parts of which counties?

Heck, the eastern border of the southern upside-down panhandle of Alameda County is at the I-580/I-205 interchange. Until recent years, that would have been a part of the Bay Area only by virtue of the fact that California counties are geographically large (there are only 58 of them) compared to counties in many other states. While not in the Bay Area, I always wonder how markets are parsed into counties such as Nevada and El Dorado, which are split in two by the Sierras. (Probably this is more a factor for TV than radio.)

```

Near as I can tell, assuming local WQSX is still running it, FM IBOC is not nearly as objectionable, at least on a car receiver with average adjacent channel rejection and capture ratio.  It hasn't made an impact on the DX-ability of the adjacent channels, at least from 30 miles away.  It has no impact on second-adjacents that I've noticed.

Advertising in this country would be so much more fun if we had the guts to do such things. The act was done in public, so use it in an ad for a good cause. It was probably even broadcast, so it's no secret.

If I were the "invader" I'd let it drop. Imagine the press coverage a lawsuit like that would bring. I'd send the Comedy Central news team to cover it. Or is it more properly "uncover" it?

Salespeople and advertisers would learn a whole new meaning of the term "insertion order."

I want to be there when he explains it to the kids. Maybe he needs to start drinking - moderately.

I find it very interesting that this has been crossposted to rec.radio.digital.

Of course he resigned! It made him the butt of jokes.

|
| KIQN/Tooele UT on 1010 runs 50,000w day, 3,100w critical hours and a
| whopping 13w (yes thirteen watts) nights.
|

That station doesn't have a DA. Might it be possible that KIQN once had a DA-N and then gave it up?

Does nighttime coverage really matter any more? How much radio listening is there at night (after PM drive)? And, more to the point, is that an audience worth selling to?

I wonder if a good, solid cost/benefit analysis has really been done for stations with limited coverage that are still staying on 24/7. I suppose the costs these days are marginally low enough that a small amount of revenue would make it worthwhile.

I wonder if that's why our teams wear such protective uniforms. All
this time we thought it was to avoid breaking bones.

XEW 900 is listed at the Secretaria de Comunicaciones y
Transportes(www.sct.gob.mx) with 250 kW, along with other 3 more
stations with more than 50 kW(XEB 1220 100 kW, XEEP 1060 100kW, XEX
730 100kW). I remember listening to XEG 1050 from Monterrey, the
signal sounded better than some locals and but only at nights.
Its a shame that the Secreataria doesnt provide coverage maps for the
stations, it would be nice to see a coverage map for a 100kW or a
250kW.
Is there a way to make a map with the Effective Radiated Power, Height
above Avg. Terrain and Antenna Pattern?
XEW 900 broadcast over the Internet at www.esmas.com/wradio. The site
used to stream a few other FM radios, it dropped them and now only has
W Radio and other Pop station.
The promos of XEWA 540 used to say the covered North Mexico and the
South of the USA, and they fed their signal to regular satelite, you
could hear either a Televisa channel or the station. Satelite radio?

# The Official Old-Time Radio (OTR) FAQ
Frequently Asked Questions (FAQ) File
for OTR
(Old-Time Radio)

Last Modified: Thursday, January 16, 2003

---

Copies of this FAQ are distributed quarterly to rec.answers, rec.radio.info, rec.radio.broadcasting, rec.antiques.radio+phono and other news groups; and are on file at bloom-picayune.mit.edu in the file: /pub/usenet-by-group/news.answers/radio/old-time-faq or http://www.faqs.org/faqs/
The most recent HTML-ized version is at
http://www.old-time.com/otrfaq.html

---

## Table of contents:

Q01. What is "OTR"?
Q02. You haven't mentioned OTR music, why not?
Q03. Where can I buy recordings of old radio shows?
Q04. Which vendors have (lower prices) (higher quality) (faster response)?
Q05. Are OTR shows rebroadcast? If so, where and when?
Q06. I remember a great show called (x). When was it aired?
Q07. Are there any books about OTR?
Q08. Does anybody trade tapes of OTR shows?
Q09. What's this stuff about Copyright?
Q10. How can I get my local radio or TV station to broadcast OTR programming?
Q11. I have some old transcriptions and tapes, how can I make them sound better?
Q12. Are there any OTR clubs near me?

Q13. I have some OTR tapes of the same program, but their dates are different. Why?
Q14. Is there anywhere I can get a complete listing of all the episodes in a serial?
Q15. Is there anywhere I can get a written synopsis of the plots or themes of OTR programs?
Q16. Is there a World Wide Web page (URL) I can access for more info?
Q17. Is there an email newsletter on OTR? How do I subscribe to it?
Q18. What ever happened to the person that played [insert character] on [insert name of show]?
Q19. What is the best way to archive OTR programs?
Q20. My old reels squeak. Why does this happen, and can I fix it?
Q21. Where can I find more information about antique radios?
Q22. What is the best radio / antenna to get distant OTR stations?
Q23. Is there a group for modern radio drama ("new-time radio")?
Q24. I have only email access to the Net. Can I still get the files at your site?
Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?
Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?
Q27. All this new software is a bit difficult for me to use, as I am blind. Can you give me any assistance on how to access your page?
Q28. I am interested in re-creating some OTR drama. Where can I get scripts?
Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?
Q30. Can I chat with other OTR fans on the internet?
Q31. Where can I buy 1970s CBS Radio Mystery Theater programs?
Q32. Is there an internet news group for old time radio?
Q33. OTR network shows were usually heard at\ the same local time, no matter what the time zone. How did they do this?
Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?
Q35. Is there any information on OTR conventions?
Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?
Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?
Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?
Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?
Q40. What MP3 player is best for OTR?
Q41. I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?
Q42. Where can I find OTR to download?
Q43. I bought some CDs with OTR MP3s. Some of the programs sound pretty bad. Why is this, and how can I make them sound better? If I

make an audio CD from the MP3s, will it be better?

----------------------------------------------------------------------

Q01. What is "OTR"?

A01. OTR is an acronym for "Old Time Radio", a term loosely applied to radio programs broadcast from the dawn of broadcasting to the very early 1960s. Alternate names are "radio nostalgia", "golden age radio", etc. Usually this applies to radio drama, mystery stories, comedy and adventures. Some individuals classify the resurgence of this type of radio programming in the '60s and '70s as "Revival Radio", and similar programming since the '70s as "Modern Radio Drama". Purists even discriminate between the "Golden Age" (late '30s and the decade of the '40s) and the "Silver Age" ('50s). In any case, there are plenty of programs of various types that are enjoyable entertainment. Best of all, they don't require a large screen TV to enjoy 'em -- the "visuals" are provided by the listener's imagination.

----------------------------------------------------------------------

Q02. You haven't mentioned OTR music, why not?

A02. There was a good deal of big band, bluegrass, country and other music broadcast during this era. For some reason, there seems to be more current interest in the dramas rather than in the music. You will find much more discussion about this topic in alt.music.big-band or the various news groups specializing in music of various types. Bluegrass fans might enjoy the Old Time Music on the Radio WWW pages. (They happen to use the same acronym, "OTR", but are not affiliated with The Original Old-Time Radio (OTR) pages). In addition, there is a Big Band and Other OTR Music BBS at www.old-time.com/otrbbss.html

----------------------------------------------------------------------

Q03. Where can I buy recordings of old radio shows?

A03. There are several individuals and companies willing to sell tapes and CDs of OTR programs. A partial list can be obtained from the www.old-time.com site. Many public libraries have a small stock for perusal as well. Some vendors and collectors even have their own WWW pages.

----------------------------------------------------------------------

Q04. Which vendors have (lower prices) (higher quality) (faster response)?

A04. Prices, quality and service differ somewhat among all vendors. Check with other OTR fans to learn of their experiences, then check with potential vendors.

Audio quality is an important consideration when purchasing recorded tapes. As yet, there is no "standardized" description of sound quality. Jim Widner and other OTR collectors have suggested various metrics to describe the quality of OTR recordings. Discussion of these standardized descriptors is summarized at the www.old-time.com site

---

Q05. Are OTR shows rebroadcast? If so, where and when?

A05. Yes, several AM and FM radio stations, satellite feeds, a shortwave station, and at least one Public Access TV station rebroadcast OTR. Check the Old-Time WWW page for current info. If you learn of other sources, leave a note!

For AM listening, try the National Radio Club's AM Radio Log, 17th Edition: Complete Listing of U.S. and Canada AM Radio Stations (Mannsville, N.Y.: NRC, 1997). All AM stations carrying things like "Old Time Radio" are listed with the format code NOS (Nostalgia), and there are lots of other codes. [Order from NRC Publications, Box 164, Mannsville NY 13661-0164 USA. Price is: $22.95 post paid]

For FM listening, try Bruce F. Elving's FM Atlas (Esko, MN: FM Atlas Pub., 1993). Alongside lists, this has maps of your area and its stations as well. [Order from Bruce Elving, PO Box 336, Esko MN 55733-0336. Price Range: $11.00 + approx. $1.00 s/h]

The M Street Radio Directory, M Street at +1 615-251-1525 voice, or +1 615-251-8798 FAX. The address is M Street Corp., PO Box 23150 Nashville, TN 37202 The price for the 8th edition is $65.00 plus S&H

---

Q06. I remember a great show called (x). When was it aired?

A06. If the show was heard nationwide, look through the program databases / logs at the Old-Time site or at Jerry Haendiges' site (see answer A14 below). If the show was only on local radio, you will have more difficulty in finding an answer. Checking with your local radio stations is probably the best bet.

---

Q07. Are there any books about OTR?

A07. Yes, there are many books related to OTR. See the www.old-time.com site for a bibliography of several hundred books. There is also a page where you can read or enter critiques or reviews of various books on OTR.

Jim Widner and Everett L. Slosman left this address for a bookstore specializing in OTR books:

Rainy Day Books
P.O. Box 775, Rt. 119
Fitzwilliam, NH 03447
(603)585-3448

Bob Crump reminded us that most good used book stores will do a nationwide search for a title, if given enough time. Henry Brugsch related a good experience with the following on-line bookstore:

Acorn Books acornbks@netcom.com

There are also several "book finding" services that will help obtain old/out of print books for a fee.

---

Q08. Does anybody trade tapes of OTR shows?

A08. Yes. Check with the various on-line OTR services. Leave a note in the OTR Digest, alt.radio.oldtime, or Ray Plumlee's OTR Traders BBS at http://otr-trader.com/ Remember to observe copyright laws!

---

Q09. What's this stuff about Copyright?

A9. The copyrights on some OTR shows have expired. Several copyrights have been renewed, and some may have fallen under "common law" copyright (even though they were not originally copyrighted). 1970s era Berne Convention agreements further cloud the issue for non-lawyers. See the Old-Time WWW site for the latest "common sense" and legal citations.

A concise answer was given by 'A. Joseph Ross' (lawyer@world.std.com) (used with his permission):

> Just to get a little perspective in this controversy, copyrights do expire. Under the old copyright law, a copyright was good for 28 years from the date of first publication, renewable for another 28 years, for a total of 56. Under the 1976 act, those copyrights were extended to 75 years, provided they were renewed. Copyrights under the new law, which took effect on 1 January 1978, are good for the life of the author plus 50 years. Copyrights on anonymous works, works made for hire, etc. are good for 75 years after first publication.
>
> So, since otr has just barely been around for 75 years, little or none of it is in the public domain yet by reason of having been around for a long time. The question of what constitutes publication, and the fact that sound recordings could not be independently copyrighted until the new law took effect add additional complications.

---

Q10. How can I get my local radio or TV station to broadcast OTR programming?

A10. Call the station and tell them of the many people who like to listen to OTR. Suggest this programming will increase the number of listeners and help buy things from their advertisers.

Shawn Fulper-Smith (shawnf@cc1.uca.edu), a managing director of a non-commercial station, tells us:

> The days of radio being ruled by the artisans is over, and for some time now it has been in the hands of people who only look at the bottom line, so to reach them you must talk through public radio pledges, or through sponsors on commercial stations.

Don Fisher (dfisher@sover.net) has been successful in getting his local Public Access TV station to rebroadcast OTR. In fact, Don is the MC of the program. Contact him for hints on how to get your Public Access TV station to do something similar.

Elizabeth McLeod (lizmcl@midcoast.com), who has spent more than 15 years working in local radio, gave the following advice:

> I can tell you that one phone call from a listener means absolutely nothing to a program director. PD's are totally under the thumbs of their General Managers -- and GMs, in turn, base their decisions EXCLUSIVELY on sales issues. It doesn't matter how many people want to hear something -- if the GM doesn't think he can sell it, if the GM doesn't think it'll bring hard cash into the station, it won't get on the air. Period.
>
> The only reason a commercial station exists is to make money for its owners. ALL decisions at the station, be they about programming or anything else, are made with this in mind.
>
> Don't bother to approach the station itself, APPROACH THE STATION'S ADVERTISERS!!!
>
> Listen to the station and figure out who its biggest sponsors are. Generally, they'll be local banks, car dealers, insurance agencies, and appliance retailers. Do you know anyone connected with these advertisers? Then approach these people. Tell them you've heard their ads on such and such a station, and that you think a lot of people would be interested in hearing OTR, and that advertising on an OTR series might be a good strategy. And get your friends to do the same. And be persistent! In other words, SELL THEM ON THE IDEA!
>
> You need to keep in mind that some types of stations are more likely to air OTR than others. If your local station is has a firmly-defined format, you

are probably "S-O-L," as the saying goes. They won't break format, no matter what. On the other hand, if you have a local non-commercial community-type station, way up on the left side of the FM dial, you may have a very good chance of success.

---

Q11. I have some old transcriptions and tapes, how can I make them sound better?

A11. You might try using a good equalizer and/or digital signal processing (DSP) unit between the playback and recording devices. Some people have mentioned that the Radio Shack DSP unit does a fair job. There are also other, more expensive DSP units available from Ham radio stores and audio stores. Some subscribers have attested to the efficacy of the Timewave brand of DSP units.

There are several computer programs available to convert analog sounds (as on a tape) to a digital format (e.g. WAV file). Some of these computer programs also have noise reduction, filtering and enhancement capabilities. In many cases, application of digital technology will improve the sound of a noisy or deteriorating analog tape. There is a problem, however, if the digitized rendition is re-recorded to tape, and subsequently re-digitized for further treatment. Since digitization is a sampling technique, sampling a sample can result in extremely degraded sound patterns.

A very nice program that will convert analog material to digital format is Audiotools by Andrew Fish. For more information on this software, visit the Audiotools BBS at www.old-time.com/otrbbss.html or Andrew's site at http://www.unrelatedinventions.com/Audiotools/

From: hhoward@mindspring.com (Henry Howard)

> For cassette machines (and reel to reels for that matter) occasionally take a "Y" cord and connect the output of your cassette player to both "sides" of the "Y". Plug the combined side of the "Y" into your stereo. If the sound is mush(ier) than what you hear normally, you have a head alignment problem (assuming that the tape you are listening to was properly aligned.)

From: Ron_B._Hare@livewire.com (Ron B. Hare)

> Dolby HX on the recording deck makes an audible difference. Other audio optimization features are of negligible value for OTR. Dolby HX also requires no playback decoder.

[Dolby HX uses or "preserves" the Dolby noise reduction method of the master tape when duplicating - ed.]

---

Q12. Are there any OTR clubs near me?

A12. Check the club listings in the Old-Time WWW page, and leave a note in one of the on-line OTR groups asking about local clubs for your area. If you find a club that is not listed at www.old-time.com, ask a club officer to send a note to the webmaster with particulars about the club.
----------------------------------------------------------------------

Q13. I have some OTR tapes of the same program, but their dates are different. Why?

A13. Sometimes broadcasts are dated according to their original broadcast date, and sometimes according to a date on which they have been rebroadcast. For instance, the Armed Forces Radio Service rebroadcast many Mutual Radio transcriptions at a later date. Your tape may be of one of these later dates. Alternately, somebody might have made a mis-typopgoof.

Finally, some shows -were- broadcast more than once, and sometimes on different programs! For instance, a few Suspense shows were re-scripted / re-cast for Escape. You might also find similarities between certain SF shows as done on X Minus 1 and Dimension X.
----------------------------------------------------------------------

Q14. Is there any place where I can get a complete listing of all the episodes in a particular program series?

A14. Some on-line OTR collectors have contributed Program Logs for several well-known series. The logs are available at www.old-time.com/otrlogs/ . While you are logged in at that site, check the "Humongous OTR Database" (a database of contributed catalogs and libraries), which is searchable with your WWW browser.

The "logs and publications" entry at the Old-Time WWW site gives names and addresses of several vendors of these items (thanks to RadioJoe5@aol.com (Joe Coleman) and others).

Jerry Haendiges maintains a VERY complete set of OTR program logs, at his Vintage Radio Place: (http://www.otrsite.com/radiolog )

Jay Hickerson maintains several logs and lists, as well as -Hello Again-, an OTR newsletter. Jay is the author of The Ultimate History of Network Radio Programming and Guide to All Circulating Shows. You can see more info at http://www.old-time.com/sponsors/hickerson.html

Jay's address is:

Jay Hickerson JayHick@aol.com
Box 4321
Hamden, CT 06514
(203) 248-2887 FAX (203) 281-1322

---

Q15. Is there any place where I can get a written synopsis of the plots or themes of OTR programs?

A15. Again, some vendors include this information with their catalogs. If you would like to contribute your interpretations of OTR plots or themes, send them to the on-line OTR services or to webmaster@old-time.com for inclusion in one of the databases.

Jim Widner and others have contributed some synopses / introductions to various programs. They are on file at http://www.otr.com and http://www.old-time.com.

Also check Frank Passage's logs at the old-time WWW site; most contain a short synopsis of the program.

Many of Jerry Haendiges' logs contain excellent summaries of not only the program series, but of each episode as well.

Many of the local and national OTR clubs maintain informational libraries with this material.

---

Q16. Is there a World Wide Web page (URL) that I can access for more information?

A16. Yes, there are several WWW sites. Each site contains different information, so you might want to visit them all. The major OTR WWW sites all have links or pointers to each other, so you can explore many topical areas within old time radio. Good places to start exploring are:
www.old-time.com
or www.otr.com
or www.otrsite.com

An excellent database of OTR-related WWW sites, with an explanation of the contents of each is at
www.otr.com/cgi-bin/cgiwrap/otr/db.cgi?uid=default

---

Q17. Is there an email newsletter on OTR? How do I subscribe to it?

A17. Several newsletters currently exist. Here his how to get the best:

The Old-Time Radio Digest (AKA "Internet OTR Digest") is a very popular and freely available electronic newsletter, delivered nightly. Its purpose is to foster general discussions about the hobby of collecting, preserving and listening to OTR. To subscribe, send an email

TO: old.time.radio-request@oldradio.net
SUBJECT: subscribe

(The body of the message is ignored)

---

Q18. What ever happened to the person that played [insert character] on [insert name of show]?

A18. Check the "Personality Pages" at www.old-time.com for home pages of several well-known OTR personalities. Also check the Where Are They Now pages at www.440int.com.

---

Q19. What is the best way to archive OTR programs?

A19. The most popular way seemed to be reel-reel tapes, using each of the four tracks to record monophonically. Modern reel machines are in the > $2,000 range, and used open reel machines are becoming harder to find.

Purists claim open reel tapes are best stored "tails out", in which the tape is played (not fast-forwarded) onto the take-up reel. This method of storage makes "print through" of the magnetic sound image a little less noticeable because the "echo" will come before the louder sound that caused it, and be somewhat masked by the louder sound.

Cassettes are generally fine for portability / ease of use / exchange, but they suffer from several problems when used as a long-term storage medium. These problems include "overwinding" and splitting of the tape at the leader. Because of their thinner track width and slower speed (1 7/8 IPS), the density of the information is greater than with wider and faster (3 3/4 IPS or 7 1/2 IPS) reel tapes. This leads to a greater loss of signal (particularly high frequencies) over time.

The Hi-Fi VHS tape is gaining in popularity because of its six-hour storage capability and relatively robust mechanical construction. "Hi-Fi" decks need no video signal to synch the systems, and can thus record audio without an accompanying video signal. One T-120 Stereo Hi-Fi VHS cassette can easily hold 12 hours of OTR audio (recorded monophonically on the right and left channels independently). If the linear track can be accessed independently, this will add six more hours of recording time. There is very little fidelity loss when using this medium to duplicate programs.

Conrad Trautmann (CONRADTRAUT@delphi.com) left this note in response to a query about finding used reel-reel machines:

> You can also call Harris/Allied used equipment division at 1-800-622-0022 or call Radio World magazine at 703-998-7600 for subscription information. Radio World is an industry trade and has used equipment listings in the classifieds once a month.

(Jim Blackie [jblackie@aol.com] indicates that the Harris/Allied number has changed to: 1-800-300-0733.)

From: andy@vintagebroadcasts.com (Andy Blatt)

> I wholeheartedly recommend Play It Again, Sam of Lakewood, Ohio. They also sell used Pioneer reel decks with a warranty and accept major credit cards for repair or used machines. The address is 12611 Madison Avenue in Lakewood, Ohio 44107. The phone number (no answering machine, no fax machine) is 216-228-7330. As far as pitch control cassette decks, Marantz offers several one of which is the three-head portable PMD-430.

[Play It Again Sam has a WWW page at www.playitagainsam.com - ed]

Richard Novak (rnovak@ix.netcom.com) wrote this informative note on using Hi-Fi VHS as an archival medium:

> To clear up any misunderstandings concerning VHS HiFi machines and their ability to record audio, I offer the following..
>
> It should be understood that what distinguishes a HiFi machine from a linear machine is that the audio track is recorded helically (diagonally) on the tape along with the video track. On linear machines the audio is recorded at the upper edge of the tape (and a control track at the lower edge, if anyone wonders what the extra head is for.)
>
> On a HiFi VHS the audio is not recorded as an analog signal as would be the case with linear recording. Instead the analog audio signal frequency-modulates a carrier which is then recorded between the video tracks. A duplicate signal is also recorded linearly to maintain compatibility with linear VCRs. The FM signal recorded on the HiFi track should not be confused with FM radio broadcasts. One of my customers thought the FM switch on his HiFi was for recording FM from the radio. Today's machines no longer use the label "FM", instead use "HiFi". Less confusing.
>
> The sound recorded from FM radio broadcasts (or any other source) onto HiFi VCRs is virtually indistinguishable from the source. The material can be dubbed to cassette with no generation loss.
>
> There is no difference in audio quality using either six hour or two hour mode.
>
> It is true that at slower speeds the diagonal tracks are closer together. This does degrade the video signal as anyone knows who has compared six hour video with two hour video. But does not degrade the FM carrier with the audio track.

> The tape writing speed of the audio track in HiFi mode is the same regardless of linear speed. This is because the head speed remains constant and is independent of the linear tape speed.
>
> Worked it out once and it is around seven meters per second. Whatever it is, it's a whole bunch faster than 7 1/2 inches per second. If anyone really wants to know the writing speed, it is the circumference of the upper cylinder (or video head) multiplied by the rotational speed which is 30 revolutions per second, or 1800 revolutions per minute. (Two heads 180 degrees apart at thirty rps results in 60 frames per second.)
>
> Who cares how it works.. The point is that VHS HiFi is the best and cheapest medium around for recording masters. But not for archiving. Most experts still agree that reel to reel is the best and most reliable method of archiving. (Sticky shed syndrome from the 70s notwithstanding.)

Although Bob Burnham does not like dubbing (two-well) cassette decks for producing highest-quality cassette tapes, he does have a few recommendations:

> One of the BEST dubbing decks (if you must use one) is made by Denon. Both sides can record at the same time and both sides have pitch control, and both sides have separate output jacks for connecting to other equipment.... almost like TWO (click) TWO (click) TWO DECKS in one. Tascam (Teac's pro division) also recently introduced their model 303 double deck. If it's anything like the 202 MKII, it's probably not worth it. You pay a high price for the name, but still basically consumer grade inside and lots of plastic. Denon is better.
>
> I mentioned Kingdom Tapes in Mansfield, PA as a good source for cassette copiers, and equipment servicing. All the duplicators I have in use today came from this company. They have all the major brands (plus their own house brand), also tape decks, blank cassettes, etc. Great service (same day usually available). They'll beat anyone's price on cassette dubbers. 800-788-1122. Fax is 717-662-3875.
>
> Bob Burnham / BRC Productions / P.O. Box 2645 / Livonia, MI 48151 platecap@gatecom.com / platecap@eworld.com

Several hobbyists are now investigating the utility of using CD-ROM or MiniDisks for archival purposes. CD-ROMs can hold hundreds of hours of program material, but at the cost of time-consuming conversion from analog to digital representations. Selection of appropriate encoding and compression technologies is extremely important to prevent digital artifacts. MP3 (MPEG III) compression seems to be more favored than is RealAudio(R) compression.

---

Q20. My old reels squeak. Why does this happen, and can I fix it?

A20. There are at least two causes for "squeaky reels" on a reel-reel tape recorder. (1) The tape edge may be rubbing against the rim of a distorted take-up reel, or (2) the oxide may be sticking to your erase (or other) heads. If the former, the least frustrating alternative is probably a new take-up reel. If the latter, Fred Korb left this note:

> If you have any squeaky reels that you would like to recover, I will be glad to send you more information on how to do it. Just send me a stamped self addressed # 10 envelope and I will respond. Send your request to: Fred Korb, c/o Oldtime Radio Collectors and Traders Society, 725 Cardigan Court, Naperville, Illinois 60565-1202. I am willing to help you preserve the sounds of radio days gone by.

[Editor's note: Fred's method consists of a kit by which a lubricating film can be automatically applied to the tape as it is played. I tried it. Although temporary, it does indeed work! I'd recommend it for those squeaky tapes that you wish to re-record onto newer reels.]

---

Richard Fish (lodeston@bluemarble.net) also left this helpful info about an alternative method:

> HYRDROLYZATION is the culprit.  The tape material -- the backing, or the binder compound used to stick the magnetic particles to the plastic backing -- has absorbed water from the air.  The water molecules actually make the tape expand a bit, so it doesn't fit the machined tape-guides properly anymore; and they can interfere with the lubrication impregnated into the tape; and it is theorized they can even interfere with the polished smoothness of the tape surface.
>
> WHY SOME TAPES AND NOT OTHERS?  It depends on the formulation of the plastic backing and binder.  In the mid-70s, both 3M (Scotch) and Ampex, the two major tape manufacturers, started experimenting with their formulas. They thought they were introducing major improvements, but instead created a tape much more prone to hydrolization than anything had ever been. The problem did not show up for years, and the formulas did not get corrected until sometime in the mid-'80s. Theoretically any tape could get hydrolyzed over a long period of time, especially if stored in a high-humidity situation, but in practice most squeaky tapes were made (roughly speaking)

between 1975 and 1985.

WHAT'S THE FIX? Tom Lopez at ZBS (the most prolific and entreprenurially successful producer of radio drama in the US today) gave me his formula and I've done it many times now and it works:

Bake the tapes in a convection oven for 8 hours at 130 degrees Fahrenheit. It is entirely possible to bake a tape twice if the first time doesn't do the trick. You get about a three-week "window", sez Tom, before the tape starts to re-absorb water. So the best deal is to bake the tape and immediately make a copy. But if you forget to do it and it re-hydrolyzes, you can bake it again.

---

Q21. Where can I find more information about antique radios?

A21. An excellent place for discussions about antique radios, phonographs and accessories is the rec.antiques.radio+phono news group, created by Bill Robie. A pointer to his FAQ may also be found at http://www.old-time.com. Basically, r.a.r+p

- Is a *discussion* group, rather than a sales group (see r.a.m) - Focuses on radios, phonos, and related materials made before the 60s - Avoids "ham" radio gear (the Boat Anchors group covers that) - Has a -very- comprehensive FAQ that new folks should read

The University of Maryland has a WWW site entitled "Broadcast Pioneers' Library". This is an excellent resource for the serious / professional researcher. It can be accessed through the old-time WWW site, or directly via the URL: http://www.lib.umd.edu/UMCP/LAB/

Additional sites with pictures of old radios or other hardware resources may also be found at http://www.old-time.com

---

Q22. What is the best radio / antenna to get distant OTR stations?

A22. Several readers have been acclaiming the GE SuperRadio III as an excellent choice for picking up distant AM stations that carry OTR programming. Although the tuning dial has notoriously poor calibration, the sensitivity and selectivity seem superior to other radios.

Some readers have had good success with the Select-A-Tenna antenna advertised in several magazines, and the Grove Catalog. The S-A-T seems to be rather directional, and may eliminate off-axis interference.

Ham Radio magazines sometimes carry information about small loop antennas for AM DX-ing. Some pointers to instructions on how to build them are at http://www.old-time.com. Also, Dan Hughes (dan@soltec.net) left this note:

> Several years ago one of the electronic magazines ran plans with dimensions and number of turns, etc to build one of these antennas. I have built several and I'm no mechanic. If you (or anyone else reading this) would like a copy of the article and plans, visit my website at http://members.soltec.net/~dan

----------------------------------------------------------------------

If you are interested in AM Broadcast Band reception, and technical articles related thereto, send a SASE to the following address for their product catalog:

National Radio Club
Publications Center
PO Box 164
Mannsville, NY 13667-0164

(The National Radio Club also has a WWW page, at www.nrcdxas.org/)

----------------------------------------------------------------------

Q23. Is there a group for modern radio drama ("new-time radio")?

A23. There are several USENET groups whose charters include modern drama. Check the lists on your local Internet provider to see which are available to you.

Here is a list of some of the WWW sites for modern audio drama:

- Jim French Productions (Imagination Theatre):
  - http://jimfrenchproductions.com/
- Atlanta Radio Theatre Company:
  - http://www.artc.org
- ZBS Media:
  - http://www.zbs.org/zbs.html
- LodesTone Productions:
  - http://www.bluemarble.net/lodeston/lode.html
- Midwest Radio Theatre Workshop:
  - http://www.mrtw.org/mrtw

----------------------------------------------------------------------

Q24. I have only email access to the Net. Can I still get the files at your site?

A24. Maybe. WWW pages can be retrieved by email. Get the following file for more information:

Accessing The Internet By E-Mail
Doctor Bob's Guide to Offline Internet Access

This document is now available from several automated mail servers.

To get the latest edition, send e-mail to one of the addresses below.

To: mail-server@rtfm.mit.edu (for US, Canada & South America)
Enter only this line in the BODY of the note:
send usenet/news.answers/internet-services/access-via-email

To: mailbase@mailbase.ac.uk (for Europe, Asia, etc.)
Enter only this line in the BODY of the note:
send lis-iis e-access-inet.txt

     help
     end
```

---

Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?

A25. Yes, if you have a suitable WWW browser and sound card. Connect to any of the WWW sites mentioned above, and follow the pointers to their audio clips and / or soundbytes. Many of the soundbytes can be downloaded, and played on your computer's sound card, others will play "realtime" through your multimedia system. There is also a news group, alt.binaries.sounds.radio.oldtime, that tries to transfer OTR shows (news groups are notoriously inefficient at transferring large binary files, however).

You can select from many moderate-length soundbytes at Jerry Haendiges' Preview Listening Lounge at www.otrsite.com/ra/preview.html

---

Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?

A26. Collectors with lots of cassettes seem to use just about everything from "underbed cardboard storage boxes" to old soft drink cases. If you want your collection to have a more "professional" look, here is a note from Ron_B._Hare@livewire.com (Ron B. Hare)

> You almost need to buy cassette albums from specialty suppliers. Radio Shack used to carry a small line of these and charged too much. We are in the recording studio business, and receive catalogs from several sources. The one I like best has some of the lowest prices and unhesitatingly deals

> with individuals and will take your credit card number over the phone for instant shipment (in contrast to some who require account setup, purchase orders, prepayment, cash and other nuisances).
>
> They have two catalogs: one for audio and one for video. Cassette albums are available in a large number of different styles, sizes and capacities. The 8-cassette albums I use are CPCN.4+4M/WHT in white and CPCN.4+4M/RBLU in royal blue. Outside dimensions are 9 7/8 x 7 x 1 1/4 wide, so they fit well on a bookshelf. This model also seems to cost less per cassette than any of the other models, though logic might lead you to the conclusion that the larger capacity ones would cost less.

[Polyline has a website at www.polylinecorp.com, and their new address and phone number are:

Polyline Corporation
1401 Estes Ave.
Elk Grove Village, IL 60007]

---

Q27. All this new software is a bit difficult for me to use, as I am blind. Can you give me any assistance on how to read your page?

A27. Yes. Although my WWW page is best viewed with Netscape or Microsoft Explorer, most pages render well with LYNX and associated reader software.

Blind visitors who depend on DOS-based software to access the net, or who use a reading program to audibly display their computer's output might be interested in a program called "Nettamer". The Nettamer home page is at www.nettamer.net/

---

Q28. I am interested in re-creating some OTR drama. Where can I get scripts?

A28. Check your local or national OTR clubs. Many have a "print library" that includes scripts. You can also point your browser at the University of Maryland's script page, at www.lib.umd.edu/UMCP/LAB/scripts.html

Jack French (OTRpiano@erols.com) said:

> One excellent source is the book. "One Hundred Non-Royalty Radio Plays" compiled by William Kozlenko, Greenberg Publ of NYC 1941. It's certainly out of print now, but many libraries would have a copy. I bought mine at a used book store a few years ago. The 100 radio plays in the book include adventure, mystery, fantasy, comedy and historical. Most were originally produced on educational stations in the 30s. Authors include

> Saroyan, Julian, and Liss.

Larry Groebe, of the Generic Radio Workshop, has several pages dedicated to on-line OTR scripts at http://www.genericradio.com

---

Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?

A29. In addition to the old radio being mistuned, similar problems can be caused by one or more of the tape recorders used before you received your copy of the program. Print-through has already been mentioned in Q & A 19. Bob Burnham has a nice explanation of two more problems: crosstalk and channel leakage.

> Crosstalk and Channel Leakage are 2 different things. OTR collectors seem to have the most problem with channel leakage.
>
> When you hear another program faintly playing in the background in normal direction, this is usually Channel Leakage. This is a leftover problem from the 1970s & early '80s when most collectors traded on open reel tapes which were quarter-track mono -- there were different (separate) programs on left & right channels. This allowed 6 hours of shows to be placed on one reel. Unfortunately, many collectors would duplicate L & R shows simultaneously. Depending on the quality of the equipment (and its condition) it was common for one program to bleed into the opposite channel...especially if the collector was careless and allowed over-modulation.
>
> Crosstalk results when a tape is recorded (or played back) on a machine with mis-aligned tape heads. It can also occur when trying to record over a 1/2 track recording with a 1/4 track machine with dirty or mis-aligned erase head. You usually will hear another program playing IN REVERSE in the background.
>
> HOW TO PREVENT CHANNEL LEAKAGE AND CROSSTALK...
>
> If duplicating quarter track reels, copy ONE channel or track at a time. As for crosstalk, make certain your machines are kept in proper alignment. Use a high quality BULK ERASER if you re-use old tapes... this is especially true for those who use reels.
>
> Sorry, there is NOTHING you can do to remove these flaws once they are there.

---

Q30. Can I chat with other OTR fans on the internet?

A30. Yes. Lois Culver (lois@chatlink.com) and other OTR fans meet every Thursday at 8:00 PM Eastern time, on Channel #OldRadio, on the StarLink-IRC. If you are unfamiliar with Internet Relay Chat, please get software and instructions from your favorite Internet Service Provider or shareware/freeware software site, or connect to www.old-time.com/irc.html for basic instructions.

----------------------------------------------------------------------

Q31. I'm looking for copies of old "CBS Mystery Theatre" radio programs, primarily from the 1970s era. Does anyone know where I can call or write to obtain such items? I'd like to purchase a complete set if possible.

A31. Jack French (OTRpiano@erols.com) left the following information:

> You most certainly do not want a complete set of this series, because you couldn't afford it. There were 2,970 shows aired so even if you could find them for a buck an episode, you'd have to cough up three Gs. The series ran from 1-6-74 to 12-31-82 and since it came so late in radio history, every episode was recorded by somebody. All episodes are still copyrighted, and CBS enforces their copyrights. Therefore no dealer is going to list them, and collectors are reluctant to sell or rent them. Your only hope is to find some way to get copies in a fashion not in violation of copyright law.

Editor's note: By my count, there were about 1400 different CBSRMT shows. The rest may be duplicates.

----------------------------------------------------------------------

Q32. Is there an internet news group for old time radio?

A32. Yes. alt.radio.oldtime is available via some news servers. Since many news servers ignore alt.groups, you may need to contact your ISP to get that news group listed locally. See www.old-time.com/newsgroups.html for more information. Also try www.groups.google.com to sample some of the messages.

----------------------------------------------------------------------

Q33. OTR network shows were usually heard at the same local time, no matter what the time zone. How did they do this?

A33. Two ways: Many networks used telephone lines to carry the show from the studio to transmitter sites. The show was done live at least twice - once for the East coast, once for the West. After Bing Crosby spearheaded the introduction of recorded shows (about 1948), the East coast show was recorded for later telephone transmission to the West coast.

----------------------------------------------------------------------

Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?

A34. No. There are many books (Remember them? They have words printed on pieces of processed dead tree) written about what we now call "OTR". See answers A7 and A37. If you would like to contribute an original article about one or more facets of OTR, many of the webmasters of on-line OTR sites would be happy to consider archiving it.

---

Q35. Is there any information on OTR conventions?

A35. Yes. There are several. Here are some of the larger ones:

* Annual OTR and Nostalgia Convention in Cincinnati, OH (April)
* Radio Classics Live, Brockton MA (May)
* Annual Lum and Abner Society Convention (June)
* REPS Radio Showcase (June)
* Friends of Old-Time Radio (October)
* SPERDVAC (November)

See the convention page at www.old-time.com for specific dates and contact person info.

---

Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?

A36. Yes. Try Old Time Radio Bulletin Boards at www.old-time.com/otrbbss.html. That page contains a list of several old-time radio oriented WWW bulletin boards. You can also access OTR message boards at http://www.lofcom.com/nostalgia/phorums/

---

Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?

A37. Jack French, an expert on old-time radio and editor of Radio Recall, gives us this information:

> There's good news and bad news....the good news is if Jay's compendium says they are in circulation, somebody has them. The bad news is there is no guarantee you'll find them. Let's start at the beginning. If they're in Jay's book, and there is either the initials of a dealer, log preparer, or collector with that entry, the assumption is that person has some or maybe most. If the entry is devoid of such, we push on. Few dealers list rare shows in catalogs since so few people want to buy them. Generally the catalog represents a small part of a dealer's or collector's total holdings. There are at least forty OTR dealers in the country so you can

contact each one with a specific inquiry. Most collectors belong to at least one OTR club. There are about 20 clubs. Most will publish your request in their newsletter for little or no cost. Most of the members of OTR clubs are not on-line so this is the only way to reach them. There are over 25 state and college archives that may have the shows. Most have no catalog but will answer any reasonable inquiry. Contact them all. All of the contact addresses for OTR clubs, pubs, dealers, and archives are contained in NARA OTR Source List. Contact me separately if you're interested in this low-cost research aid.

---

Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?

A38. Just as with home made recordings of any type, the quality of OTR MP3s varies considerably. Some of the online MP3s may have been converted from low sample rate RealAudio(tm) files, others might have been "ripped" from low-generation masters. Most CD-ROMs for sale on the WWW were recorded using these varying-quality MP3s. In other words, the MP3s in themselves are "collectable" only for the enjoyment one might get from listening or further trading. They have little intrinsic value, and are of unknown quality. It might help to associate your estimate of quality with the provider's name, to attempt to predict quality and avoid long downloads of poorly prepared material.

Another point to remember - some OTR is still under copyright protection. Please observe applicable copyright laws.

---

Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?

A39. A large number of OTR personalities were interviewed by the author John Dunning. Stewart Wright, Editor of the RHAC Newsletter gave us the following information. (You can learn more about RHAC by checking their page at http://www.old-time.com/sponsors/rhac.html)

> The Radio Historical Association of Colorado (RHAC) has tapes of many OTR personalities interviews that were conducted by John Dunning in the 1980's. Several Radio personalities such as Elliot Lewis were interviewed more than once. The following is a fairly complete list of the Dunning interviews in the RHAC library.
>
> Steve Allen, Elvia Allman, Eve Arden, Hy Averback, Parley Baer, Parley Baer and Georgia Ellis, Parley Baer and Sam Edwards, Parley Baer and Whitfield Conner, Bill Baldwin, George Balzer, Harry Bartell, Andre Baruch and Bea Wain, Court Benson & Grace Matthews, Bernice Berwin, Mel Blanc, Ray Bradbury, Curley

Bradley, Frank Bresee, Candy Candido, Hal Cantor, Charles Collingwood, Whitfield Conner & Haila Stodd, Whitfield Conner and Parley Baer, Whitfield Conner and Virginia Greeg, Norman Corwin, Mary Jane Croft, D Day Program J Macvane & Lar, Dennis Day, Rosemary De Camp, John Dehner, Kenny Delmar, Jerry Devine, Howard Duff and Dick Joy, Richard Durham, Ruth Duskin Feldman, Sam Edwards, Sam Edwards and Janet Waldo, Alice Faye, George Fenneman, Morton Fine, Al Flanagan and Dick Mcdaniel, Paul Frees, Fred Friendly, Alice Frost, Art Gilmore, Roberta Goodwin (Bob Bailey's Daughter), Gale Gordon, Virginia Gregg, Virginia Gregg and Whitfield Conner, Phil Harris, Clarence Hartzell, Dennis Horseford, John Houseman, Bill Idelson, Raymond Johnson, Jack Johnstone, Jim Jordan, Dick Joy, Roland Kibbee, Sheldon Leonard, Phil Leslie, Larry Lesueur, Elliot Lewis, John Macvane, Fletcher Markle, Fletcher Markle, Grace Matthews & Court Benson, Dick McDaniel and Al Flanagan, Dick McDaniels and Pete Smythe, Marvin Miller, Shirley Mitchell, Carlton E Morris, Morris Kaplan, Frank Nelson, E Jack Neuman, Nelson Olmstead, Vic Perrin, Michael Raffetto, William N Robson, Eric Sevareid, Anne Seymour, William L. Shirer, Penny Singleton, Pete Smythe Collegiate Band, Olan Soule, Berne Surrey, Glenhall Taylor, Irene Tedrow, Cliff Thorsness, Les Tremayne, Lurene Tuttle, Veola Vonn, Janet Waldo, Gertrude Warner, Peggy Webber, Anne Whitfield, and Dr. Paul Winchell.

The Radio Enthusiasts of Puget Sound (REPS) also has interview tapes of many Old-Time Radio personalities. Most of these interviews have been conducted in the 1990's. Personalities include:

John Archer, Harry Bartell, Frank Buxton, Chris Conrad (Son of William Conrad), William Conrad, William Conrad & George Walsh, Stewart Conway, Norman Corwin, Sam Edwards, Herb Ellis, Charlie Flynn, Jim French, Sandra Gould, Burl Ives, Peggy Jordan (Granddaughter of Jim & Marian Jordan), Merrill Mael, Jo Anna March, Les Tremayne, Janet Waldo, Anne Whitfield Phillips, Rhoda Williams, and Douglas Young.

The REPS web site is located at:
http://www.homestead.com/repsonline/index.html

Yesterday USA on the Internet is doing a series of live interviews with OTR personalities about one every two weeks. They start at approximately 8 PM (ET) on alternate Sundays and are about 1 hour in length. The interviews are conducted by John or Larry Gassman. So far they have done Harry Bartell, Herb Ellis, and Conrad Binyon. Listeners can call in questions.

You can find out more information on upcoming interviews by going to the YUSA Home page at http://www.yesterdayusa.com/

---

Q40. What MP3 player is best for OTR?

A40. MP3s can be played on most computers, memory (RAM)-based players, hard-drive players, and CD-ROM based players. Each player has advantages and disadvantages. A chart comparing various CD-ROM players for OTR playback suitability is at www.old-time.com

----------------------------------------------------------------------

Q41. I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?

A41. The Library of Congress (LOC) does indeed store copies of many old-time radio shows. Any qualified person can access this material, or even get copies. There are, however, some restrictions on its use. Elizabeth McLeod (lizmcl@midcoast.com), who has done much research in the area, gives us this information:

> LOC material may be listened to at no charge at the Library's Recorded Sound Reference Center by "qualified researchers" working on a project intended for public distribution -- from a full length book to an article for your local OTR newsletter. You cannot, however, make copies of the material due to the contractural and copyright restrictions which the Library is required by law to observe. (While the LOC preserves and houses the material, it doesn't own it.)
>
> It is possible, though, to obtain copies of the material from the LOC by going thru a process which is neither fast nor inexpensive. But if you have the patience and are willing to spend the money for material you can't get any other way, here is what you do:
>
> 1. Locate the specific item in the LOC's SONIC database, accessible from the Recorded Sound Reference Center Homepage, http://lcweb.loc.gov/rr/record/
>
> 2. Make note of the LOC Call Number and description of the item you need.
>
> 3. Phone, fax, or email the Recorded Sound Reference Center with the items you are requesting -- contact information is available on site. The Reference Librarian who handles these things is Brian Cornell.
>
> 4. The Library staff will determine what legal permissions will be required in order to copy the items you want, and will contact you with the names and addresses of the people who must be approached in order to get these clearances. If the item is from the NBC Collection, you will need to clear rights with their Intellectual Property Department in New York. Additional clearances may be required if the program is under a separate copyright.
>
> 5. You must write to the people specified and ask permission to have a copy made. It's a good idea to specify why you need the

copy -- and don't just say "because Joe Blow is my favorite radio comedian." If you don't have a professional-sounding reason, make one up.

6. Wait to hear back from the Legal Entities. If you've written to NBC Intellectual Property, you will get a letter back from them in about four weeks. Two copies of a legal contract will be enclosed, specifying what you may and may not do with the recording. Sign both copies, and send one of them back to NBC.

7. NBC will advise the LOC that it has granted permission, and in about three weeks you will get back a requisition form from the Library's Phonoduplication Lab. You'll need to check it over, sign where specified, and send one copy back to them with your check for the lab fee -- which starts at $86 per hour, not including the cost of tape stock. Then, fax the other copy of the form, and a photocopy of your check to the lab, and they'll begin processing your duplication request. (Yes, the fee is outrageous -- but there are worse places to spend your money than with the entity which has done more for the physical preservation of broadcasting history than any other organization in the United States....)

8. In about four weeks, FedEx will deliver your tape. Needless to say, you may not make any commercial use of the recording in whole or in part -- and you had to sign a contract to that effect in order to get access to it. Commercial permissions are a whole separate case.

Like I said, this is not for everyone -- but if you're working on a serious project, it can be a valuable resource for getting access to material that simply isn't available anywhere else and which is unlikely ever to be released on the commercial market.

Elizabeth

---

Q42. Where can I find OTR to download?

A42. The number and location of FTP sites that provide OTR changes more rapidly than does this FAQ. Your best bet is to check the backissues of the various alt.binaries.sound(s).radio.oldtime groups on USENET.

Hint: point your browser to www.groups.google.com and try your search from there

---

Q43. I bought some CDs with OTR MP3s. Some of the programs sound pretty bad. Why is this, and how can I make them sound better? If I make an audio CD from the MP3s, will it be better?

A43. Wow. The answer to that question could fill a whole FAQ by itself. I'll try to keep it short.

Poor-sounding audio can be due to several causes. The audio on the tape from which the MP3 was made could have been poor, or the person that converted the analog audio to digital audio could have done a bad job. The statement: "remastered to digital audio" doesn't mean much, if the person doing the remastering does not pay attention to enhancing the source material.

MP3 and other digital compression techniques are lossy. That means the encoding process throws away data in order to make the file smaller. Although digital copies may not have noticeable loss, re-encoding, or encoding in a different digital format will lose even more data. Example: If somebody took a 32/22 MP3 and encoded it as a 64/44, it would sound no better than the 32/22, since data was lost in the original encode. Similarly, making a 128/44 MP3 out of an old, high-compression RealAudio(R) file would not improve the sound. The advantage to the higher bitrate is the possibility that the new encode will play in a larger number of MP3 players.

Some people record their RAs or MP3s onto cassette, and then trade the cassettes. At some time in the future, somebody else might try making an MP3 from the cassette. This analog - digital - analog - digital conversion results in a very quick deterioration of the sound because of the lossy compression I mentioned before. The new encode is a "sample of a sample". The sound deteriorates much more rapidly than does the "generation loss" experienced when duplicating tapes.

How can one tell if an MP3 was originally made with a high bitrate, or merely upsampled to a high bitrate? Listen to it, and compare it with a low bitrate sample. After all, the objective is to get as good an audio rendition as possible.

---

NOTE: URLs mentioned in this FAQ may have changed. For the latest information, point your browser to www.old-time.com, or join one of the internet mailgroups mentioned above. Email addresses listed here may have changed as well.

I think it was a low-power daytimer that upgraded to the best it can get.

> Does nighttime coverage really matter any more? How much radio
> listening is there at night (after PM drive)? And, more to
> the point, is that an audience worth selling to?

In LA, 53.3% of all persons 12+ listen to radio in the 7 to Midnight time period.

Keep in mind that in deep winter, sunset may happen in the middle of afternoon drive and sunrise late in morning drive. That means a daytimer in a middle latitude may operate from 6:30 AM to 4:45 PM. So night operation is critical.

> I wonder if a good, solid cost/benefit analysis has really been

Since overall ratings performance and pricing are based on 6AM-Mid, Mon-Sun, you don't see many daytimes doing well anywhere.

It tested briefly on 1240 (odd frequency) and never reappeared. It was some
president's boondoggle. I was told the transmitter was the same one that
operated in Costa Rica (TIRICA-625) for a few weeks in about 1971.

100 KW or more, either daytime or fulltime, are:
XEW, XEX, XEN (100 day, 20 kw night), XEEP (day @100 only), XEROK, XEWA, XEG and a permit for days at 100 for XERFR. Oh, 640 in Hidalgo owned by El Chino Wong is also licensed at 100 kw days.

> Is there a way to make a map with the Effective Radiated Power, Height
> above Avg. Terrain and Antenna Pattern?

HAAT is not applicable to AM. Local coverage is determined by power, ground conductivity, and frequency. Variations in conductivity would mean that a station might get much farther in one direction than in another, even if it is nondirectional.

Directionals are far less common in Mexico than in the US, which is why you see more stations that are 10,000 watts daytime and 250 watts at night. In Mexico City, which is big and electrically noisy, stations have discovered that they need 50 kw to adequately cover the market; many have put transmitter sites to the north or NE of the city and are shooting 50 to 100 kw over the zone. 830 AM is the next one planning to go to 100 kw. Some, like XEABC-760, have gone as high as they could with intermediate level power... in this case, 70 kw. And stations that did very well with 1 kw in the 60's like XEBS-1410, now have 25,000 watts.

Two comments -

1)  Didn't PJB,  800 khz,  Netherlands Antilles (Bonaire) run 500Kw?   Do
they still do so today?   I used to be able to pick them up in Massachusetts
as long as I turned the loopstick away from CKLW in Windsor, Ontario and
CKGM in Montreal.   It carried Radio Nederland broadcasts.   However,  the
local AMer (now WCEC or something like that) is allowed to go with something
like 77w at night.   Not a show stopper to catch DX if you're 100 miles from
its transmitter but certainly is if you're ten miles from it.

2) Of course, there are a lot of stations that are "50Kw" AMers.   Here in
Boston,  I can name four = WWZN - 1510,  WBZ - 1030,  WRKO - 680 ,  and
WEEI - 850.    However,  all except WBZ have severe pattern restrictions and
broadcast lobe restrictions that their signals -- except for WBZ -- are
beamed out toward the ocean and their signals don't go west.    Even WBZ has
a lobe dampened,  IIRC,  to protect a station in Wyoming.

Anybody heard anything about the current status of the Ken Hamblin show? Our local news-talk AM does not carry his show any longer. I called the station and they gave me a vague, rambling explanation about some kind of "contractual dispute" with his syndicator. Not that it would ruin my life if his show was cancelled on that level, but has he been discontinued in any other markets?

>>
Even WBZ has a lobe dampened,  IIRC, to protect a station in Wyoming.
>>

Bzzzzzzzzzzzzt!

Wrong answer.

WBZ is an ex-Class I-A ... the highest possible class of station, and clearly superior to the Wyoming station, which is an ex-Class II-A.

WBZ has a total null towards 90 degrees, and sends its maximum power power due west, towards Wyoming.

As a station of lesser class, the Wyoming 1030 protects WBZ, and not vice versa.

The reason WBZ operates a DA-1 is to avoid losing most of its power over the North Atlantic.

WTAM/1100 in Cleveland, WWL/870 in New Orleans, and WNBC/660 in New York once used a similar strategy.

But, now only WBZ and WWL, of all U.S. ex-Class I-As, utilize DAs.

Four of the U.S. Class I-Bs operate ND: KNX/1070, KNBR/680, WGY/810 and KOA/850.

So, twice as many ex-Class I-Bs operate ND as ex-Class I-As operate DA-1.

Yeah, that's about as believable as the reasons cyclists say they wear
skin-tight spandex outfits which are designed to be worn "commando".

Or, as believeable as Mike Savage's excuse "I didn't know I was on the
air".

> Exactly what is the point of broadcasting these zero-ratings,
> zero-advertiser, zero-listener formats in IBOC digital??

You miss the point.  The point is that, once the stations goes
digital, they can convert to music formats and be competative with FM
in terms of sound quality -- and (with good programming and promotion)
ultimately market share.

Since it will take several years for there to be a substantial
installed base of IBOC radio receivers, which stations would you
propose converting first?  The ones that already have a large
listenership, or the secondary players?  Remember, digital is an
equalizer -- you don't need to have the most powerful transmitter in
the market in order to act like you do.

What's pointless is converting the major stations that current have
talk formats, with Dr. Laura, Rush, etc.  The digital artifacts are
most noticable with talk, anyway.  What digital broadcasting does is
provide a scenario whereby the smaller AM stations that have fallen
into disuse can find new life (and from their owners' perspective,
gain value).

I believe they switched to a lower power (like 100-250kW) and a directional antenna pointed southward. (I could hardly hear them when I was in Puerto Rico back in Dec 2001. In years past, I'd visit the South, say about 50 miles south of Memphis, and hear PJB blasting away).

Yes and no.

(the night before my brother's wedding in Traverse City, Michigan PJB was BOMBING into my motel room.  I mean, they were louder than the Chicago clears less than 200 miles away.  Things must have been auroral that night.)

My understanding is PJB's power plant (they had their own...) burned
down.  When they rebuilt they decided to settle for 100kw and a
directional antenna favoring northern South America.  (Venezuela &
Colombia)

> beamed out toward the ocean and their signals don't go west.    Even WBZ has

My understanding is that WBZ's DA actually protects the *east* - they're
trying to avoid wasting power over the ocean where there's nobody (at
least nobody with a diary) listening.  The Wyoming station (KTWO Casper)
protects WBZ, but not vice-versa.

Yeah, that *was* a strange choice of frequency!

Anywhere else on the dial a million watts from Venezuela would routine
reception here.  On 1240 I'm not so sure.

Wasn't around back in 1971.  (OK, I was, but I was 12 and had no idea
you could hear foreign stations on AM...)  I'll bet the rest of the
TIRICA-625 story would be rather interesting....

Are there that many daytimers left? The only one I know if in LA (or
anywhere
else for that matter) is KBRT-740 on Avalon (KCBS stomps on it as soon as it
gets just a little bit twilighty...)

All of the other local daytime-only stations (KIEV-870, whoever's on 900

and 1220 over in Pomona....were there any others) are full timers now
(much to the consternation of the DXers out there....)

P.S. Wasn't the expanded band designed to give these daytimers a place to
go be fulltimers without cluttering up the rest of the band? Well, guess
what
didn't happen...

No. The cost was so high, and the 790-810 area on the dial became so congested they dropped to 100 kw in the early 80's. It ran 500 kw from the mid-60's to that time.

>  I used to be able to pick them up in Massachusetts
> as long as I turned the loopstick away from CKLW in Windsor, Ontario and

Only a small part of the time. Most of the time, as TWR, part of Trans World Radio, they ran preaching shows in English, Spanish and Portuguese (aimed, directinally, at Brazil).

> 2) Of course, there are a lot of stations that are "50Kw" AMers.   Here in

WBZ does not protect KTWO. KTWO protects the former 1-A clear, WBZ. WBZ is directional _TOWARDS_ KTWO. WBZ asked for a license to reduce the signal towards Cape Cod and force it to the West, over the populated areas of Mass., not the Bay. The null is on 90 degrees, and starts opening up towards 45 degrees and 135 degrees. To the West, it is the equivalent of around 70 kw.

Fine explanation of tropospheric ducting.

But that ISN"T the type of propagation involved in this report.

The propagation heard these past few weeks has been Ionospheric, by means of the sporadic E layer, about 100 km (60 miles) above the Earth's surface. Go back and read the information on the WA5IYX pages.  Here are URLs again:

http://home.swbell.net/pjdyer/
http://www.qsl.net/wa5iyx/index.html

It's an old tune, the version currently in use by Steve Scruton at BBC
Essex is a track from "The Syncopators" ....very old!!

Freedom of Speech does not guarantee a soapbox, a podium, a newspaper or a radio station to the citizens. It simply guarantees that the government will not limit an individual's right to express him or herself, but does not grant a forum to everyone.

But even if the Supreme Court did agree to that....perhaps the best result
of such a ruling would be to force a breakup of the existing broadcast
companies, Ma Bell style....

It's still a *long* way from being able to just put a transmitter on the
air and broadcast away.

In article <bec1pc$ck5$1@xuxa.iecc.com>,
Tom Desmond  <tdesmond@sprynet.com> wrote:

>While my suspicion is that the courts would toss out that argument
>pretty quickly, the Supreme Court certainly has issued rulings that have
>surprised me in the past...the fairly recent past.

And note that the courts have found in broadcasters' favor (against
the FCC) on First Amendment grounds fairly frequently in the recent
past, which is part of what has made the recent tide of deregulation
unstoppable.  The 35% TV viewership cap was one such rule that already
fell at the appellate level, and the newspaper cross-ownership rule
was, without question, going to fall soon if it were not repealed.
(The gambling-advertising case from a few years back made it clear
that any FCC rule that is waived as often as it is enforced -- like
newspaper cross-ownership -- is unlikely to stand judicial scrutiny.)

However, pretty much any argument you can make in favor of pirate
broadcasters weighs against them as much as in favor.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

WCVB-TV Boston Channel 5 of Hearst-Argyle Television, Inc. continues to broadcast the weather current conditions display mornings from 5-7am with an overlapping channel 5 logo bug, overlapping time and overlapping temperature indicator. The overlapping numbers block out the barometer reading numbers and whether the barometric pressure is rising, steady or falling.

I believe the court has ruled on that issue. Someone with legal research tools could easily find it. The bottom line is is they say you have to have a license. I think the Dunifer case made a similar argument without including the consolidation issue.

The original court refused to shut him down. You know how them
lib'ruls in Berkeley can be.

Rich

Charles Hobbs  <chobbs@socal.rr.com> wrote:
>But even if the Supreme Court did agree to that....perhaps the best result
>of such a ruling would be to force a breakup of the existing broadcast
>companies, Ma Bell style....

...which would never happen, as long as there is more than one broadcast
company out there.  Ma Bell was one company, and that was also a good
while ago.  The government wouldn't even split up Microsoft, for as
big and as imposing a behemoth as they are.

If, say, Viacom and Clear Channel were to merge (!), then maybe you'd
be able to argue it's a monopoly.  So long as the two of those remain
independent competitors, not a chance.

Anyone have a copy of Savage's Saturday commonets on MSNBC?  (The one that got him fired?)

Anyone got a sound file...or know where they are online?

Thanks!

Me

I think that most of those decisions were made based on the courts' interpretation of the 1996 Telecomm Act, not the First Amendment.

The Radio Crazy is back!

Partial interest in fulltime AM radio station still for sale. (Joint venture)  If you venture, you go to the joint! HI! Just teasing.

AM in Paducah, KY. Fulltime, 1 KW, class "C" (Formerly called Class IV, or local or graveyard, etc.).

Only $100,000 full price.

Active or inactive investors with at least $15,000 each are welcome. All investors will be on the board with full voting rights if desired.

"AM bashers" or other types of "negative nabobs" are clearly unwelcome. If you are under 18 you need a signed note from your parent(s) or a local biker!

I will disclose call letters upon showing of interest on your part.

Tel: (478)741-1710 in Macon, GA

The Radio Crazy is not that crazy! He was once Chief Engineer for a NYC AM station.

73,

Meyer Gottesman, W6GIV ala "The Radio Crazy"

XM is receive only.
Web use requires he be able to send what URL he wants to see.

Email requires sending username and password.
Therefore, it sounds extremely like your friend has been hosed by someone
who doesn't understand the Internet,. or doesn't care.

Hey Rich some domain names have value because they have been held off the market for so long and are either rare or properly descriptive of a product or service someone wants to represent online. The guy might have paid two or three years worth of renewal and wants to get some money back on his investment. Is that so damned bad? So he's trying to make a profit? That's what the free enterprise system is all about, unless you're one of those liberal thinkers who wants redistribution of wealth and the government to tell us how much money we can or cannot make, and death taxes and luxury taxes and regulations for toilet flow tank size  and internet user fees and all that crap...

This guy is just trying to unload a domain name he thinks has value. This isn't the same as cybersquatting. The guy has a name that some enterprising person might make the most of. If they happen to have servers located outside the US, they could very easily develop a music stream that pays homage to Radio Caroline and some of the other famous pirate stations of the past ... all without paying that intrusive RIAA webcasting fee for music licensing.

The guy that owns "rockandroll.com" has asked upwards of 20,000 USD for that domain since he registered it 7-8 years ago. I don't begrudge anyone developing value from a domain name. Remember -- there's always the first sucker to pay more than 50 cents for a piece of cardboard with a photo of a baseball player on it -- then lo and behold -- you've got yourself an industry!

I'm ISO airchecks from North Carolina radio stations between 1968-1972. Primarily Top 40.  If you have any to share, let me know.  (Yes, I do know about http://www.reelradio.com)....

Thanks!

WRC-03: GOOD NEWS FOR HAM RADIO - BAD NEWS FOR SUPPORTERS OF CW

The 2003 World Radiocommunications Conference in Geneva is over and there is some generally good news for ham radio. Q-News Graham Kemp, VK4BB, has been following this story and has a complete wrap up on the way that amateur radio fared:

--

The 2003 World Radiocommunication Conference concluded its discussions of the issues on its agenda on Thursday afternoon, 3 July, after marathon Plenary sessions that tested the patience and stamina of the conferees. The big news for radio amateurs is that there will be a dramatic improvement for we here in region 3 in regard the 40-meter band!

7100-7200 kHz band reallocated to the amateur service in both region 3 and 1, Region 2 7000-7300 kHz remains exclusively amateur. The change will take effect on 29 March 2009, less than six years from now!

Now the "but".. A footnote containing the names of countries that are mainly in Region 3 and the Arab States makes the band also available to the fixed and mobile services in those countries on a primary basis.

It was not easy to achieve such a positive outcome on this issue. A last-ditch effort to bridge differences was chaired by Alan Ashman of Australia.

Perhaps the magnitude of what has been accomplished for radio amateurs can best be explained this way: Never before in the history of radiocommunication has an HF broadcasting band been shifted to accommodate the needs of another service. This is not simply an accomplishment of the IARU. It would not have been possible without the cooperation of a number of broadcasters and many, many others. The people who worked with us who are not radio amateurs -- including some who were strongly opposed at the start but who acceded to the compromise --deserve much of the credit. For example, Australia came to the conference with a strong "no change" position and had to shift its position dramatically in order to embrace the compromise.

Agenda item 1.7.1 (Article 25): A package of revisions to the international Radio Regulations that are specific to the amateur and amateur-satellite services, takes effect on Saturday, 5 July 2003. Michael Owen, VK3KI, has guided the work of IARU on this issue since 1996.

Agenda item 1.7.2 (Article 19): 432-438 MHz secondary allocation for satellite-borne synthetic aperture radars was approved in Plenary.

Agenda item 1.1 (footnotes): "Footnote fever" seized some administrations in the closing hours of the conference. Fortunately, the amateur service escaped serious damage from "footnote fever" although it may be a problem in the future if countries want to climb into the footnote for fixed and mobile at 7100-7200 kHz.

As Secretary David, K1ZZ said in wrapping up his report... "It's Over! Well, the work is over; the ceremonial closing of the Conference will occur on Friday afternoon, 4 July. Then we will all be heading home, except for those who are staying for a two- day meeting to plan the preparatory work for WRC-07.

Yes, it's all beginning again...."

>From Q-News Australia, I'm Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.
--

There are two very important documents that came out of WRC 03 that every radio amateur should read.  Both were issued at the close of the conference by the International Amateur Radio Union.  The first is a final wrap up on the conference by Dave Sumner, K1ZZ.  The other is an in-depth explanation of the changes to the worlds radio regulations authored by Michael Owen, VK3KI.  You will find links to both of them on the front page of out website at www.arnewsline.org (Q-News, IARU, ARRL, WIA, others)

**

60 METERS:  A LOOK AT NIGHT ONE ON THE NEW GENTLEMENS BAND

Its being called the "New Gentlemans Band" by some.  At least thats what monitoring the first availability of the new 60 meter band as it opened to the East Coast on July 3rd.  Newsline's Don Wilbanks, was listening in from the deep South:

--
The 'New Gentlemens Band" may well be a title that will stick on 60 meters. Even as the new frequencies came to life, there was none of the on-air pushing and shoving thats so prevelant on other bands like 20 and 40 meters. Instead, those observing, operating and posting thir thoughts to the Internet seemed to agree that calm and order was the way most approached 60 meter operation.

Ron Wray, WB5HZ, was one of those listening in.  He says over the qrz.com website that it seemed as if someone had kicked an anthill at 11:00 PM Central time.  That's when hundreds of stations were conducting simultaneous QSO's on all five frequencies.

According to Wray, there were explosions of activity that continued throughout the night as each time zone jumped onto the new band in sequence.  And Wray notes the apparent success of the 50 watt effective radiated power limit.  He says that from his location in Dear Park Texas, the low power limit made it so that no one signal was sufficiently strong to completely control any particular frequency.  And because of this amateurs were able to make solid contacts despite the unbelievable level of QRM.

Robert Harper, AFZ0H, of Park Hills Missouri was another early user of 60 meters.  In his posting to QRZ, Harper said that he was very impressed by the discipline of the amateur community on opening night.  Despite the noise and the crowd, everyone seemed to keep a level head.  He says that it was an atmosphere that reminded him of the "good ol' days," adding that he cannot recall when he last observed such gentlemanly behavior under such crowded conditions.

And Bill Collins K8NQC, may have summed it up best.  In his QRZ  note he said that multiple QSO's on the same frequency will greatly help the utility of the band.  He adds that the absence of big signals is really a plus.

For the Amateur Radio Newsline, I’m Don Wilbanks, AE5DW, in New Orleans,

--

So far there seem to be no  complaints about the new spot frequencies that comprise the current 60 meter ham radio allocation.  In fact, one ham was heard to say that the rest of high frequency Amateur Radio can learn lessons in sportsmanship and courtesy by simply tuning in.  (ARNewsline(tm), from QRZ.com and other sources)

**

RADIO RULES:  ANTI-ENHANCED SSB PETITION ASSIGNED RM 10740

Its taken some time, but the FCC has now assigned the designation RM 10740 to the petition by Michael Lonneke, W0YR, of Round Hill, Virginia, and Melvin Ladisky, W6FDR, of Camarillo, California to limit the bandwidth of Single Sideband an full carrier ampletude modulated signals on all ham bands below 28 MHz.  As previously reported,  W0YR and W6FDR want SSB signals to be limited to 2.8 Kilohertz and AM to be no wider than 5.6 kilohertz.

The petitioners make no secret that their regulastory request is aimed squarely at those hams who are experimenting with enhanced SSB signals which are wider than the 2.8 kilohertz that they believe should be the maximum bandwidth.  They claim that enhanced SSB is bothersome to other operations and that some users of the pseudo mode are unwilling to cooperate in minimizing harm being caused.

What Lonneke and Ladisky have not bothered to explain is why they also targeted users of AM whom even they they freely admit are not causing a problem for other radio amateurs.

Either way, RM 10740 carries a commentary cutoff date of August 2nd.  You can let the agency know how you feel by submitting commentary by mail or using the FCC's Electronic Comment Filing System.  It’sated in cyberspace at www.fcc.gov.  Once there use the websites search function to locate RM 10740. (ARNewsline(tm))

YHOTY 2003:  JAY THOMPSON, W6JAY, NAMED ARNEWSLINE(tm) YOUNG HAM OF THE YEAR

He is not yet 18, but he is a champion class hidden transmitter hunter as well as a young ham devoted to public service and to bringing more kids into the hobby.  And for these reasons and more, a select committee of judges has named Jay Thompson, W6JAY, of Santa Ana California to receive the 2003 Amateur Radio Newsline Young Ham of the Year Award.  We have more in this report:

--

If the name Jay Thompson and the call sign W6JAY sound familiar, its because Jay has made news several times in the world of hidden transmitter hunting.  In the five years that he has been licensed, W6JAY has participated in three championship hunts has won virtually every type of medal offered in his age group.  One hunt  took him all the way to China.  And when you travel the world, hidden transmitter hunting can leave you with moments to remember:

--

Thompson: “In China it was raining.  And in the bamboo forest, when you shook the trees, you would get a mini-shower fall on you and it would just cool you off after you had been running for a while.”

--

But  his exploits in T-hunting is not the only reason that Jay was chosen as this years Young Ham of the Year.  He is also heavily involved in emergency communications and is a member of the Orange County Hospital Disaster Emergency Communications System.  This is a medical communications support group that gave W6JAY his first taste of what responding to a real emergency is like:

--

Thompson: “During the Plecencia Linda train crash I was stationed at a hospital with my dad where we helped to allocate information where patients were going.  That helped the hospitals a lot from what I heard.”

--

If Jay Thompson sounds enthusiastic about his T-hunting and emergency communications work, you have to hear what he has to say about recruiting youngsters into the hobby.  Jay believes that the future of ham radio is with the young:

--

Thompson: “I noticed that there were not very many active young Amateur Radio operators, so I have tried to do my part to get more of them in so that Amateur Radio can have a better future. It starts with the kids and as they grow up they realize that it is such a good activity and will get more people to join. If there are not any kids, then there is not very much of a future for Amateur Radio."

--

A lot of people seem to agree. In fact ARRL Southwestern Division Vice Director Tuck Miller, NZ6T, calls Jay Thompson: "...a magnet for other young hams to become actively involved in the Amateur service."

The Young Ham of the Year program is co sponsored by the Amateur Radio Newsline, Vertex Standard which manufactures Yaesu brand ham radio gear and C-Q Magazine. Jay Thompson, W6JAY, will receive his award at a presentation on Saturday August 16th at the Huntsville Hamfest in Alabama.

Right now we ask you to join us in congratulating Jay Thompson, W6JAY, as he is named 2003 Young Ham of the Year.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, reporting.

--

2003 marks the 17th consecutive year that the award has been presented. (ARNewsline(tm))

**

ENFORCEMENT: FCC ACTS IN THREE CASES

The FCC has contacted three hams on various enforcement matters. The agency's Daryl Duckworth, NN0W, has more:

--
Audio report only. Hear it at www.arnewsline.org
--

According to Duckworth, that's the FCC's enforcement actions through the period ending June 28th. (RAIN, FCC)

**

RESCUE RADIO: PERSONAL LOCATOR BEACONS NOW LEGALLY SOLD IN LOWER 48

Hams could have a new emergency communications job in the near future. T-Hunting down people in distress wearing Personal Locator Beacons.

The CGC Communicator reports that retail stores in the continental United States are now being allowed market the pricey beacon transmitters which can be activated when a person is in a dangerous situation. Proponents of Personal Locator Beacons claim that they will assist rescue teams in finding lost persons in emergency situations.

According to CGC, each beacon must be registered with NOAA before alert activations can be relayed via satellite to the Air Force Rescue Coordination Center at Langley Air Force Base in Virginia. Actual beacon alerts are recieved over the SARSAT COSPAS satellite system which is a long term cooperative effort between the United States and Russia.

More information is on line at www.sarsat.noaa.gov (CGC)

**

### RESCUE RADIO:  THE DEAN OF ARRL SECTION MANAGERS RETIRES

The dean of ARRL Section Managers, New Mexico's Joe Knight, W5PDY, stepped down from his post on July 2nd.  Knight cited poor health in his decision to retire from the volunteer position after serving for nearly 27 years.  This is a record of volunteer service longer than any other sitting SM.

Assistant Section Manager Bill Weatherford, KM5FT, of Albuquerque, has been named to fill the remainder of Knight's term, which ends on December 31st.   In his departure statement Knight said that he plans to try to help Weatherford as much as he can to assume the Sectiin Managers job.  He also thanked his constituancy for the wonderful job that they have done and asked that they support KM5FT in the same way as they did him.

Knight had recommended Weatherford's appointment as his successor.  KM5FT is an ARRL life member and has served as an Assistant Section Manager for the past two years.  (ARRL)

**

### ACCIDENTS HAPPEN:  OMAHA’S KETV-TV TOWER COLLAPSES

Joe Eisenberg, K0NEB reports that a broadcast tower being converted for digital television has fallen in Omaha Nebraska.  According to a story supplied by Joe, KETV's main broadcast antenna fell to the ground Friday July  4th.

Crews had been working to install High Definition TV technology on  the tower since May 30.  A new antenna was to replace the aging RCA TW-15 skyhook.  A station spokesman said that it is not yet clear how much the tower collapse will set back the stations conversion to digital transmission or how long it will take to clear debris and rebuild.  Nor is it known what caused the main tower to fall.  (K0NEB)

**

### RADIO CONFLICT:  PENNSYLVANIA TOWN DISCOVERS WATER AND RADIO WAVES DON'T MIX

Officials in Chambersburg, Pennsylvania have asked the FCC to intercede in a dispute between that township and Radio Station WCBG on 1590 kHz.   This, s the borough hires a Louisiana attorney to try to force the owners of the radio station to cease operating long enough for workers to finish a 2-million-gallon water storage tank project in the nearby Chambers-5 Business Park.

Chambersburg's effort to build a new, elevated, 150-foot-high water storage tank on land adjacent to WCBG's towers have stalled because workers complained of receiving RF burns. Complicating the situation are allegations that the storage tank interferes with WCBG's signal, presumably warping its radiation patterns.

WCBG operates 5 kW non-irectional daytime and, 1 kW directional at night. The whole story is on-line at http://tinyurl.com/g1dk (CGC)

**

ARRL: LOOKING FOR MULTIMEDIA PRESENTATIONS AND VIDEOS

The ARRL’s Field and Educational Services is seeking donations of Amateur Radio related presentation programs or slide shows that utilize Microsoft PowerPoint or similar computer-based slide-viewing software. The department is also interested in VHS and digital video programs to add to materials that it offers hams through the ARRL Video Series. For guidelines on whats acceptable contact Mary Lau, N1VH, 225 Main St, Newington, Connecticut 06111 or e-mail herat mlau@arrl.org. (ARRL)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

THE CHANGING OF THE GUARD: 40 METER DX’ER AL HIX, W8AH, - S.K.

On a sad note, the changing of the guard continues with news that an internationally known dx-er has died. And this news hits very close to this anchor desk. As local hams gathered for field day here in Charleston last month, word was received that Albert Hix, W8AH had become a silent key. Al passed away at his home here in Charleston on June 25. He was 85.

W8AH not only loved amateur radio, he loved his country and the freedom she provides. Al was a skilled member of the US Army signal corps, serving during world war 2 when he was appointed radio officer to General George Patton. He also served during the Korean war and returned to Paris to climb the Eiffel tower again for the daily net with the Pentagon.

After his military service, Al returned to Charleston with his wife and worked as an engineer for Union Carbide until his retirement in 1985. He pursued his beloved hobby with a new vengeance, earning his place on the DXCC honor role with 388 countries confirmed. On 40 meters, he holds the top honors with 362 entries. Al made hundreds of friends around the world through amateur radio, many of them he visited with his wife, Connie.

Avid DX'ers knew one side of Al Hix. Many of us knew another side, as WV ARRL section manager Hal Turley, KC8FS, explains…
--

(KC8FS audio)

--
A US Army chaplain presided during Al's funeral and he was laid to rest with military honors. Meanwhile, local hams seemed to man the field day CW station with a special vigor… and without the traditional W8AH at the key at start time.

(KC8FS audio)_

Al is survived by his charming wife, Connie, brother James and by hundreds of ham friends around the world and here at home in the West Virginia hills… where we knew that the only thing bigger than his signal, was the kind heart of W8AH.  (ARNewsline(tm))

**

RADIO PUBLICATIONS:  CQ RELEASES HAM RADIO MAGAZINE ANTHOLOGIES

Fans of the old Ham Radio magazine, take note: A new series of anthologies, reprinting selected articles from the pages of ham radio, is now available from the folks at CQ Magazine

The first four books in the series were introduced two weeks ago at the 2003 Dayton Hamvention.  The topics covered are: "Antennas, 1968 to1972;" "Antennas, 1973 to 1975;"Homebrewing Techniques" and "Troubleshooting Techniques."

Ham radio magazine was published from 1968 to 1990 and is generally acknowledged as the premier amateur radio technical publication of its time. CQ Communications now owns the rights to Ham Radio magazine and decided to release to compilation books based on requests from the Amateur Radio community.  They can be ordered on-line at www.cq-amateur-radio.com.  (CQ)

**

CONVENTIONS & HAMFESTS:  CINCINNATI IN JULY

On the ham radio social circuit word that the sixth annual OH KY IN Hamfest is slated for Saturday July 26th at the Diamond Oaks Caerrer Development Center in Cincinnati Ohio.  The event features a giant outdoor flea market, ham radio test sessions, vendor exhibits, door prizes and lots more.  Fur further information e-mail Lynn Ernst at wd8jaw@arrl.net  (Via press release)

**

## CONVENTIONS & HAMFESTS:  DENVER COLORADO IN AUGUST

And the Denver Radio Club Hamfest is scheduled for Sunday, August 17th at the Jefferson County Fairgrounds in Golden Colorado.  Doors open at 8:30 AM. For more information contact Bryan Steinberg, KCZ0CUA via e-ail to kcØcua@arrl.net, or via the club website at www.qsl.net/w0tx  (Via press release)

**

## HAM RADIO IN SPACE:  ARISS MARKS SUCCESSFUL EURO SPACE CENTER CONTACT

Another big success for Amateur Radio on the International Space Station.  This as U-S Astronaut Ed Lu, operating as NA1SS made contact with youngsters on Space Camp at the Euro Space Center in Belgium at 08:25 U-T-C on Monday July 7th.  .

The center operated as ON4ESC with bout 150 children gathered in the auditorium.  Some of them were Dutch speaking, others spoke only French speaking and 45 were Americans living in Europe.

Ed Lu answered the call from ON4ESC the very second the ISS was in range of the Euro Space Center.  He answered 17 questions during the nearly 8 minutes long pass.  At its closest approach, the space outpost was 2000 km south of Belgium, over the Pyrenees mountains.  AMSAT Vice Chairman Gaston Bertels, ON4WF, was on hand to oversee the operation as well as introducing the young audience to the amateur radio service, amateur radio satellites and the ham radio stations used by astronauts and cosmonauts while operating from space.  (ON4WF)

**

## DX

In DX, the question is -- did you work them?  Of coarse we are talking about DL6LAU, DL8OBQ, OH2BH, OH2NB and OH3BHL who have been Albania in preparation of setting up a training program to enhance amateur radio in that nation.  They have also been on the air as ZA1B operating on several new bands and modes including 6 meters and 2 meters.  Their operation was scheduled to conclude on July 13th with QSL's to  be handled together with the April and May ZA1B operation by OH2BH.  (OH2BH via N4GN)

Bob Cumming, W2BZY, says that he will be active on 50.110 MHz from Costa Rica TI2 through July 27th.  This, in an attempt to activate some of the less common grid square in that nation  including EJ79.  When not on 6 meters, Bob will be looking for contacts on the high frequency bands.  QSL as directed on the air. (VHF Reflector)

Also, look for Desertas Island on the air from July 23rd to the 27th.  This as the Madeira DX group activates CT9D and CT9M on RTTY from that rare location. The main purpose of this trip is to mount a VHF repeater on the island to enhance F-M coverage across the Madeira Archiplego.  The operators will also be active on SSB, CW and RTTY during their stay.  Q-S-L to CS3MAD, P.O.Box 4694 -

9000 Funchal -Ilha da Madeira - Portugal.  (OPDX)

**

THAT FINAL ITEM:  MISSING LILLY FOUND

And finally this week, the story of a ham radio operator and his dog.  It happened back in January, but only recently was the story forwarded to us. Here's Amateur Radio Newsline's Bruce Tennant, K6PZW with the details.

--

Peter Kringle K-C-9-B-I-W of Superior Wisconsin tells it this way.  Back in January Peter came home for lunch to find his dog Lilly missing.  She has some how unhooked the standard dog clasp and a locking carabineer.

Peter first walked around the area looking for his dog.  He then got in his car and drove their normal walking loop.  But he was unable to find Lilly.

At this point he began asking people in the area if they had seen her. He found out that she had been seen in the area a few times and that she had escaped around 10:30am.  So Peter called the local dog shelters, leaving a description of Lilly in case some one found her and brought her in.

By this time it was 3 P.M and Peter decided to try something that he had not heard of anyone else every trying before. He turned to ham radio for assistance in finding his mising pup.

Peter picked up his Yaesu VX-5, and called out on the local 146.94Mhz repeater asked if anyone his area could help my look for Lilly.  Two amateur radio operators answered his call.  This meant that there were now two in cars and K-C-9-B-I-W on foot looking for her.  This meant that the searchers were able to cover much more ground in a very organized fashion.

It was just before 4:00 p.m. when one of the hams spotted Lilly and was able to pick her up.  He then called out on the repeater to let every know she was safe.  A bit later Peter was able to rendezvous and take the wandering Lilly back home.  And thats a perfect happy ending to the story and to this weeks newscast as well.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW reporting.

--

Peters Internet positing about the help he received came with an apology.  He wants to thank  the two hams who helped out, but unfortunately he has forgotten their call signs.  He adds that he hopes they will e-mail him so that he can give proper credit where credit is due.  And if you want to see what Peter and Lilly look like, look up KC9BIW om the www.qrz.com website.  (WA9ICU)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). For sale:

(The "Radio Crazy", it's back! Oy vey!)

Part interest in Paducah, KY full-time AM on 1450. 1 KW. 5/8 wave tower! $100,000. Joint venture. (If you venture, you go to the joint! HI!)

Active or inactive investors/saps welcome with at least $15,000 each. All investors/saps would be on the board with full voting rights if desired. Now why in Lord's name would they NOT be desired! HUH!

Paducah is a progressive city of over 26,000 population.

This is a steal.

Tel: (478)741-1710 in Macon, GA.

The "Radio Crazy" ain't THAT crazy! He was Chief Engineer for a NYC AM recently and was past President and founder of an FM in San Francisco which is on the air since 1973.

No "AM bashers" or other "negative nabobs", please! Put your cash on the barrelhead Son, no COD, just the entire sum. (Lyrics from old country song!)

Don't let my zany sense of humor fool you. I was once President of a corporation in San Francisco.

73,

Meyer Gottesman, W6GIV

Sounds like a similar size town to Williamsport.

Nice tower.

What else do you get for the money?

Happy to see I am not the only one who noticed this!

I talked with an engineer of one of Birmingham (AL)'s local station groups. He said the interference was giving them fits that day! I knew something was up when I hit the scan button my radio and it passed over all the locals (whose TXs were only four air miles to the north of me), stopping only on Spanish language broadcasts. In this area, the skip was coming from the Brownsville TX / Matamoros TM region.

Murray is probably a little more so. At least its NCE-FM station is
not an evangelical satellite repeater.

Paducah is just across the Ohio River from the worn-out, dirt-poor
coal-mining areas of southern Illinois.

This station does need some work.  (it could be as simple as someone
properly adjusting the fader!)  I was in Paducah yesterday and would
estimate the modulation at about 50% or so.  Haven't checked for coverage.

There are far less economically-viable towns in Kentucky.  In general,
the western part of the state is considerably more prosperous than the
eastern.  Paducah is the "jumping-off point" for the Land Between The
Lakes recreational area, though a Class C AM there isn't going to cover
the tourist area itself.  (at least not at night)  On the other hand, it
also isn't going to cover any of the seriously depressed towns of
southern Illinois!

For what it's worth, the car radio scan stops on five AM stations, (two
of which are daytimers) four non-commercial FMs (one of which also has a
translator there), and eight commercial FMs.

Looking for info on the going rate for tower work.  (ie. light bulb changeouts, coax runs, etc.)  Is it usually by the hour, by the foot, or both?

Thanks

New Jersey's longest-running AM Stereo station, 930 WPAT in Paterson, is now the first in the state -- and the second in the New York City area -- to begin testing iBiquity's IBOC/"HD Radio" digital AM system.

Listeners to 930 WPAT may notice a quieter, duller signal, with less loudness and reduced treble response as compared to when WPAT was broadcasting a conventional analog AM signal.  And since IBOC and AM Stereo cannot be transmitted at the same time, WPAT can no longer be received in Stereo during daytime hours when the IBOC digital signal is active.  Also, the digital data sidebands -- that now extend all the way from 915 through 945 kHz on the dial -- will now cause a constant "hash" or loud static type of noise to nearby channels such as 910, 920, 940, and 950 kHz, as well as a constant hiss in the background of 930 WPAT's own signal.

The neighboring stations most likely to be affected by WPAT's use of IBOC include:

910 WLAT New Britain, CT

910 WRKL New City, NY
920 WGHQ Kingston, NY
920 WPHY Trenton, NJ
940 WADV Lebanon, PA (AM Stereo)
940 WINE Brookfield, CT
950 WPEN Philadelphia, PA (AM Stereo)
950 WHVW Hyde Park, NY

At my location in Somerset County, NJ, I hear WPAT's digital signal causing a constant hiss in the background of 910 WRKL and 950 WPEN, as well a loud "hash" on 920 kHz that severely degrades my reception of otherwise perfectly clear WPHY, to the point where WPHY's signal is only marginally intelligible.  The "hash" on the other side of WPAT's signal also prevents any chance of being able to receive 940 WADV.

And as for 930 WPAT's signal itself, they are definitely "quieter" than before. In fact that's how I first noticed that WPAT was broadcasting the IBOC digital signal; on my car radio this afternoon, they seemed suspiciously weak and lacking in crispness, and did not switch my radio into AM Stereo mode as normal. Anybody with a good-quality AM radio will notice that WPAT's audio is now being limited to a telephone-like 5 kHz bandwidth, in order to accomodate the IBOC digital sidebands, which may be heard as a constant raspy hiss in the background, just as from 710 WOR's IBOC signal.

For better or worse, the IBOC/"HD Radio" digital AM system is currently only approved for daytime use.  After sunset I will have to check if WPAT resumes broadcasting a full-bandwidth AM Stereo signal or not.  The official sunset time is 8:30 PM, at which point WPAT's digital signal has to be shut off, per FCC rules.

At this point, no "HD Radio" receivers are available yet, and only a handful of stations across the country are transmitting IBOC digital signals on the AM band.  930 WPAT has now joined their ranks, but it remains yet to be seen if this is just a testing period or if WPAT intends to implement full-scale use of the IBOC digital signal.

Just wanted to post that I bought one of the Pogo RadioYourWay units and it works pretty much as advertised with lots of functionality with it's ports for firewire, line in, mic in, phones out, SD memory card, cord adapter, etc.

http://www.radioyourway.com/

The only things I'd like to see improved are:

1) Possible higher bitrate capture for better quality(currently the options are 16kbps and 32 kbps, better for talk radio than music).

2) A resume function after powering down so I don't have to fast forward to where I left off in a 30 minute or longer recording.

3) A feature to let me listen to playback while still recording a show(so I can listen from the top while the device captures the rest of the live broadcast).

Other than that I couldn't ask for a better product.

Jeremy

With WOR I was unable to tell what the IBOC signal sounded like because their signal was so strong I could receive it on my teeth. WPAT is far weaker and I hear the same thing you hear from 910 to 950. On my receivers it sounds like square waves and buzzing on either side. Hash lower and buzzing upper. Beyond 960 all is quiet so it isn't dimmer or power line noise.

I read the letter you sent to Mike. As a long time Talk Radio programmer I can tell you letters like yours, filled with vitriol, aren't taken very seriously. Had it been civil and well reasoned that would be a different matter.

Thanks for the info. I have been thinking of getting one of those.

Can you set multiple timers for differant stations?

The FCC has an official modulation type for dimmer noise, A6 or something. As a format it manages about a 2.3 share if you don't pack it with too many commercials.

Mr. Thorn has apparently tried to make a career out of being a "thorn" (so to speak) in Mike Gallagher's side.

Mr. Gallagher made one mistake...when Victor called him once or twice, he reacted to him on the air and probably gave him more attention than he deserved.  Victor has apparently seen that as an "entree" and is trying to ride the "Mike Gallagher Gravy Train" to draw attention to his own efforts (a Webzine, it appears).

If Mike Gallagher went off the air tomorrow, Victor would be upset, because the Gravy Train would end.  He'd have to go find another nationally syndicated talk show host to bug, and try to get attention from.  Simple as that.

Mike

IMHO this confirms what many of us believed from the beginning; IBOC is incompatible with analog AM.  When HD stations start stepping on local AM second-adjacents, the time has come to re-think IBOC.

P.S.: read again
"as well as a constant hiss in the background of 930 WPAT's own signal."

There is no better proof that AM-IBOC is incompatible with regular AM radios.

It's 10:30 PM and WPAT is not in stereo, and still sounds bad.  I live
in Oradell NJ,
exit 165 off the GSP.

If you can't get enough of WPAT's noise-generating IBOC signal, try 1480 WZRC. As of 2:00 PM on Thursday afternoon, the IBOC was turned on at that NYC station as well. Listeners of 1500 WGHT -- whose transmitter is only 17 miles away from WZRC's -- will definitely not be pleased when they tune in 1500 AM and hear a constant "HISSSSSSSS" in the background. Yes, IBOC is currently daytime-only -- but so is WGHT itself (to accomodate WTOP at night), so there's no escape!

Furthermore, 930 WPAT is a hodge-podge of time-brokered ethnic programming, and 1480 WZRC is all-Chinese. Exactly what is the point of broadcasting these zero-ratings, zero-advertiser, zero-listener formats in IBOC digital?? And as for 710 WOR, most of its 85-year-old listeners probably don't even know what "digital" means. Regardless of its technical flaws, IBOC might have a chance if they put it on something like Radio Disney (1560 WQEW), as an attempt to attract more younger listeners to the AM band. Otherwise, it's just being wasted on the type of listeners who haven't bought a new radio since 1974.

So Infinity should replace the transmitter at Blink 102.7 with a really big dimmer switch if they want to improve ratings?

Yes, there are ten timer events total you can set with each event being AM/FM choice of station with a daily or weekly scheduled time. It powers itself on and off so you can set and forget.

The only couple of other things are the included earphones(or really any earphones) you plug into the 1/8th inch jack act as the antenna, so you have to leave them plugged in to get reception.  Also the included 32MB of internal memory at the 32kbps rate only gives you about 2 hours of record time - I went ahead and picked up a 256MB SanDisk Memory Card for $110 at BestBuy which pushes it out to around 17 hours recording time.

```

Criteria are good dynamic range(not over-compressing), limited or no use of EQ and special fx(echo, verb, stereo expanders).

I'm in Stamford, CT, so the best sounding stations I pick up are 95.1 WRKI up in Brookfield, CT, 96.3WQXR classical - NYC,  99.1 PLR in New Haven, Q104.3 from NYC, and 106.7light FM, Lon GIsland.

The above stations prove that FM can sound good, and they also play their music at the correct speed, in stereo, and without editing out good bridges and solos from songs.  Their volume is a little softer than, say, Z100 or KTU, because they don't compress near as much as those two stations.  But their true fidelity makes them worth cranking up.

This "Thorn" character is all but walking around with a "LOOK AT MEEEEEEEEEE" sign around his neck.

The funny thing is...Mike Gallagher's audience is relatively modest in the world of nationally syndicated talk.  If someone like a Rush Limbaugh paid even the slightest attention to Mr. Thorn, he'd likely have a heart attack from all the excitement.

Mike

Listers,

Please forgive this somewhat "off-topic" post, but I know there are a few Amateur Radio operators on this list. Since I consider this announcement important, I hope that you will bear with me for this one posting.

Regards,

Paul.

-----

Fellow Operators and Radio Enthusiasts,

I have created a new list that deals specifically with legal issues pertaining to our hobby, the Amateur Radio Legal Issues List. The list is for the dissemination and discussion of legal issues (such as PRB-1 and pending legislation in Congress) and other related issues (court battles, etc.) that can affect our hobby.

If you are interested in such a list, you may send a blank email to ARLI-subscribe@topica.com.

73's,
Paul Gray, N0JAA
Moderator, Amateur Radio Legal Issues List

I've never even *heard* of Gallagher until just now.

Who are the current top-10 talk shows? It's probably something like
1. Rush
2. Laura
3. whoever replaced Art Bell
4. Howard Stern
5. Bruce Williams(?)
6 ...

>
> Mike

[ Moderator's Note: There IS a Mike Gallagher working for Clear Channel in Cleveland, but he is a jock, not a talker. The Gallagher in Cleveland has been there for years and I've never known him to do talk radio. ]

Amateur Radio Newsline™ Report 1353 – July 18, 2003

Amateur Radio Newsline report number 1353 with a release date of Friday, July 18th 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

WRC 2003 says no more Morse but it may be years before codefree operation comes to the USA. Find out why on Amateur Radio Newsline report number 1353 coming your way right now.

(Billboard Cart Here)

**

INTRODUCTION

G'day and welcome to the first Amateur Radio Newsline report ever recorded in Australia. I'm this weeks host Graham Kemp, VK4BB, at the Q News studios in the city of Brisbane. And our first story as you might expect has to do with WRC 2003.

**

WRC FALLOUT: S.25 AND A CODEFREE USA

The now concluded World Radiocommunications Conference may have rule that Morse Code is no longer a world standard for getting a high frequency ham license, but don't expect it to disappear very quickly in the USA. That's because there's lots to be done by Congress and the FCC before any action can or will be taken. Our team coverage starts here:

--

I'm Bruce Tennant, K6PZW in Los Angeles.

The International Telecommunication Union has dropped the international requirement that amateurs operating below 30 MHz must first pass a Morse code exam. According to the CQ website, this was among several actions related to amateur radio taken by the World Radiocommunication Conference and reported by the International Amateur Radio Union. The change took effect on July 5.

According to the IARU, the new language of International Radio Regulation Article 25.5 now reads: "Administrations shall determine whether or not a person seeking a license to operate an amateur station shall demonstrate the ability to send and receive texts in Morse code signals."

This leaves the question of requiring a code test optional for each government licensing authority. According to an IARU explanation, several countries still feel the code is important as a license requirement and wanted to be sure that any country dropping it did so via what it called a positive decision not to require Morse.

In the United States, FCC rules continue to require passage of a 5 word-per-minute code test for access to the amateur bands below 30 MHz, although it is widely expected that opponents of the code requirement will quickly file petitions with the FCC to drop it.

How long will it take? Amateur Radio Newsline's David Black, KB4KCH, has that part of the story from our South East bureau in Birmingham Alabama.

--

Nobody can be quite certain when or even if the Morse requirement will disappear in the United States, but here's the way it has to play out thanks to the way our government works.

Since the agreements reached at WRC ‘03 are essentially an international treaty, the document has to be ratified by the United States Senate.  Depending on their workload, that could happen before years end or it could be put off into the 2004 session or even beyond.

Senate approval has to take place can the FCC begin the process under the Administrative Proceedures Act and issue a Notice of Inquiry.  A Notice of Inquirey or N-O-I is the first step in the rule making process to make any change and gives the general public a chance to voice its opinion. And by public we mean every American.  Not just ham radio operators.

If there is enough interest shown in going ahead then a Notice of Proposed Rule making will be issued that again invites public comment.  This will be followed by another time period for reply comments by those who might have arguments to counter what some initial commenters have to say.  Then matter goes to the staff to prepare a Report and Order or Memorandum, Order and Opinion that is circulated to the five Commissioners who run the agency.  If they approve, then the change become law on a date specified in the document.

So once again the rhetoric question of how long?  Here’s our guess.  About two years minimum from the time the Senate ratifies the accords, but only if the FCC decides to proceed immediately there after.

Why two years?  Well as Fred Maia W5YI of the NCVEC pointed out to us, since Novice Enhancement some two decades ago, just about every major change in the structure of ham radio has taken about two years.  Fred is a pretty good Washington watcher and his guess is 2005 at the earliest.  But for now, we will all have to just wait and see.

For the Amateur Radio Newsline,. I’m David Black, KB4KCH, reporting.
Graham..

--

As we go to air, the ARRL Board of Directors is meeting to discuss the WRC ‘03 agreement and its impact on the U-S Amateur Service.  Next week the people who give ham radio tests -- the VEC’s will be meeting with the FCC to do the same.  (IARU, ARRL, CQ, FCC, ARNewsline(tm))

**

WRC FALLOUT:  SWITZERLAND GOES 100% NO-CODE

Meantime, Switzerland may be the first country in the world to take advantage of the revised Radio Regulations.  According to the website of the Swiss national amateur radio society, the licensing authority there will be writing to all Swiss CEPT Class 2 amateurs to give them "provisional authorization" to immediately start using the High Frequency bands.

Meantime the Radio Society of Great Britain says that nations Radiocommunications Agency has already stated that it will bring in code-free

High Frequency licences as soon as it is practical to do so. An announcement will be made as soon as permission is given for United Kingdom Full and Intermediate Class B amateurs to start using the H-F bands. (RSGB)

**

WRC 2003 FALLOUT: IMPROVED EMERGENCY COMMS - WORLDWIDE

Ham radio emergency communications also got a boost at WRC ‘03. Jeramy Boot, G4NJH, is in Nottingham England with more:

--

Paul Gaskell, G4MWO, the RSGB Radio Communications Voluntary Services National Co-ordinator, has pointed out the enhancements to amateur radio emergency communications that have come about due to the revision of Article 25 of the ITU Radio Regulations.

Article 25.3 now reads: "Amateur stations may be used for transmitting international communications on behalf of third parties only in the case of an emergency or disaster relief. An administration may determine the applicability of this provision to amateur stations under its jurisdiction."

This is a notable change from the old wording, which was: "It is absolutely forbidden for amateur stations to be used for transmitting international communications on behalf of third parties."

Paul says, "A completely new regulation, Article 25.9A, has been approved, a provision which needs no explanation: It reads: 'Administrations are encouraged to take the necessary steps to allow amateur stations to prepare for and meet communication needs in support of disaster relief.'"

It is hoped that administrations will make regulations that facilitate amateurs preparing for emergency situations and providing communications in emergencies and for disaster relief. This was an important IARU objective.

Jeramy Boot, G4NJH

--

Reports from the 2003 World Radio Communications Conference and its impact on Amateur Radio can be found on the IARU website. Its in cyberspace at www.iaru.org. (RSGB)

## THE WAR ON TERROR:  FCC ESTABLISHES OFFICE OF HOMELAND SECURITY

The FCC has taken another important step in helping to fight the war on terrorism.  This as the agency names James Dailey as Director of the its newly established Office of Homeland Security.

Operating under the Enforcement Bureau umbrella the FCC Office of Homeland Security will deal with many emergency related issues including those involving Amateur Radio.  It will also oversee the establishment of an Emergency Relocation Board  or E-R-B.  The E-R-B will deal with the evacuation of FCC headquarters with little or no advance notice as well as overseeing the relocation of selected FCC staff members.  More is on the web at:
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-167A1.doc and
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-236436A1.doc (CGC Communicator)

**

## RADIO LAW:  AB-1228 SIGNED BY GOVERNOR

California hams now have their own PRB-1 “like” protection.  This as Governor Gray Davis signs Assembly Bill 1228 on Monday, April 14 th.

Assemblyman Bob Dutton and his staff shepherded the measure through the Local Government Committees and the floors of both houses of the legislature.  It eventually passed without a single dissenting vote.  The new law officially recognizes the doctrine of Federal preemption as outlined in  PRB-1 over Amateur Radio antennas and their support structures as now being California state law.

In his cover letter to the California Legislature, Governor Davis took time to acknowledge the numerous Californians who are licensed amateur radio operators.  He said that each year these volunteers give thousands of hours of service to the state and local governments.  He added that since the September 11, 2001 attack on America, the state has also have come to rely on them and appreciate their commitment to the security and well being of all those living in the state.

California is the 20th state in the nation to adopt PRB-1 like ham radio anenna legislation.  (ARRL SW Div. Bulletin)

**

## RESCUE RADIO:  RACES VS. FIRES ON THE 4TH

Radio Amateur Civil Emergency Service volunteers acted as dispatchers for the Huntington Beach, California, Fire Operating Center over the July 4th holiday weekend.  Operating from the city’s Central Net Training Center, eleven members of the towns own Radio Amateur Civil Emergency Service took incoming fireworks related calls from the public, verified addresses, and dispatched the appropriate fire patrol arson investigator teams.

But thats not all.  Two communications volunteers were also assigned as spotters on the roof of City Hall.  Two other hams got the experience of a lifetime when they lucked out and were attached  to the Huntington Beach Police Department eye-in-the-sky helicopter.

Equipped with digital cameras interfaced to two-way ham radio gear, the field team transmitted live slow-scan television images from their lookout locations to the Fire Operating Center and the Huntington Beach Police Department sub-station command post.  Glorria Morrison, who is the city's Emergency Services Coordinator said that everyone is proud to have such an extensive network of dedicated and skilled communications volunteers in Huntington Beach.  (KH6WZ)

**

## RESCUE RADIO:  VARACES PULLS OUT OF VA STATE EOC

Meantime, a big change in emergency communications support has taken place in the state of Virginia.  Amateur Radio Newsline's Don Wilbanks, AE5DW, has the rest of the story:

--

The tug of war between the independent VARACES Incorporated and the ARRL affiliated Virgina state ARES and RACES group has tipped in favor of the ARRL group.  This, according to the latest Repeater Journal that reports VARACES State Emergency Officer Tony Amato, KR4UQ, annouced in March that he and other officers were withdrawing support of operations at the state Emergency Operations Center in the city of Richmond.

VARACES had been providing  staffing  for the E-O-C since 2001.  This following its split from the ARRL after the League's Executive Committee removed Lynn Gahagan, AF4CD, from his post as Virginia Section Manager.  Amato, who had been Gahagan's S-E-C cited difficulty in working with the states Department of Emergency Management Operations Director Fred Vincent.  Amato claimed that Vincent would not make a clear choice between his group and the ARRL.  For his part, Vincent had stated a desire to  work with volunteers from both ham radio groups.

For the Amateur Radio Newsline, I'm Don Wilbanks, AE5DW, reporting.

--

Those leaving have been replaced by a ham radio group organized by the local Richmond Amateur Radio Club.  (Repeater Journal)

## OMARC 2003 TECH CLASSES IN SEPTEMBER

Steve Hajducek, N2CKH, says that the The Ocean-Monmouth Amateur Radio Club of New Jersey will again sponsor Amateur Radio Technician theory classes this fall.  Classses beginTuesday, September 16th at 6:00pm and will continue through November.  All training and testing will be held at the InfoAge Center in Monmouth County, New Jersey.  For more information and directions go to www.qsl.net/n2mo on the World Wide Web. (OMARC)

**

## NEW FOR HAMS: GLOBAL OVERLAY MAPPER

Tim Makins, EI8IC, in County Roscommon Ireland says that what is perhaps the most comprehensive set of world prefix maps ever assembeled is now freely available. This, in the demonstration version in his new Global Overlay Mapper software.

Makins says that Global Overlay Mapper represents a new concept in the field of maps for radio amateurs. That the software is packed full of features for all Amateur Radio enthusiasts, including seven Continental maps, 27 Sub Continental Maps, country outlines, 2204 maps of major cities C-Q zones, ITU zones, time zones and much more.

The on-line demo-version comes with with two fully featured maps to view. Online purchasing of the whole package is availasble in four major currencies. Download for use on your own computer and try it at www.mapability.com or www.qsl.net/ei8ic (EI8IC)

**

## YOUTH RECRUITMENT: SPECIAL OFFER FROM HAMTESTONLINE.COM

The HamTestOnline website has announced its new Youth in Amateur Radio program, which gives eligible school, scouting and youth amateur radio clubs a 50% discount on website subscriptions for students 18 and under.

HamTestOnline says that its offering this discount to support activities aimed at bringing kids into amateur radio such as the ARRL's The Big Project. For more information on the HamTestOnlineT website's Youth in Amateur Radio program, visit www.hamtestonline.com or send an email to K1RV@hamtestonline.com (Press release)

## FOR YOUR READING PLEASURE: UNDERSTANDING, BUILDING AND USING BALUNS AND UNUNS FROM CQ

If you're interested in how antennas work but don't know an unun from an onion, Understanding, Building & Using Baluns & Ununs from CQ Magazine should be part of your ham radio library.

The new book by Jerry Sevick, W2FMI, is the successor to his earlier work, Building & Using Baluns & Ununs. The new edition includes new tutorial material, designs and explanations of how and why they work. And like its predecessor, this book provides a unique opportunity to learn about the application of these devices to dipoles, Yagis, log periodics, Beverages, antenna tuners and countless others.

Interested? You can find out more and place your advance order on line at www.cq-amateur-radio.com. Orders may also be placed by phone -- Monday through Friday -- 9 a.m. to 5 p.m. Eastern time at 1-800-853-9797. (CQ)

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

5 MHZ FOLLOW-UP: OPERATING TRENDS DEVELOP

A follow-up now on what’s taking place on the new domestic United States 5 MHz allocation. As reported last week, opening night on July 3rd saw many stations making rapid contacts and cooperating together for an enjoyable operating experience. Now, according to noted High Frequency back-pack operator Bonnie Crystal, KQ6XA, the novelty of the 5 MHz channels has settled down to a usable level for calling and QSO’s.

Writing to the q-r-zed dot com website Crystal notes that 5 MHz daytime propagation out to 250 miles is good, although summer noise limits the comfort level when working the 50 Watt domestic stations. Nights bring good D-X and regional propagation, but lightning storms tend to make it harsh in some areas.

But her most important observation is that of a very positive trend. KQ6XA says that hams still are acting like they are on their first date, treating the new channels appropriately and showing off their best operating habits. She says that they are observing the kind of brevity in operating procedures commonly used on a high-level VHF repeater or regional linked F-M system.

Crystal adds her hope that in the future 5 MHz will continue to be an example of the best ham radio good operating techniques and behavior. From listening on the air, many others appear to agree. (qrz.com, ARNewsline (tm ))

INTERNATIONAL - AUSTRALIA: 5TH ANNUAL IARU REGION 3 ARDF GAMES ANNOUNCED

The IARU Region 3 Amateur Radio Direction Finding Championships will be held Friday, November 28th to Wednesday, December 3rd in Ballarat Australia.

Ballarat is a large provincial city in the state of Victoria. The Victorian ARDF Group, which is organizing the event says that it is expecting up to 100 participants from member societies in IARU Region 3 including Japan, Korea, China, New Zealand, and Australia. Guest competitors from other IARU Regions are also invited to attend in the world-wide Friendship categories.

This years championships are hosted by the Wireless Institute of Australia, with the WIA Victorian Division sponsoring this important event. Full details including competitor and volunteer registration forms can be found in cyberspace at www.ardf.org.au (WIA)

**

AWARDS: WORK A COLORADO MOUNTAIN

Two new awards are now available for ham radio contacts to and from the 14,000-foot mountains of Colorado. The Summit Award is earned by making contact with 10 or more stations operating from the peaks. The companion Pinnacle Award recognizes operation from 14,000 foot summits, requiring radio operation from 5
or more of the peaks.

Award recipients will receive an attractive, colorful certificate with name, call sign and the number of peaks worked or activated on it. A $5 fee is required to cover the cost of the certificate and any associated expenses.

To get yours, first hold the QSO's and then take your web browser to www.Colorado14erEvent.org. Questions should be directed to Paul Ermisch KB0LUR by e-mail to awards@colorado14erevent.org. And colorado14erevent is all one word. (K0NR)

**

DX

In DX, keep an ear open for GM3PPG stroke P to be active on 160 to 10 meter S-S-B from South Uist through August 8th, including the RSGB IOTA Contest on the 26th and 27th of July. The island counts as EU-010 for the RSGB Istands on the Air awards program. (GB2RS)

And R1PQ will be on the air from the Novaya Zemlya Archipelago through the 25th of July. Activity will be on 40, 20, 15 and 10 meters using CW, SSB, PSK and RTTY. The operation commemorates the British, Russian and American polar convoys between 1941 and 1944 and will have two stations active 24 hours a day. (GB2RS)

**

THAT FINAL ITEM: 73 TO THE W5YI REPORT

And finally this week we pause to bid farewell to a competitor and a friend. This, with word that the W5YI Report ham radio newsletter has ceased publication with it's July 15th issue. Bill Pasternak, WA6ITF spoke with Fred Maia whose call sign appeared on the famed publication and they reminisced about the past:

--

The W5YI Report was the last of the paper ham radio newsletters delivered by the postal system.  At one time there were three.  The very first was H-R Report from Ham Radio magazine in 1974.  It was eventually taken over by Burt Hicks, WB6MQV and renamed the Westlink Report.  Hicks ran it for 13 years before closing down in January of 1995.

The ARRL Letter came into being in 1981 as a public version of the previously private ARRL Directors Letter.  It initially dealt only with matters of interest to League members, but over the years has developed into a high quality publication covering every aspect of the hobby with items of interest to members and non-members alike.

W5YI Report was started by Fred Maia, W5YI in the late 1970's.  This, as an information provider to the Richardson Wireless Klub near Dallas Texas.  Other hams who saw it asked Fred to make it available to them:

--
Audio only at www.arnewsline.org
--

Initially Fred did not charge for those who supplied him with self addressed stamped envelopes.  Eventually his subscription list grew to a point where Fred had thousands of envelopes in his home and the numbers were getting out of hand.  So he decided to simplify matters by converting to a paid subscription operation.

--
Audio only at www.arnewsline.org
--

And as soon as word got out that Fred was accepting subscriptions, they came pouring in.  And the rest -- as they say -- is history.

In 2000, Fred sold his company that included the newsletter, but agreed to stay on for three more years with the W5YI Report.  He set this summer for his departure.  July 15th was the publication date he selected and that's now past:

--
Audio only at www.arnewsline.org
--

If you are a paid subscriber to the W5YI Report, fear not.  Fred has you covered.  He has arranged for the remainder of your subscription to be covered by C-Q Magazine based on the value of the remaining portion of your subscription.  And if you already get C-Q, your subscription will be extended by the appropriate number of issues.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, with my longtime ham radio friend Fred Maia, W5YI.

--

And what about Fred? He is not going away by a long shot. To find out what he has planned for his own future and his thoughts on the future of ham radio, be sure to tune into this weeks RAIN Report. Its on-line in streaming audio right now at www.rainreport.com and on the phone at 847-827-7246

>> There is no better proof that AM-IBOC is incompatible with regular AM
>> radios.

> How would DRM (as tested on the shortwave bands) fare?

Well, there's an very interested website concerning this in New Zealand:
http://www.owdjim.gen.nz/chris/radio/DRM/DRM.html

Scroll down to the reception-results to "2003/06/02 03:50". There's an
audio-sample of a DRM signal and a AM signal.

But do note:
- The DRM signal was a signal from the BBC from the transmittor-site of
RCI of shackville; aimed at North America.
- The person who did the recording lives in New Zealand. (which is pretty
far of for a broadcast from Canada into North America).

- The AM broadcast came from Turkey; althou I don't know where it was
aimed. (apparently, according the scedule of the VOT; it was in Turkish;
so it could be directed anywhere).

So the question is of the person would -otherwize, if this would have been
two AM broadcasts, been able to receive anything anyway.

It's a bit difficult to compair local MW broadcasting with long-distance
SW.

Cheerio! Kr. Bonne.

Furthermore, WPAT is highly profitable, and the programs serve specialized communities that may have no other source for such programming.

Under this "hodge podge" standard, every TV station in America qualifies; different programs for different folks at different times of the day. It is just block programming. It was also radio's model during its first 30 years.

> Exactly what is the point
> of broadcasting these zero-ratings, zero-advertiser, zero-listener
> formats in IBOC digital??

You are saying Chinese speakers are less likely to be interested in improved audio quality than non-Chinese. Or are you saying they are less deserving? Less worth?

BTW, most of the brokered shows on these stations are chock full of local commercials for community stores, busniesses and services. Such formats don't show in ratings mostly because Arbityron has no Asian interviewers and does not do ethnic weighting for Asians. The staitons have listeners, advertisers and high billings.

> And as for 710 WOR, most of its 85-year-old
> listeners probably don't even know what "digital" means.

You are off by 26 years. WOR's average age is 59.

WABC's average age is 54 and WCBS-AM's is 52.

I happen to be somewhere in that range and digital is very interesting to me. And to many contemporaries I know.

> Regardless
> of its technical flaws, IBOC might have a chance if they put it on

Again, it appears you are saiying that Asina listeners are of no value, or are undiscriminating in taste or unsophisticated. Which is it?

> Otherwise, it's just being wasted
> on the type of listeners who haven't bought a new radio since 1974.

I bought my last one, oh, 3 weeks ago. It is a combined digital recorder, digital playback and AM FM radio with a computer interface for storing MP3's recorded off the air. A scaled version is being readied for marketing to Rush listeners who want to record and listen later; the average age of them is about 57. So much for your theories about technology. You are talking about the generation that grew up with the first transistor radios, avidly took to the cassette medium and rapidly gravitated to VHS, CD's, and DVDs.

Mike Gallagher's syndication is now handled by Salem, and thus, he's ended up on a few of Salem's secular conservative stations in addition to some others.   He airs live from 9-noon ET.  He's even on a couple or three Clear Channel stations - but many of those who had him on went with CC/Premiere's Glenn Beck in that slot instead.

He's popular in places like Greenville/Spartanburg, SC, where he worked as a local host... but here in NE Ohio, he's carried on two stations - live on Salem's new Cleveland market secular talker "The Voice" (WCCD/Parma, ex-religious) - a 500 watt station - and WNIR(FM) 100.1 Kent/Akron, which runs him tape delay weekdays 3-5 AM.  In Mike's live slot, WNIR has two long-running local talk programs that aren't going anywhere.

>Who are the current top-10 talk shows? It's probably something like
>1. Rush
>2. Laura
>3. whoever replaced Art Bell
>4. Howard Stern

>5. Bruce Williams(?)
>6 ...

I guess the folks at Talkers magazine would be better off answering this than me... but I believe ABC Radio's Sean Hannity is up at #2 now.  I'm not sure Howard counts, since he's an FM shock jock.  Your #3 above would be George Noory, who is still probably in the top 5 even in Art's absence.  Bruce Williams is now with TalkAmerica, but has basically fallen out of the top echelon of talkers.  (I don't know his affiliate count or listener count these days...but it was somewhat higher in the peak of his talk radio career with NBC TalkNet.)

>[ Moderator's Note: There IS a Mike Gallagher working for Clear Channel
>in Cleveland, but he is a jock, not a talker. The Gallagher in Cleveland
>has been there for years and I've never known him to do talk radio. ]

Steven - what station for Cleveland's Mike Gallagher?  The Mike Gallagher we're talking about is a different person... a syndicated talk show host.  I believe out in your current area, KRLH/590 ("KRLA") San Bernardino probably runs him... probably tape delay nights.

Mike

Howard Stern???  I can't even think where the closest station would be to me
that carries Stern.  How about Hannity, Boortz?

Glad you asked :-) as I've proposed this on alt.radio.digital as IBAC-DRM
(in-band adjacent channel).  If WOR were to stop IBOC and switch to IBAC-DRM
at 720 I believe only that channel (720) would be affected, 700 would be
untouched, 690 & 730 would be completely unaffected and, my guess would be,
710 would continue on at 10kHz without any hash on existing AM radios.

If today's situation is acceptable they could go dual-mode and do another
DRM at 700, giving them the fidelity heard on www.drm.org on their 40kbit
samples.  Again, IMHO, same impact on 700 & 720, none on 690 & 730 and
normal AM on 710.  However, I'm not an engineer and I could be wrong.  Sorry
if I am but please point out where I am.  I'm curious as to how this would
be worse than IBOC.

Your forgetting the great "AMAX" push of the late 90's where frequency
response was pushed to 7.5kHz when the AMs were pushed to 1700.  In a
digital AM world these radios will be known as "AMUD/HASH" as your favorite

stations will be as clear as mud with a helping of background hash added in for that perfect insult to injury.

i cannot believe that it is allowed (fcc rules?) to disturb the regular reception of other AM stations in the locality! why do they let this happen?

Both Stern and Imus are considered talk show hosts. Since any music they
play is incidental, they are not jocks.

Per Talkers, the top shows based on cume are:

```
      1. Rush Limbaugh 14.50+
      2.  Sean Hannity 10.50+
      3. Dr. Laura Schlessinger 8.00+
      3.  Howard Stern 8.00+
      4.  Michael Savage 6.50+
      5. Art Bell - No longer on air 4.00+
      5. Jim Bohannon 4.00+
      5.  Dr. Joy Browne 4.00+
      5. Don Imus 4.00+
      6.  Neal Boortz 2.50+
      6.  Ken & Daria Dolan 2.50+
      6. Clark Howard 2.50+
      7.  Mike Gallagher 2.25+
      7.  G. Gordon Liddy 2.25+
      8.  Glenn Beck 1.75+
      8.  Kim Komando 1.75+
      8.  Jime Rome 1.75+
      8.  Doug Stephan 1.75+
      8.  Bruce Williams 1.75+
      9. Tom Leykis 1.50+
      9.  Michael Medved 1.50+
      9.  Bill O'Reilly 1.50+
      9. Dave Ramsey 1.50+
      10. Bob Brinker 1.25+
      10.  Dr. Dean Edell 1.25+
      10 Phil Hendrie 1.25+
      10. Rusty Humphries 1.25+
```

The stations that do carry Stern are in larger markets, and have very large audiences.

Will Mr. Gottesman be kind enough to identify    that NYC radio station
where he claims to have been chief engineet. This would be for reference
purposes only. Donny

>> Furthermore, 930 WPAT is a hodge-podge of time-brokered ethnic
>> programming, and 1480 WZRC is all-Chinese.

Don't forget that the New York Metropolitan area often has more people of a particular ethnic group than their naive counties have. The WPATs of the world are the only place where they can find programming that speaks to them. They lost their major outlet (WEVD) to make room for the third all sports station in the city.

New York has a larger Chinese population than most cities have people. I believe WZRC is Korean.

It was a tremendous improvement in the cultural life of the city. The only sports figure I've seen who makes any sense is Yogi Berra. "When you see a fork in the road, take it." How can you go wrong with that?

If you were to see a man on the street patting his male companion on the butt, what would you think? If you saw one of them bent over with the other with his hands between his companion's legs, what would you think? There are no women around. Yet we spend billions to watch allegedly heterosexual men do the same thing on TV.

Strange.

Rich

Thanks for the review!

I don't understand why the just didn't use the same mp3 encoding
bitrates that their RIPFLASH product has.

How is the MW (AM) reception/sensitivity/selectivity?

Joe E.

http://www.publicbroadcasting.net/wxxi/news.newsmain?action=article&ARTICLE_ID=518563

LOS ANGELES, CA (2003-07-07) In a move skeptics might call a deal with the devil, but those involved see as a match made in heaven, public radio station KUSC today is announcing a partnership with the nation's largest radio company, Clear Channel Communications.

KUSC-FM (91.5) relies on underwriting -- those on-air blurbs saying, ``this program is being brought to you by'' so-and-so -- for 18% of its income, with the rest coming from member donations and grants (the station gets about $400,000 of its $5-million annual budget from the Corporation for Public Broadcasting). But station general manager Brenda

Barnes said her marketing staff is too small and has too much turnover to drum up those sponsorships effectively. So she has outsourced the job to Clear Channel, which owns eight commercial stations in the Los Angeles area and about 1,200 nationwide.

I'm not aware of many people who have faith in the accuracy of this list.

One PD told me it's partly based on a survey card sent to stations, many aren't returned and what is sent back to them isn't verified with actual ratings. Do the syndicators fill in the gaps? They are not known for being trustworthy in this area.

Talkers relies heavily on ads from the syndication firms behind these programs.

One person on this list went up from last year despite losing his major flagship station. He should have dropped based on the loss. The minnows he picked up elsewhere wouldn't have been a drop in the bucket compared to the huge hit taken.
The syndicator behind the show is a heavy advertiser in Talkers.

I also really doubt that Rusty Humphries has over a million listeners given the tiny stations that carry him yet huge ads for his show run in Talkers every month.

There are several others who seem to have inflated figures and at least one (who never advertises in Talkers) who I think is understated.

Yeah, why exactly *did* they buy that station? WHK/1220's signal is
directional into the city, but purchasing WCCD couldn't have helped that.

WMVX/106.5. Weekends, I think, but I can't verify that because their website
doesn't list their weekend personalities.

> Gallagher we're talking about is a different person... a syndicated
> talk show host.  I believe out in your current area, KRLH/590 ("KRLA")

I have a car button set for 99.1 KGGI Riverside, so I would imagine I
should be able to listen to 590 too, though the mountains between me and
San Bernardino might make that difficult. :)

I am only a 25-minute drive from San Bernardino here in my temporary home,
although when I move to the new address advertised in my .sig, I'll be a bit
further out.

> I'm in Stamford, CT, so the best sounding stations I pick up are 95.1
> WRKI up in Brookfield, CT, 96.3WQXR classical - NYC,  99.1 PLR in New
> Haven, Q104.3 from NYC, and 106.7light FM, Lon GIsland.

106.7 "Lite FM" WLTW has commendable dynamic range for a major-market AC station, but their audio quality is let down by the horrible digital compression artifacts in their music, which is stored as low-quality 192 kbps MP2 files on their computer system.  Especially on songs with intense treble content, the "gritty", "sizzly", "twinkly" artifacts are prominent enough that you can even hear them on a clock radio with a 3-inch speaker.  On a hi-fi stereo system, WLTW sounds even worse, as the low-end "grunge" and distortion typical of a clipping-happy Optimod or Omnia become obvious.

Of course, commercials sound the worst on just about all radio stations these days, because of the multiple digital compression schemes they are put through. By the time they get on the air, some sound as bad as a 32 kbps MP3 or WMA file.

Stations that play their music direct from CD and their liners and commercials from carts (yes, I said CARTS), and who don't use any digitally compression in the link between their studio and their transmitter, generally have the CAPABILITY to sound the best, as long as their audio processing is up to par and was adjusted by somebody with an ear for crisp, clear, dynamic sound with accurate stereo, no distortion, and no clipping "grunge".

Of course, there's no reason why *AM* stations can't sound great, either, as long as you're using a high-quality radio, such as the popular GE Superadio III or one of the many car radios with AM Stereo. A well-designed, well-processed AM Stereo signal can easily meet or exceed all of the performance specifications of typical FM stations, and many listeners consider it to sound even better than FM because of the different type of processing that AM Stereo stations use. The CRL "Amigo AM" is the best-sounding AM Stereo audio processor, with the older CRL units a close second. The Optimod 9100 series is also very good for AM Stereo, but tends to lean towards maximum loudness instead of maximum quality.

Here's a little MP3 sample of an AM Stereo station using well-configured CRL processing, as received on a $29.99 Sony AM Stereo Walkman. You may laugh, but I think you'll find the sound to be surprisingly crisp and clear, with good Stereo imaging:

http://tinyurl.com/hmtm

Even better are some of the powerful AM Stereo stations in JAPAN, such as 100,000-watt JOLF on 1242 kHz in Tokyo:

ftp://ftp.amstereoradio.com/airchecks/japan/jolfclip.mp3

Of course, AM and FM's audio quality both pale in comparison to *TV* audio, which at least with all-analog broadcast signals, can sound much better, because there's generally no "loudness wars" on TV. If you have a stereo TV or VCR hooked up to a good stereo system, you'll be amazed by just how good it can sound, particularly for music. TV audio also gives you Dolby Surround Sound from many programs, which is virtually unheard of on the radio (the closest thing were the few "Quadraphonic" FM stations in the '70s).

Dimmer noise has more listeners than Imus does (not that difficult to
achieve, now that I think about it) ---- and certainly is much more
entertaining.

Will Mr. Gottesman be kind enough to identify that NYC radio station where he
claims to have been chief [ engineer ].
>>

Jesus, give Meyer a break.

He's already identified his employers several times, in response to facetious challenges such as yours.

Hint: his former employer was an ex-Class III-A station, and the frequency was between 1280 and 1480.

Gee, now just how many such ex-Class III-As does NYC (and surrounding communities) have?

1280, 1330, 1380, 1430, 1480.

Of these, only 1430 is not licensed to New York City.

Take a guess.

This list, as the heading indicates, is based on cume persons in the most
recent full Arbitron survey prior to its publication. I think it is based on
Summer or Fall 2002. While Talkers admittedly takes some liberty in
"weighing" the numbers, the general picture looks about right.
>
> One PD told me it's partly based on a survey card sent to stations, many
aren't

Do
> the syndicators fill in the gaps? They are not known for being trustworthy
in
> this area.

Cume is determined by Arbitron. Not by stations themselves. You may be
confusing this with the same pubication's list of "most influential talk
shows" which is a horse of a different color, and based on opinion, not
cume.

>
> Talkers relies heavily on ads from the syndication firms behind these
programs.
>
And this does not affect the cume of the stations in the ratings. If the
cume figures are even close to accurate, the relative position and size of
the audience should be reasonably stated.
>
> One person on this list went up from last year despite losing his major
> flagship station. He should have dropped based on the loss. The minnows he

the
> huge hit taken.

There have been no full ratings for the entire US since Savage lost KSFO.
Arbitron ony started releasing Spring, 2003, ratings last week and is only
up to the top 10 markets and thier periphery.

> The syndicator behind the show is a heavy advertiser in Talkers.

And the show was on the air through the last fullly published boo, Winter,
2003.
>
> I also really doubt that Rusty Humphries has over a million listeners
given the
> tiny stations that carry him yet huge ads for his show run in Talkers
every
> month.

It only takes 25 or 30 stations with a cume of 50 thousand to make that figure. It is not hard to fathom.

I work with the syndication of a morning talk show that is on only 7
stations, and yet cumes about 1.6 million. It is really not hard to build
that kind of number. It is getting above 4 or 5 million that gets tough.
>
> There are several others who seem to have inflated figures and at least
one
> (who never advertises in Talkers) who I think is understated.

Still, the list is a good approximation.

Rich Wood, who is more familiar with syndication, can probably contribute
some clarification.

Actually, out of syndicated talk shows, Imus is nationally in the top 10.

Usually, ties would be expressed as 1, 2, 3, 3, 5, 6, 6, 6, 6, 9. In any
case, the rank is theoretically in the right order.

For national shows, cume is the only way of counting.

As another poster mentioned, the methods for adding cume in Talkers are less
than scientific, but are reasonably close and do give an idea of how the
individual shows rank.

> Don't forget that the New York Metropolitan area often has more people
> of a particular ethnic group than their naive counties have.

That must be why we have TWO stations with primarily Russian-language programming (620 WSNR & 1380 WKDM), and if you count a simulcast, TWO stations with all-Polish programming (910 WRKL & 1580 WLIM). But yet, the nation's #1 music format, Country, does not exist on the air within 50 miles of NYC. Yes, yes, yes, people say that there simply aren't that many country music fans within the City itself, and they're correct -- but any decent NYC-area signal will cover plenty of the surrounding suburban areas were there *are* many country fans. "Y-107" proved this, with its lousy-ass signal getting better ratings -- even within the NYC market itself -- than what "Barbie Radio" is getting on a full-power heritage NYC FM station.

> They lost their major outlet (WEVD) to make room for the third all sports
> station in the city.

Well, *second* all-sports station, since 620 WSNR is now only "Sporting Radio News" when it feels like it. (Strange, but true -- a "flagship" station that doesn't carry its own network's programming most of the time.)

> If you were to see a man on the street patting his male companion on

Umm... not that I disagree with you, but what does this have to do with radio?

However, since you got me thinking, could this be the reason why soccer has never been popular in America... because it's not homoerotic enough? :-)

> Strange.

...but true.

Not around me.  When a neighbor installs a dimmer, I offer to buy him a better
one.
The upscale Lutron stuff ($30 and up, not their cheaper stuff) has enough
filtering
stages to suppress RFI in a neighbor's house.  Installed in your own house,
they're still detectable
on the AM band.

I also buy touch lamps.

David, I think the list is miles off, and I know many major market folks who
not only agree but get a lot more worked up about it than I do.

The fatal flaw: Talkers doesn't have access to original Arb numbers for these markets!

They rely on station managers and others for the info. A number of managers don't return the form, in which case, do they just guess? And if they do, the figures provided aren't verified by actual Arbitron data.

>> Talkers relies heavily on ads from the syndication firms behind these
>programs.
>>
>And this does not affect the cume of the stations in the ratings

Again, Talkers doesn't have access to the real numbers. One major market PD told me that he could put down any number and it would be taken as gospel by Talkers because there's no way they would know any better.

>> One person on this list went up from last year despite losing his major
>> flagship station. He should have dropped based on the loss. The minnows he
>> picked up elsewhere wouldn't have been a drop in the bucket compared to
>the
>> huge hit taken.

I wasn't talking about Savage. He's kicking ass in places where I have seen the numbers myself. The loss of KSFO will be made up for very quickly elsewhere.

>> I also really doubt that Rusty Humphries has over a million listeners
>given the
>> tiny stations that carry him yet huge ads for his show run in Talkers
>every
>> month.
>
>It only takes 25 or 30 stations with a cume of 50 thousand to make that
>figure. It is not hard to fathom.

When you're talking about stations this small, most have nowhere near 50k weekly cume. Many are in unrated markets.

Say they have 10k weekly overall. That would be HIGH in many cases. He is going to have a fraction of that number. You're not going to 1.25m without some major stations on your list.

>I work with the syndication of a morning talk show that is on only 7
>stations, and yet cumes about 1.6 million. It is really not hard to build
>that kind of number. It is getting above 4 or 5 million that gets tough.

It's easy if you're on 7 KGO's, KIRO's, WABC's, KFI's, etc, but I think you need to see just how tiny these "markets" are. 200 of those won't add up to half of a WABC. Ever hear of Paintsville KY? Alturas CA? Austin NV? The Dalles OR? There are talk stations in SMALLER towns than these!

>Rich Wood, who is more familiar with syndication, can probably contribute

>some clarification.

We'll see what he thinks, but I saw him making some of these points about one of the hosts on the list earlier this year.

And their number ranking system makes no sense plus those approximations are spaced pretty far apart at a quarter million at a time.

I'd say the list looks about right to me. at least the top 10. The most interesting list will be the next one once Michael Savage's major losses (KSFO and WABC) are factored in. I think you'll se a very dramatic loss. KNEW offers no competition to KSFO. It'll take decades to equal the KGO/KSFO influence on San Francisco. KGO just reached its 100th straight book as #1.

>> I also really doubt that Rusty Humphries has over a million listeners
>given the tiny stations that carry him yet huge ads for his show run in Talkers
>every month.

Talk Radio usually has a long growth period. Humphries hasn't been syndicated long enough, in my opinion, to make significant inroads.

>> There are several others who seem to have inflated figures

Don't ever, ever believe what you read in ads or press releases about syndicated programming. One small network claims more than 100 stations for a show that's actually on 3. It claims 500 affiliates. Not a chance.

At WOR I was very careful about reporting affiliates. If a station carried one show it was one affiliate. If it carried 11 shows it was still one affiliate.

Some networks would report those 11 shows as 11 affiliates. You can legitimately add their AQH for all shows but they're still one affiliate.

Also, watch out for ads that claim percentage increases in audience. "Buford Pudwallop has increased WXXX's audience by 400%." Generally they don't tell you that WXXX had a .1 and, even with the 400% increase barely makes the book.

Since syndication is sold on average quarter hour, that's what I want to see, not cume, percentage increases or station counts. Show me the numbers you can actually take to the bank (ad agencies).

Some smart advertisers request "posts" or post audits to make sure of the audience and that stations actually ran their spots. Stations return affidavits as proof that they ran the spots. An advertiser will request, let's say, 2 weeks worth of affidavits. The network scrambles to call the stations that haven't returned theirs so they get the most accurate account. That's where the rubber meets the road. If the network claimed 500 affiliates and they can only account for 100 affidavits, something's wrong. The sales rep will then rerun the numbers based on the actual returned affidavits. The advertiser will either feel duped and request additional spots or cancel, altogether.

>TOTAL BROADCAST STATIONS 26,419<

We sure have come a long way from the concept of about 80 years ago, when the government figured that 15-20 high-powered AM stations (back when AM was all there was) would be all the broadcasting that the US would need.

Word on the street is that Paul Allen is desperate to find a greater fool to take the station off his hands. That's why they're brokering it out -- it wasn't making them anything running SNR, and they want to get it billing *something* in order to get a decent sale price. (Is Arthur Liu full up yet?) I think the last SNR O&O that is still running SNR programming full-time is WWZN Boston, and rumors are swirling over programming changes there, too. (And Boston probably costs as much to run as Newark does, thanks to some poor decisions made by a previous Greater Fool.)

>

It depends on how badly CC wants KNEW to succeed. If they really put some effort (marketing money) behind it, it could have a chance.

But Savage alone won't be enough and most of the rest of the current lineup is probably temporary.

KSFO is in good shape as long as it has Rush but needs some freshening up elsewhere. It just took a big hit in San Jose and other outside markets and a small one in SF. Interesting to see what will happen.

>Don't ever, ever believe what you read in ads or press releases about
>syndicated programming. One small network claims more than 100
>stations for a show that's actually on 3. It claims 500 affiliates.
>Not a chance.

Exactly. Here's another scam: claiming in ads that you are cleared in San Francisco, when your affiliate is in Napa or Santa Rosa, etc., or your "Seattle" station actually in Port Angeles. I've seen this in trade ads.

>Also, watch out for ads that claim percentage increases in audience.
>"Buford Pudwallop has increased WXXX's audience by 400%." Generally

Yes, and what demo are they using? Men 85+? They don't always tell you.

I don't believe they're correct. WYNY had some pretty decent numbers
as a Country station, if I remember correctly. I think there's a great
opportunity for Country here. I believe it's a sales and ego problem.
If I owned WLIE on Long Island it would go country in a heartbeat.

I really has more to do with TV. Actually, Soccer is very homoerotic.
They wear skimpy shorts and often get them pulled down during play.
Soccer players seem more physically comfortable with each other than
American players. They don't seem to care what anybody thinks.

Lately, it seems American players have to abuse or rape women to show
their heteroseuality. I was going to say manhood but real men don't
rape women..

_______________________

As far as TV goes, the music video channels have done exactly what the major market FM radios have done: dynamically compressed the crap out of their audio.  This wreaks havic on matrix surround decoders such as Pro-logic, because the phase differential requires significant amplitude to be effective. So the front-to-surround signals just seem to "bllllend" together, what I call "Velveeta surround"!

Most stations playing movies, OTOH, arent too bad in that respect, and PPV blows me away!

> Stations that play their music direct from CD and their liners and commercials from carts (yes, I said CARTS), and who don't use any digitally compression in the link between their studio and their transmitter, generally have the CAPABILITY to sound the best, as long as their audio processing is up to par and was adjusted by somebody with an ear for crisp, clear, dynamic sound with accurate stereo, no distortion, and no clipping "grunge".
>
> Of course, there's no reason why *AM* stations can't sound great, either, as long as you're using a high-quality radio, such as the popular GE Superadio III or one of the many car radios with AM Stereo. A well-designed, well-processed AM Stereo signal can easily meet or exceed all of the performance specifications of typical FM stations, and many listeners consider it to sound even better than FM because of the different type of processing that AM Stereo stations use. The CRL "Amigo AM" is the best-sounding AM Stereo audio processor, with the older CRL units a close second. The Optimod 9100 series is also very good for AM Stereo, but tends to lean towards maximum loudness instead of maximum quality.
>
> Here's a little MP3 sample of an AM Stereo station using well-configured CRL processing, as received on a $29.99 Sony AM Stereo Walkman. You may laugh, but I think you'll find the sound to be surprisingly crisp and clear, with good Stereo imaging:

>
> Of course, AM and FM's audio quality both pale in comparison to *TV* audio, which at least with all-analog broadcast signals, can sound much better, because there's generally no "loudness wars" on TV. If you have a stereo TV or VCR hooked up to a good stereo system, you'll be amazed by just how good it can sound, particularly for music. TV audio also gives you Dolby Surround Sound from many programs, which is virtually unheard of on the radio (the closest thing were the few "Quadraphonic" FM stations in the '70s).

------------------------

So digital is the "devil in the details" with regards to FM. Interesting. I mean, after all you folks know I am the Anti-Digit! If the whole world just stopped with CD that would be just fine. Next thing you know, the BEEP-BEEP of our alarm clocks will have to be digitally processed! Sad.

KNEW does not cover the entire market, so it is totally crippled at the
offset.

> KSFO is in good shape as long as it has Rush but needs some freshening up
> elsewhere. It just took a big hit in San Jose and other outside markets
and a
> small one in SF. Interesting to see what will happen.

San Jose is an embedded market, as is Santa Rosa. Both are using very small numbers of diaries, and tend to wobble; San Jose is about a quarter Hispanic, so that causes the non-Hispanic population figures to be less reliable. The SF numbers include both of these markets, and no other market is significant for KSFO... as in producing sales (althought they were up a tick in Monterey). In fact, in SF, the station was well within its range of the last 10 books in the just-released Spring 2003 estimates.

KSFO has been 5.0, 4.1, 4.2, 4.0 5.7, 4.0 in the last 18 months in San Jose. The aberration is the 5.7, not the 4.0. The station did not take a big hit... it actually got a big kiss 3 months ago. It's in range, that's all.

The SF market is so geographically large, only a couple of stations fully cover it day and night, and those are AMs like KNBR... even KGO loses a piece to the E when they go directional at night. KNEW is not one of the signals that can claim near complete coverage.

Below certain billing levels, the value of stations like this is based, like lobsters in a restaurant, on "makret price." No sane person would keep the current programming, so billing is not material. The old day formula of 2.5 times billig or 8-10 times BCF are long gone.

Example: inferior, basin-floor limited Class B KFSG (now KXOL-FM) in LA with no billing and a must-change format: $250 million.

www.allaccess.com, but you have to register. Many who are not in radio use
"creative thinking" to register.

222.rronline.com is free, no registration and has the 12+ summaries each
afternoon when they are released.

For sale:

Partial ownership (Joint venture....if you venture,
you land in the joint! Hi!)

...of AM radio station in Paducah, KY. Full price is
only $100,000 for a fulltime Class IV AM in a city of
over 26,000 population. On the air since the late 50s.

No real estate included.

Active or inactive investors with at least $15,000 each are welcome. All investors would be on the board with full voting rights if desired. No individual (including me!) can own more than 49 percent! This is not Iraq!!!!

No "AM bashers" or negative nabobs, please!

Tel: (478)741-1710 in Macon, GA or email.

73,

Meyer Gottesman, W6GIV

As for Canada ... we also have one of the highest tax
burdens in the industrialized world.  The governments (at
all levels) in Canada really need to consider cuts.

Unless you are claiming the rock music is evil and the cause
of all the tradgedy, then I consider all of the above stats
irrelevant. If however, you are claiming that rock music is
itself evil, then the burden of proof is yours to
demonstrate it (e.g. how do I know that rock musicians who
overdosed weren't just stupid folks with more money then
they knew what to do with? If so, why should this discredit
rock music?).

Damn right it is.  If it weren't for our military, the people of Western
Europe would today be speaking German or Russian.

about
> > equal their whole program bandwidth, I suspect.
> >
> Are you saying each channel is only 56kbit?  I thought both XM & Sirius
were
> 64kbit?

I said no such thing.  I postulated the load from a digital service, and
then estimated that it might be ABOUT the same as the program load.

I have no idea how many bits per baud (or hertz RF bandwidth) XM or Sirius
achieve.

I bet real money that the talk channels are allocated fewer bits than the
music channels.  I'll also wager that some music channels are "more equal"
than others when the bits are passed out.
========
As I've also said, XM and Sirius are using advanced processing to "make a
linen purse of quality from a sow's ear of bits".  They have no expectation
of making a silk purse.  They are aiming for good enough for most people,
and are selling primarily on content.
========
If you want to see complaints about digital quality, subscribe to
alt.radio.digital, which is largely devoted to digital broadcasting in the

UK.

Bob C.

That's the nature of "central planning".

Capitalism holds a higher promise though. Wait until the People's
Republic of China symphony orchestra jumps on the capitalist wagon,
and you'll find the 10 CD for 1 buck at the dollar store...

What's better, capitalism or communism?

I worked once as CE for a 50 KW AM in Montana (KERR)
that used an AM Optimod. Alas, they are scare as
"Hen's teeth" on the used market. You will not even
find the commercial firms selling them used, let alone
stations!

Good luck on your search.

73,

Meyer Gottesman, W6GIV
Macon, GA

A friend of mine was recently approached by an internet radio company, voiceamerica, to do a financial planning show. However, he either had to pay to do the show or find sponsors. (We're talking between $2000-3000 for a series of--I think 10 or so--shows.)  I did some searching on the web, but I couldn't seem to find out if anyone even listens to this company's broadcasts, whether it's actually effective as a means of self-promotion, etc.  (I've never heard of it, but it seems to be 2-3 years old.)

Does anyone have the lowdown on voiceamerica?  I'm not in the industry and don't know where else to look to see if its a worthwhile pursuit.

Many thanks!

Dallas

Hi NG,

is there a radiostation from Brunei on the Internet?

Thanks in advance
Henning

At least you are spending it in useful ways, not wars or spaceships to nowhere.
The Swiss got quite small taxes without sacrificing the welfare of the people though...

TAXATION AND SPENDING

The federal government, cantons and communities all levy their own taxes. Each level collects about one-third of total government revenues, which in all comprise approximately 26% of GNP. Most taxes are direct and low. The average Swiss citizen pays about 16% of his income in taxes, and average company taxes are about 20% of profits. Switzerland's national debt and inflation rate are low. Total government spending for all three levels has averaged only 22.6% of GNP since 1946, yet expenditure on welfare and education per capita is high. This is because government revenues are spent effectively rather than wasted on a bloated bureaucracy.

Don't you think they pretty grown up by now to be let on their own?
Why don't you spend the money home in things like education and the
arts, and perhaps you will start see people talking about quality of
life, instead of having some flag-waving, God-blessing apocalyptic
crowd.

FCC Silences Community Radio Station

(Brattleboro, Vermont, USA)  On the cusp of celebrating five years of community radio, the Federal Communications Commission (FCC) unexpectedly entered the studios of radio free brattleboro on Tuesday, June 24th and ordered the station to cease and desist from broadcasting.

The staff of radio free brattleboro (rfb) regrets that its mission of providing a community outlet for alternative music and news is now interrupted.  The staff is considering its options and welcomes public input and comment.

Longtime DJ and trainer Steven Twiss, who coordinates monthly community orientations, remarked, &#8220;it&#8217;s a real shame because in addition to providing entertainment and information to the community, we have trained hundreds of local citizens of all ages in the art of radio broadcasting.&#8221;

Radio free brattleboro has grown in size since starting at the Teen Center in July of 1998.  The studio is currently located on Main Street in downtown Brattleboro; rfb has a staff of about 70 DJs and 50 weekly shows.

The mission of radio free brattleboro is to uphold and exercise First Amendment rights in the face of increasing homogenization of corporate radio.  David Long, co-founder and DJ explained &#8220;we&#8217;re part of national movement to return the airwaves to the hands and voices of the citizens as it was intended under the FCC&#8217;s original mandate.  The Bill of Rights explicitly states &#8216;Congress shall make no law&#8230;abridging the freedom of speech,&#8217; and it is clear to us and millions of Americans that the FCC has failed all of us.&#8221;

To contact radio free brattleboro, please call (802) 258-9879 or email rfb@sover.net. Correspondence and donations can be sent to PO Box 1951, Brattleboro, VT 05302.

*For more information please contact rfb members David Long (w) 802-463-1613 (h) 802-254-7676.  Or Larry Bloch (h) 802-254-9106.

*Please view the Brattleboro Reformer&#8217;s article on the events of 6/24/03.  http://www.reformer.com (article published 6/25/03 is at http://www.reformer.com/Stories/0,1413,102~8860~1478256,00.html)

*A video of the FCC visit of 6/24/03 and a current program guide is available by contacting Radio Free Brattleboro.

Does Brunei, a notoriously conservative monarchy with a strong Islamic culture, even allow public access to the Internet?

IMHO if it's not an outright scam, it's full of baloney. I wouldn't
pay any broadcasting company $3000 without first reviewing an
*audited* ratings survey. Even then, it's listenership as an Internet
station is small as compared to a terrestrial (i.e. free,
over-the-air) station. Even the top 50 Internet broadcast streams do
not have the same reach as a radio station; at $3000 for a brokered
show, your cost-per-thousand is at least 10 times that of a radio
station.

How about getting a license and broadcasting legally?

When I was a shortwave listener back in the 60s there was a shortwave
station on Brunei, though not easily heard in the US.

At google, the government of brunei's url is right there on top. It
would appear that someone has access.

Before your friend plops down good money to do an Internet show he needs to ask the scammers how they'll promote the show throughout the world. Of the thousands of audio sources on the net, how will anyone know they exist without promotion?

I've never heard of them, so it's unlikely I'd search them out to listen to a financial show. I've never seen them promote the service. If they're going to spend that kind of money they should go to a local radio station and buy the time. At least there's a chance someone will listen.

Ha, really strange when you think about it.  "Pirate Station", huh?  Who is the bigger pirate, a small operation serving community needs or big Clear Channel who couldn't care less about community needs?  I would love to see more people using THEIR airwaves to meet the needs of their commnities.  Perhaps it will give Michael "put the airwaves into the hands of a few" Powell a wake up call, if congress won't.

WCBN - 30 Years of Freeing Your Mind - Listen to us online!
=20
WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Today while driving, I was listening to WDOD 96.5 near Chattanooga, somehow they were off the air..and instead there was a Mexican station

taking over the signal, very strong signal, fading and coming back,
then there was another Mexican station in the same channel.By the city
and frequency I found it to be XHRN-FM in Veracruz.It was the same on
other frequencies, like 94.5FM, there were 2 or 3 Spanish stations(One
of those was from Mexico City, Insituto Mexicano de la Radio
XHIMER,playing classical music). Then I moved to 101.7 and there were
another 2 spanish stations there.
Why does that happens and how often? I think it has to do with the
weather being hot and humid.
Any comments about that?

The domain name OFFSHOREPIRATERADIO.COM is for sale.  Accepting offers
at the above email or the fax number below.  Was planning to develop
the site but dont have the time, just trying to recoup some of my
investment.  Priced for quick sale, minimum offer is $150.  The name
has lots of potential.  Email offers to primedomains1@netzero.com.
Serious buyers will receive further direct contact info.  Sales can be
completed through www.escrow.com.

Nice thought, but Congress wrote the laws, and the courts have interpreted them. Fairly recently a court told the FCC that it's rules about multiple ownership couldn't stand up since they didn't provide a legal reason for restricting multiple ownership. Socially good didn't cut the ice in that court, ie: "What basis do you have to claim that concentration of ownership is bad?". With court decisions like that, what would you do if you were on the FCC? [I think I'd resign.]

IIRC, the FCC does not represent itself in Federal court. IIRC the Department of Justice represents all/most Federal agencies. The DoJ can choose to not take on a case, leaving the FCC out in the cold.

So, what local need were the busted station serving?  Did they have credible
local news?  Discussion of local issues that allowed ALL points of view to be
heard?  Or were they just a juke box for "alternative" music?

Yea, what clear channel is doing to local radio is clearly wrong, but two
wrongs don't make a right, IMO.

It's called tropospheric ducting. When a layer of warm air forms above
a layer of cooler air, the boundary can reflect radio waves. This
can temporarily extend the range of FM signals. It is especially

common in summer months and over water. To broadcasters on the coast
it can be annoying, especialy when somebody's country station a
hundred miles away regularly wipes out one's classical station in
its home town.

There's a big difference. Clear Channel has a license. The pirate
doesn't. What they do, with or without a license, is irrelevant when
the FCC comes to add their equipment to their collection.

>The mission of radio free brattleboro is to uphold and exercise First Amendment rights...<

It's almost comical, the number of people who still believe that the First Amendment gives them an unvarnished "right" to operate a radio station without a license.  The Supreme Court stated explicitly, 60 years ago, that that was not the case.  The FCC has been hearing this argument for decades, and it's no less wrong now than it was decades ago.

>The Bill of Rights explicitly states Congress shall make no law abridging the freedom of speech, and it is clear to us and millions of Americans that the FCC has failed all of us.<

"Us and millions of Americans" have apparently never read NBC v. United States, in which the Supreme Court explicitly states that the First Amendment does not apply to radio broadcast licensing procedures.

I've seen the MV Communicator in the harbour of IJmuiden. She needs a lot of painting, to make her look like a 'decent' ship. On board the ship everything is still a mess, but her mast is still right up to the sky. But a working radioship? Not for a long time...

PETER.

What investment? A domain name goes for $35 a year. You're trying to make a profit. What else did you do to make the name worth many times what it cost? Will whatever you've done come with the $150? Have you paid for site development, research, photos, writers, etc?

Sounds like trophospheric ducting, where vhf and uhf signals propagate beyond line of sight (do a search on google for tropospheric ducting for more info that you care to know).

In CC's case, I think it's more correctly called a "Letter of Marque".
A pirate wouldn't have one of them.

The Supreme Court has been known to reverse its decisions when either additional information or time suggests that the original ruling was in error.  So the fact that the Supreme Court made a ruling 60 years ago is not an automatic guarantee that they might not rule differently today.

It would be interesting to see what sort of case could be made before the Supreme Court that the current licensing system unfairly limits freedom of speech by concentrating broadcast station licenses in the hands of an increasingly small group of companies.

While my suspicion is that the courts would toss out that argument pretty quickly, the Supreme Court certainly has issued rulings that have surprised me in the past...the fairly recent past.

Sporadic-E.  (see R.J. Carpenter's links)

On occasion, one of the atmospheric layers responsible for long-distance
reception on shortwave becomes briefly capable of supporting MUCH higher
frequencies, like FM broadcasts.  There are many theories as to why this
happens but none are proven.

Weather is not a cause.  Sporadic-E is more prevalent from late May
through mid-July (and again around Christmas).  It's also more prevalent
in mid-morning and early evening.

The tropospheric ducting mentioned by other posters is almost certainly
NOT responsible for this DX.  Tropospheric propagation is almost never
able to cross mountains, and the 1400-mile distance to Mexico City would
be VERY, VERY unlikely.  Sporadic-E, on the other hand, doesn't have
much grief with mountains.  1400 miles is on the long side, but
certainly possible.

(I had several Mexico City stations in just this morning at my place in
Cheatham Co. about 30mi. northwest of Nashville)

Keep an eye on channels 5 and 6 on a TV with an antenna.  (also 2 and 4
if you're far enough out that WRCB doesn't spill over too much)  The
skip will hit TV first.

Take a look at http://www.anarc.org/wtfda for more information.

I encountered this same phenomenom while driving through South Carolina
during the last week of June. I picked up signals from Kansas and Texas.

There are two types of "weird signals":
    Troposheric ducting, which allows ground signals to extend for hundreds
of miles
    Skip, in which the signals are bounced off an ionized layer in the
atmosphere. Signals over 1000 miles away are propagated this way.

Yes Mark I used to do those news bumpers, but I really enjoyed doing the openings for Marvin Zindler (he was/is a character) and the 3 Oclock Million Dolloar Movie.

I think I was the last major market live booth announcer.

I hate the way things have gone.

Why, they were politically correct fascists, of course.  Nothin' a few
hours of talk radio wouldn't cure.

John

Forgive my (apparent) inferiority but I do recognize
argumentum ad hominem when I see it.  Surely, you can do better?

call visa and tell them of your problem.  they should be able to cancel the
payment which should get the companies attention.

It is better give them a call +44-1535603915 their web address is:
http://www.veronica.co.uk . I have heard  that if you order assimbled
product take about one month to process.

I wasn't speaking out for anyone.

I see that you are known for such quotes as:
"there is not now nor has there ever been nor will there ever
    be, for that matter, a good rock song (by definition)."
       --John Harrington, 2001 November 23

"Rock is crap by definition.  Get used to it."
       --John Harrington, 2001 November 24

I suppose that's what you refer to as 'just the sort of crap the "market" dredges up'  LOL.  Lessee ... you think it is preferable for government to take hard earned money away from rock fans so the government can spend it on promoting the music which is preferred by a few self-styled "elitists", too cheap to pay the full cost themselves for their own pleasures?

>>In spending on the ar<snip>

Yeah, we should have learned from your example and logically assailed
your writing as "politically correct verbiage".

John

The NEW Official Daws Butler Website is now online!!

Completely redesigned by graphic artist Lorie Kellogg, the site is dedicated
to the career of the late voice actor and writer.

Check it out at:

http://www.dawsbutler.com

Daws Butler was the voice behind some of our most beloved cartoon
characters. He was the voice of Yogi Bear, Huckleberry Hound, Snagglepuss
and many more. He worked at Hanna Barbera studios from 1957 till 1988 as
well as working for Warner Bros., MGM, Jay Ward and Walter Lantz. He also
wrote and performed on the Stan Freberg show and the original live version
of Time for Beanie (Albert Einstein and Harpo Marx's favorite show) as well
as acting in radio and voicing TV commercials.

Read about his life, hear rare sound files of the man himself and more!

Henrik,

>call visa and tell them of your problem.  they should be able to cancel the
>payment which should get the companies attention.

It'll get them more than a slapped wrist.

They can have their merchants facility pulled.

Give them a final warning by snail mail and send it registered so it
will have to be signed for.

Good luck

>

I can. When the FCC relaxed the prohibitions on station ownership back in the '90's, that allowed the corporate network robber barons to start buying up all of the independant stations around the country.

Nowadays you can go to any of a hundred major cities and hear the same music in all of them. Gone are the days of the independant radio station with its unique programming, specific to that location.

There are very few independant stations around anymore. Most of the remaining stations are college or non-profit or religious outlets, and most of those are affiliated with NPR.

Paul.

By the way, I was challenged on both of these quotes and defended both in subsequent posts. Nice to see somebody's obsessed enough with me to go investigate me on google groups. Rather flattering, that.

> I suppose that's what you refer to as 'just the sort of crap the "market" dredges up'

If you mean rock. Yup. Rock is crap. Just look at the laundry list of degenerates I posted a few days ago. Still waiting for a response, BTW.

> LOL. Lessee ... you think it is preferable for government to take hard earned money away from rock fans so the

What bullshit. The government doesn't "take" hard earned money, or easily earned money, from anyone.

> government can spend it on promoting the music which is preferred by a few self-styled "elitists", too cheap to pay the full cost themselves for their own pleasures?

If this clumsily loaded question boils down to: do I believe tax monies should be devoted, in part, to preserving and encouraging high culture. The answer is: you bet I do.

Perhaps you'd care to respond to the challenge I posted a few days ago:

Name five classical musicians, most of whom are and have been funded by the "evul gumbint" or by the church, who died of drug overdoses.

At the following URL you will find a table of "rock deaths" compiled by a rock "music" fan:

http://rockdeaths.mybravenet.com/rdl/rlistN.html

It lists the causes of death of what appears to be a comprehensive list of dead rock stars, by name, date, cause, etc. Last I checked, of the 556 deaths listed on this page:

60 are due to Drugs (10.8%)
50 are suicides (9%)
31 are homicides (5.6%)
12 are due to alcohol (2.2%)

All in all, over 1/4 of the rock stars listed died violently or via some form of substance abuse (not including lung cancer, btw). Over 1 in 5 died by their own hand (suicide or substance abuse).

I invite you to compile a similar list of deaths of classical musicians. The table covers 39 years of rock history. If you wish, you may draw your data from the last 400 years of classical history, over ten times the scope of the above table.

Have fun.

> >>In spending on the ar<snip>

On 25 Jun 2003 00:36:47 GMT, Michael Moore <m.moore@utoronto.ca> wrote:

>In spending on the arts there is a kind of organised governmental philanthropy, in the form of handouts to aspiring artists, performers and organizations dedicated to particular types of cultural activity.

You sure of that? In New York I hear people complaining about all kinds of arts. This one didn't get funding while another did. If I have a choice (I don't) between my tax dollars going to another whizbang weapon even the military doesn't want or an aspiring artist, I'll go with the artist and take my chances.

>Official philanthropy tends to be captured by movements and fashions, the ruling orthodoxies of the political class and the bureaucracies which are set up to administer them produce a culture of mediocrity. To expect organised governmental philanthropy to find genius or even outstanding quality is as unlikely as to expect the well-known room full of monkeys with keyboards to write the works of Shakespeare.

I guess that analogy is more appropriate to sports welfare than to real art. Why should my tax dollars subsidize George Steinbrenner when he threatens to take his team to another city if we don't build him another playground? The only art I see in subsidized sports is the stuff painted on beer bellies in the stands. I realize primitive art has its place but the real stuff doesn't usually wash off.

I finally got in touch with someone at Veronica and they will cancel
my order and repay me 80% of the value. Ordered the stuff from NRJ
yesterday and my order is on it's way!

"repay"???

WTF

You got nothing and only 80%??

sounds like a call to Visa to collect 100%

hello,

Forget only 80% - you should claim the lot back via VISA.

The Geneva Concention permits only 3 hours, otherwise it's considered
torture and is punishable by 5 hours of Slim Whitman.

I wish I had the courage to actually use the insults I learned as a
child. They were much more colorful and descriptive than the ones we
use as adults.

Thanks. I needed that.

Same as the 40's and the 50's and the 60's and the 70's and the 80's and the
90's. Heck, hits have been national since the started publishing sheet
music. And now that I think of it, most classical selections were world-wide
hits. And the ballads of the British and French troubadours were national
hits... same the Mexican corridos of the Revolution.

Do you suppose hit songs are, indeed, universal? There is no such thing as a
local hit. Just songs that did not get exposed more broadly.

Subject: WWV Survey
Newsgroups: rec.radio.shortwave
Date: 2001-02-22 08:38:17 PST

Dear SWL:

As you know the National Institute of Standards operates radio stations WWV, WWVH, and WWVB for purposes of providing timely information to the Short Wave Community.

As part of our GAO review process, we are required to justify our continued funding. We ask that you complete the following questionaire and return it to the address at the bottom of the form:

GENERAL:
Your Age___
Your Sex___  (PLEASE, do not answer "three times a week"  or  "yes")
What are your most frequently listened to frequencies (mark '1" for the most used, "2" for the second. and so on)
2.5 MHz ___
5.00 MHz___
10.00 MHz___
15.00 MHz___
20.00 MHz___
25.00 MHz___
60 kHz___
60 Hz___
How much time each day do you listen to WWV, on average?
0-4 minutes___
5-10 minutes___
11-30 minutes___
31-60 minutes___
61-180 minutes___
over 181 minutes___
Do you monitor constantly?   YES NO  (Not more than 24 hrs per day)

What is your age?____
Are you listening to WWV now?___
Are you able to retune your radio?  YES  NO
Are you incarcerated?  YES  NO
(If YES, is WWV being used as part of an interrogation process? YES NO)

Stations WWV/WWVH currently carry additional features, please check those you use regularly:
Propagation Forecasts___
GPS Information___
Weather Alerts___
DEFCON Status___
Sports Scores___
Stock Quotes___
Stock Market Updates___

Casey Kasem Countdown___
Voting in Congress___
Population updates___
Pork Belly Prices___
Time Signals___

What is the longest time you have listened to us in one sitting? ____ Hours
Were you inebriated at the time?  YES NO
Did you enjoy our varied programming?  YES NO
Would you object to commercials from oil companies?  YES NO
If AOL/Time Warner were to provide enhanced programming, would this increase your listening time?  YES  NO

What sort of program enhancements would you like? (check all that apply)
Please remember that each of these items must be less than 55 seconds long.

Poetry___
Short Encyclopedia Articles___
News___
Sports Scores___
Book Reviews___
Paid Personal Greetings ___     (Happy Birthday, etc)
Paid Personals___   (Man seeks Woman, etc)
Paid Obituaries___
Paid insults___
EBay auctions___
Disctionary entries___   (definitions, spelling)
Anti-communist propaganda___
Anti-orient propaganda___
Anti-Aussie propaganda___
Readings from Scriptures___
Love Personals___
UFO Alerts___
Autos For Sale___
Other classifieds___
Capsule Reviews of Shortwave Radios___
Capsule Reviews of Shortwave Antennas___
Computer tips___

What type of receiving equipment do you use to receive our signals?
Tube Home-type Radio___
Tube Communications-type radio___
Portable transistor radio___
Portable tube radio___
Heavy tube radio (over 50 lbs) which I carry around to show off___
Heavy tube radio nobody wants, so I use it for WWV___
Crystal set___
Clock with internal radio which is reset by WWVB___
My teeth___
Homebuilt Radio___

Solid state Communications receiver___

What is your ZIP code?_________ (If overseas, what country?__________)

Do you listen to CHU?
Which Frequency?
3330___ 7335___ 14330___
On a scale of one to 30, which do you like better? CHU___ WWV
family___
Are you Canadian? YES NO

How important is time accuracy? If WWV were to reduce accuracy, costs
would be
lowered and more ancillary services could be offered. Please indicate
level of
tolerance: figures are one part in___/second(10 to nth power)
__10 -12
__10 -8
__10 -3
__10 +2
__10 +30

Accuracy of other services. Please indicate your tolerance for
Sports Scores ___(+ or - 10 points) ___(+ or - 1 point) ___ (exact
only)
Dow Jones Average ___ (+ or - 25%) ___(+ or minus 10&) ____ (exact
only)
Weather Accuracy: 100%___ 50%___ 10%___ -10%___ -50%___ -100%___

Very few people travel to a hundred major cities. Most live in one and are unaware that the same programming is available in another place.

Why aren't we complaining about the even worse duplication of TV programming where everything a network feeds is usually carried by all the affiliates. The "local" stuff that differentiates one TV station from another is the syndicated programming each carries and the couple of hours a day of puffy local news which uses actualites provided by the network.

What makes a station "specific to its location" is not what music (recorded elsewhere) is played but what community services it provides that surrounds the music and talk created elsewhere.

This is the moat clueless statement in this thread yet.

> If this clumsily loaded question boils down to: do I believe tax
> monies should be devoted, in part, to preserving and encouraging high
> culture.  The answer is: you bet I do.

Some brain dead person claimed earlier in this thread that we just had to have taxpayer-supported government radio, or else how would people "learn" about classical music?  You know what?  The other day I went out and *purchased* a 10-CD classical collection, and now I am learning about classical music.  And I am doing it without government subsidy and no burdon on taxpayers.  I *paid* for it and if I like it I will *pay* for more - this is a concept that the elitest socialist left doesn't seem to understand.  To them the purpose of government is income distribution.

That's not much of an investment. Should that be 500 megabucks? gigabucks?
I'll stick with Classic FM here in the UK, can't get short wave anyway.

Take your chances enough that way and you won't have to worry about making choices.  You won't have any.

This situation isn't restricted to just radio, or TV. It is throughout all
of our society! The dumbing down. Earl Nightingale warned "beware of the
dangers of apathy"! The people in this country don't care, or they are
constantly being distracted by the now normal BS, reality TV, etc.

July 5th, 2003 marks one year of streaming for Deeper Into Music. The small, but loyal audience that has gathered around the station had made the huge out-of-pocket expense for this not for profit adventure worthwhile for me. I'd like to invite you to have a listen to Deeper Into Music at http://www.deeperintomusic.net . Here's one way to put the mix into words: 33% college/alternative radio; 33% FM progressive radio; 23% oldies; 11% from the mixed up files of _________. Or some such.
